12. "The RAIN Dial-up" from Chicago
13. FCC Issues 52 1x1 Call Signs for WRTC-96 Next Month
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard each Saturday at 8:00 PM (EDT) and carried on VHF/UHF
repeaters throughout North America and on 160 meters at 1860 kHz.
Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
NOTICE: Negotiations with prospective satellite carriers are nearly
complete. However, a decision on whether the service will be
carried on a "C" band or "Ku" transponder has not been made. I
repeat, a decision HAS NOT been made, despite various postings
on the Internet. A formal announcement, providing full details,
will be made next week. All affiliates will be notified by email,
packet, or landline.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

>How many photons are there in a CW dot?

Divide the product of your transmit power and the dot duration
by the product of Planck's constant and the transmitting frequency
and you'll have the answer.

(Power*duration)/(frequency*Planck's Constant) = number of photons.

In layman's terms, the answer is simply "lots" because Planck's
Constant is a very tiny number indeed.

The discovery of this universal physical constant won Planck the Nobel
prize in 1918. It is basic to quantum mechanics. All energy is composed
of discrete quanta (the smallest possible unit of energy), for EM radiation
we name these discrete quanta "photons".

3523. Assault on Ham Radio - 2m/70cm related to CW !!

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-15 00:00:00 UTC
From: Phil Sussman <pactor@pactor.com>
Message-ID: <31C2ACFB.6733@pactor.com>
Source record: 223018
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc

Amateur Radio is under assault. This is because commercial activities
are recognizing the financial gain that can be realized by using ANY
frequency they can 'lay their hands on'. This includes HAM RADIO
because we are seen as fragmented.

Here is what I mean. There is a move afoot to 'eliminate' CW as a
requirement for Hams worldwide. Of course it started as a 'grass-routes'
campaign somewhere and honestly so. However, some of the people who
are most in favor of it are (you guessed it) 'Commercial interests'.
Now why is that? Simply because if we 'give up' anything, we are seen
as being able to surrender EVERYTHING.

Here are some glaring examples:

1. SPOC (single point of contact) is a recent concept where one
organization or body is responsible for communicating between
members of that organization and other authority. If one were
to 'control the SPOC' (buy it, steal it, or run it) members
could be 'had'. SPOC is a bad idea for hams because it removes
individuals from redress.

2. Eliminate requirements: While it is always best to move with
the times there is a difference between changing rules and
elminating them. It is a double edged sword, if you make it
so much easier for new Ham Operators to arrive on the band,
you also make it that much easier for commercial interests to
gain a foot-hold via that route.

3. Deregulation: Turning certain functions and missions over to
the private sector (coordination, licensing, testing, call sign
assignments, violation monitoring) makes it much easier in the
future for a commercial 'attack' on the need for ANY regulation.
Once that is done the BANDS are ripe for picking.

4. Alternatives: Internet is being touted to hams as an alternative
to Ham Radio. After all any of us over here on Internet are NOT
on ham radio. That's why commercial commnications interests are
so happy to promote Hams moving to a 'higher plane' and off the
hams bands.

Before we surrender CW, or HF, or 2m or 70cm, we ought to THINK
first. That's why after I type this message, I'm going to be on 20m.

My Point: Talk is cheap.. when it comes to Amateur Radio

USE IT OR LOSE IT...

Enough said! 73 from Ohio - de Phil - KB8LUJ

>to deal with bootleg CBers. They certainly don't have that kind of money
>anymore.

I didn't realize we were only talking about errant ops in Hawaii Jeff.

>>There is nothing in Part 97 that tells hams to harrass or interfere
>>with unlicensed or otherwise unauthorized users of our ham bands.
>>We as hams have no enforcement authority just as a normal everyday
>>motorist has no authority to pull over a speeder..and many of those
>>who try end up getting shot, killed or worse...hehehe.

>Harrass? Sending legitimate CQs over an interfereing unlicensed station
>is not harrassment as I see it.

That's just it....as YOU see it Jeff.
I've played the part you are playing right now but with an ARRL
officical (SK now) several years ago. I felt the same way and I still
feel the same way about illegal operations anywhere in our ham bands.
But you don't fight them with illegal tactics.

>Them being on 10m unlicensed could be considered harrassment on their part.

Yeah, but how many people (that you know) just happen to pick a
frequency that happens to be used by unlicensed individuals? Most
bootleggers I've heard are using voice in the cw portion of the 10
meter band anyway. Do you and your friends use voice mode to get
these individuals/groups off of the ham band? Probably and hopefully
not. You send cw (that they more than likely cannot copy) and they
move because they are being interferred with but nine times out of
ten, they move to another frequency in the band. You stated your
friend chases them...didn't you? That is malicious. You have a
license to use the frequency and they don't but when you use it just
to make a point to them....that is malicious...unless they are using
voice in the voice portion of the band there is nothing wrong with
challenging them..but you don't have to interfere with them to do it.

By the way Jeff, how would YOU handle a unlicensed operator in the
phone portion of the 10 meter band?

>And yes, a motorist can make a "citizen's arrest" and detain a person
>suspected of commiting a crime until the authorities arrive.

I hope that motorist has all his ducks lined up [proof, witnesses, etc
because the burden of proof is his] when he does so. We are not
talking just any crime though...I mentioned SPEEDING. If I was
talking about any other crime I would have said so.

>>You stated that the person you know turns on his contest keyer and
>>blasts CQ at them, following them when they QSY. So, what good did it
>>do for him to begin with? They were still on the band...I mean he
>>chased them right? Then they probably moved again...still within the
>>band. So his efforts did no good.

>Lots of speculation there, Jim.

Well Jeff, that is what you told us, isn't it? That is called
deduction not speculation.

> At this time, 10m sounds deserted - unused frequencies are like an invitation
>to bootlegging. Yet if they suspect someone might be out there listening, then
> common sense dictates to stay out of that region. The CQs make the band sound

Since when do these people exhibit any common sense Jeff?

>>You can't scare people off the bands so the best thing to do is to let
>>the FCC do it. They still work albeit in shorter numbers but you
>>still read and hear of people getting busted. That's because those
>>responsible took the correct measures and did not respond emotionally
>>(as many of us seem to do nowadays). It may take time to catch the
>>culprits...if they are stupid enough to use our bands once, they're
>>stupid enough to do it again and again and again. Just ask the ones
>>who have already been caught, prosecuted, and fined.

>Look at where Hawaii is situated, Jim. We're isolated from the enforcement
>you speak of. Our FCC monitoring staff is gone. They left a recorded
>message on their Honolulu telephone that we're to call San Francisco to
>report any cases of interference. The "long arm of the law" isn't 2000
>miles long!

The majority of us on the net are not in Hawaii Jeff but elsewhere. I
would tend to think that Hawaii has its own little problems. The
majority of the U.S. population is on the mainland....and the majority
of the U.S. bootlegging is there also.

>>Jamming or interfering with any communications is illegal...show me
>>where it's not.

>You're burdened in showing *me* where sending a legitimate CQ (with call
>letters) over the top of interfering and illegal comms is itself illegal.

Okay, I'll accept that. I will take that as a challenge and will make some calls that I bet will back up what I am saying. If not, I will say so.

>Let me ask you the following: When a jammer pops up on your local 2m >repeater, do you give him a clear frequency to do his jamming? Seems >to me that if someone keyed over him you would see it as "jamming or >interfering." How about if two bootleggers appeared on the repeater? >Would you QSY to another rptr? Or would you continue to carry on your >QSO over them? Isn't the policy on most machines that of ignoring the >jammer and continue normal use of the rptr as if the criminal isn't >even there? Is that policy wrong?

If a jammer pops up on my local 2m repeater I go out and look for him. I have the equipment and the experience to locate and stop jammers. Just ask anyone who was in the 1916th Communications Squadron at Pease Air Force Base in 1986...or anyone in the world who has an issue of Air Force Communications Command's December 1986 issue of the Intercom, their monthly periodical. The Tech/Sgt who nabbed the Teddy was me. {You'd had to read the article to understand that one}
Or ask any ham in Alamogordo, New Mexico who was there between 1990 and 1993...also any ham who lived in Biloxi, Mississippi between 1981 and 1985. I have all kinds of experience in this matter.

Most people have no training whatsoever in dealing with this type of interference. They take action that is based upon emotional....whatever. Just because we feel very strongly about something doesn't mean that we need to take a vigilantee type of action to solve it does it?

I have to say Jeff that anyone taking the action you would suggest would be just wasting their time. Like I said, you may end up chasing them from one side of the band to the other. The way I do it, they end up paying for it or close to it. The main thing is they DID GET the message.

Jeff, I'd ask you to say hello to my little brother for me. He is in Hawaii with the Army.....I don't know exactly where he is stationed though.

Until next time.

>posting this question. Any ideas?

In vacuum, all EM radiation travels at approximately 186,000 miles per
second, wavelength is irrelevant. In other uniform mediums, IE air,
water, etc, the speed is less. How much less depends on the permittivity
and permeability of the medium. In fact the speed of propagation is given
by

c = sqrt(1/(e*u))

Where e and u are the permittivity and permeability of the medium
respectively (in SI units). For vacuum, the values of e and u are
such that the speed c is 2.998E8 m/s, or roughly 186,000 miles per
second. This relation can be derived directly from Maxwell's equations.

Source record: 223023

In article <4ppjhc$a9h@news.atnet.net> dstites@atnet.net (David Stites) writes:
>I am working on the code to upgrade to tech+ and will need an hf
>radio. The Ten-Tec Scout looks attractive, especially in price. Are
>they as good as the advertisements say?

The Scout is Ok, but it is not nearly as cheap as it first appears.
By the time you buy all the modules, noise blanker, etc that are
sold separately, you'll spend as much as you'd spend for a more
complete radio in the first place. And when you consider the space
you'll need to keep all the band modules, the rig isn't nearly
as small as it first appears either. And of course it is not as
well integrated as other radios.

It also has another strange feature which you may find annoying.
The main frequency control is an analog VFO, but it uses a
microprocessor controlled correction voltage which causes the
radio to periodically "junp" back on frequency as it applies
a discrete correction for oscillator drift.

It *is* a Ten-Tec, however, so it has a robust PA, a good
audio section, and a quiet RF section. Like other Ten-Tecs,
it has good QSK. Aside from the annoying jumps, the VFO has
low phase noise. If you can put up with the hassles of changing
band modules, and don't need solid frequency stability for digital
modes, it is not a bad radio.

Just don't be taken in by the low initial price. Add up all the
options you need to bring it up to full capability before you
compare it to other radios such as the Alinco DX-70 or the IC-706.
Notice also that those other radios offer general coverage receive,
six meters, and in the case of the IC-706 two meters too, while
the Scout does not. But if what you really want is a monobander,
then the Scout looks pretty good.

>In contradiction to this trickery, Webster's clearly states
>that socialism is "a theory of social organization based on
>government ownership, management, and control of the means of
>production AND the distribution AND exchange of goods.

This is only true in regard to Marxist Socialism, not socialism in general. Webster's is hardly the final arbiter of what Socialism is. Using a dictionary to define a complex political term is utterly laughable. I, as one who, among other things, teaches the history of socialism at the college level, am vastly more qualified to define the term than are the editors of your dictionary.

>>Socialists accept a labor theory of value. This states that
>>the only value in any commodity is based on the labor that
>>went into it.

>Such theories are demonstrably false....

Then perhaps you could demonstrate them to be so....

>Their promotion creates resentment
>and greed within the population, ...

Unlike your view which engenders people to hate the government and withhold their taxes from funding the common good. Uh, Huh.....<grin>

>That said, in your example of the production of the chair,
>no amount of labor will render it of value if it only has two
>legs. It should be evident to any rational person that labor
>alone is not the determinant of its value.

I'm sorry, do you believe that this somehow proves your case?

>>In exchange for this the workers receive a wage. Since
>>ALL of the value that went into the object is the product
>>of labor, the wage should equal the total of that labor.

>No, the value of the chair is determined solely by its
>perceived desirability to those able to buy it.

OK, where did this desirability come from? Which do people actually desire? A hunk of raw iron or a metal chair? The latter obviously. What is the sole difference between these two commodities?...The

imposition of labor and nothing else.

>In a free
>society (which is NOT the goal of socialism), the buyer is
>allowed to determine its worth through his decision to
>purchase it.

This is certainly true in regard to democratic socialism. Take Volvo for example. This auto company is run under the umbrella of democratic socialism. The factories are controlled by the people not absentee stockholders. Yet the price of a Volvo is set by the free market. The two systems can easily co-exist to the benefit of everyone.

>Government intervention in this process,
>through regulation of the availability and price of all
>chairs, denies the purchaser the right to determine the
>value of such products for himself.

Sheer nonsense. Simply false.

>The Big Lie of socialism is coming up.

>>Because this equation has failed to factor in profit. The
>>business owners (let's posit a large number of stock holders
>>for the sake of argument) do absolutely nothing for society.
>>They have not had a hand in transforming the valueless
>>into the valuable, yet they are still getting paid. How?
>>Because, via profit, they are STEALING value from the workers.

>The business owner(s) are entitled to whatever profit
>results from the sale of the chair by virtue of the fact
>that they have paid everyone concerned for the right to
>own it.

The point is that they have paid LESS than the true value of the object. In other words, they have received value on the basis of fraud. That's the theory anyway.

>Because they own it, they are morally entitled
>to sell it, scrap it, or use it themselves. They are
>obligated to no one.

From the socialist perspective, they are not morally entitled to it AT ALL because they have not yet paid the full price.

>By pitting workers against business owners (who are
>workers themselves),

Business owners who actually work, deserve a wage commensurate with their actual labor. Those who merely collect dividend checks are obviously not working--they are sponging off the stolen value of their workers.

>socialism grants itself absolute
>control over all citizens.

Nonsense. That why we call democratic socialism, "democratic."

>It denies the right of the
>business owners to do as they wish with the products ...

It denies that business owners should exist at all, at least at the
production level.

>>Thus PROFIT equals theft, not taxation.

>This is ludicrous. The laborers' hours and wages are the
>result of entering into a VOLUNTARY agreement with the owners.

The victims of con games and other frauds also enter into "voluntary
agreements." Does that mean it's OK?

>Taxes demand payment from workers under THREAT OF FORCE.

Only because the majority agree that such is warranted for the benefit
of society. Those who don't pay their taxes are criminals. It is
they who are thieves by stealing the benefits of public services
without payment.

>>People with your mindset have fallen for the great con--the
>>real thieves have deceived you into believing that the so-called
>>government (which is really the collective will of the people)
>>is the enemy when, in fact, it is the business owners.

>What exactly is the collective will, Arden? Is it the
>will of 50% of the people? More?

50% plus one. Democracy--It's the worst system ever devised, except
for all the others.....

>Which topics is the collective will based on? Economics?
>Politics? Favorite color toilet paper? Who determines the
>topics to be considered and their relative importance?

At the state level you have the initiative process at your disposal.
Use it and see how far you get. If you are concerned about the
federal level, get involved in your party--participate in the platform
process or run for office.

>The summary answer to all the above may be stated in one
>sentence: COLLECTIVE WILL is constituted solely by
>opinions that are formed of, by and for the government.

Which, I maintain, represents US. There is no "government" except us.
At least not in the United States.

>It is falsely claimed to represent the wishes of people who
>not only don't agree, but who are incapable of being
>homogeneously defined. It further assumes that those in

>government, in their infinite wisdom, know what is best for
>their subjects and are incapable of being seduced by the
>availability of unearned (and nearly unlimited) money and
>power. The irony to this is that creation of unearned money
>and power is the sole basis by which socialism survives.

On the contrary, the money is most certainly "earned." In fact, it is only through the services of government--the stabilizing presence of law enforcement, the production of road and so on--that wealth is created at all. Your argument is completely irrational. It seems to be based purely on emotion.

>In any event, there is NO such thing as COLLECTIVE WILL.

Only in your imagination.

>It
>is merely a tool used to empower government at the expense
>of the freedoms of its citizens, and it has been used by
>every tyranny on the planet to subdue individual citizens
>for purposes of extorting their labor, property and earnings.
>COLLECTIVE WILL is, in fact, the will of the GOVERNMENT, not
>the will of the individuals which such governments claim to
>represent. There are NO exceptions to this in the entire
>history of man.

Really. Do you suggest that the hoards of Genghis Khan or the states of the Borgia popes used the concept of "collective will?" How about Louis XIV who said "L'etat c'est moi!" (The state is me...)? Did he use the concept of collective will to "to subdue individual citizens." I don't think so. I love America and the American system. I really get tired of selfish short-sighted individuals constantly trying to tear it down.

>Before leaving this topic, I want to mention one other
>thing to U.S. readers. Arden's post presents socialist
>views that are overtly recognizable as such to many people.

Of course. I said in the note you deleted that was intentionally playing the devil's advocate. I clearly stated that the post represented the position of Social-democracy.

>Arden's view of a world in
>which a classless society is governed by an omnipotent
>government is much nearer,

This is emphatically NOT "Arden's view" even within the post above. Among other things, I strongly support checks and balances within the government as exercised within American democracy as we know it.

>I will reply to the section of this post relating to
>spectrum and Amateur Radio in a second article.

OK, but since this is an amateur radio newsgroup, I intentionally
tried to tie the conversation to that subject, separating it out this
way takes us far off topic.

Using a dictionary to define a complex political term is utterly laughable. I, as one who, among other things, teaches the history of socialism at the college level, am vastly more qualified to define the term than are the editors of your dictionary.

>>Socialists accept a labor theory of value. This states that
>>the only value in any commodity is based on the labor that
>>went into it.

>Such theories are demonstrably false....

Then perhaps you could demonstrate them to be so....

>Their promotion creates resentment
>and greed within the population, ...

Unlike your view which engenders people to hate the government and withhold their taxes from funding the common good. Uh, Huh.....<grin>

>That said, in your example of the production of the chair,
>no amount of labor will render it of value if it only has two
>legs. It should be evident to any rational person that labor
>alone is not the determinant of its value.

I'm sorry, do you believe that this somehow proves your case?

>>In exchange for this the workers receive a wage. Since
>>ALL of the value that went into the object is the product
>>of labor, the wage should equal the total of that labor.

>No, the value of the chair is determined solely by its
>perceived desirability to those able to buy it.

OK, where did this desirability come from? Which do people actually desire? A hunk of raw iron or a metal chair? The latter obviously. What is the sole difference between these two commodities?...The

imposition of labor and nothing else.

>In a free
>society (which is NOT the goal of socialism), the buyer is
>allowed to determine its worth through his decision to
>purchase it.

This is certainly true in regard to democratic socialism. Take Volvo for example. This auto company is run under the umbrella of democratic socialism. The factories are controlled by the people not absentee stockholders. Yet the price of a Volvo is set by the free market. The two systems can easily co-exist to the benefit of everyone.

>Government intervention in this process,
>through regulation of the availability and price of all
>chairs, denies the purchaser the right to determine the
>value of such products for himself.

Sheer nonsense. Simply false.

>The Big Lie of socialism is coming up.

>>Because this equation has failed to factor in profit. The
>>business owners (let's posit a large number of stock holders
>>for the sake of argument) do absolutely nothing for society.
>>They have not had a hand in transforming the valueless
>>into the valuable, yet they are still getting paid. How?
>>Because, via profit, they are STEALING value from the workers.

>The business owner(s) are entitled to whatever profit
>results from the sale of the chair by virtue of the fact
>that they have paid everyone concerned for the right to
>own it.

The point is that they have paid LESS than the true value of the object. In other words, they have received value on the basis of fraud. That's the theory anyway.

>Because they own it, they are morally entitled
>to sell it, scrap it, or use it themselves. They are
>obligated to no one.

From the socialist perspective, they are not morally entitled to it AT ALL because they have not yet paid the full price.

>By pitting workers against business owners (who are
>workers themselves),

Business owners who actually work, deserve a wage commensurate with their actual labor. Those who merely collect dividend checks are obviously not working--they are sponging off the stolen value of their workers.

>socialism grants itself absolute
>control over all citizens.

Nonsense. That why we call democratic socialism, "democratic."

>It denies the right of the
>business owners to do as they wish with the products ...

It denies that business owners should exist at all, at least at the
production level.

>>Thus PROFIT equals theft, not taxation.

>This is ludicrous. The laborers' hours and wages are the
>result of entering into a VOLUNTARY agreement with the owners.

The victims of con games and other frauds also enter into "voluntary
agreements." Does that mean it's OK?

>Taxes demand payment from workers under THREAT OF FORCE.

Only because the majority agree that such is warranted for the benefit
of society. Those who don't pay their taxes are criminals. It is
they who are thieves by stealing the benefits of public services
without payment.

>>People with your mindset have fallen for the great con--the
>>real thieves have deceived you into believing that the so-called
>>government (which is really the collective will of the people)
>>is the enemy when, in fact, it is the business owners.

>What exactly is the collective will, Arden? Is it the
>will of 50% of the people? More?

50% plus one. Democracy--It's the worst system ever devised, except
for all the others.....

>Which topics is the collective will based on? Economics?
>Politics? Favorite color toilet paper? Who determines the
>topics to be considered and their relative importance?

At the state level you have the initiative process at your disposal.
Use it and see how far you get. If you are concerned about the
federal level, get involved in your party--participate in the platform
process or run for office.

>The summary answer to all the above may be stated in one
>sentence: COLLECTIVE WILL is constituted solely by
>opinions that are formed of, by and for the government.

Which, I maintain, represents US. There is no "government" except us.
At least not in the United States.

>It is falsely claimed to represent the wishes of people who
>not only don't agree, but who are incapable of being
>homogeneously defined. It further assumes that those in

>government, in their infinite wisdom, know what is best for
>their subjects and are incapable of being seduced by the
>availability of unearned (and nearly unlimited) money and
>power. The irony to this is that creation of unearned money
>and power is the sole basis by which socialism survives.

On the contrary, the money is most certainly "earned." In fact, it is only through the services of government--the stabilizing presence of law enforcement, the production of road and so on--that wealth is created at all. Your argument is completely irrational. It seems to be based purely on emotion.

>In any event, there is NO such thing as COLLECTIVE WILL.

Only in your imagination.

>It
>is merely a tool used to empower government at the expense
>of the freedoms of its citizens, and it has been used by
>every tyranny on the planet to subdue individual citizens
>for purposes of extorting their labor, property and earnings.
>COLLECTIVE WILL is, in fact, the will of the GOVERNMENT, not
>the will of the individuals which such governments claim to
>represent. There are NO exceptions to this in the entire
>history of man.

Really. Do you suggest that the hoards of Genghis Khan or the states of the Borgia popes used the concept of "collective will?" How about Louis XIV who said "L'etat c'est moi!" (The state is me...)? Did he use the concept of collective will to "to subdue individual citizens." I don't think so. I love America and the American system. I really get tired of selfish short-sighted individuals constantly trying to tear it down.

>Before leaving this topic, I want to mention one other
>thing to U.S. readers. Arden's post presents socialist
>views that are overtly recognizable as such to many people.

Of course. I said in the note you deleted that was intentionally playing the devil's advocate. I clearly stated that the post represented the position of Social-democracy.

>Arden's view of a world in
>which a classless society is governed by an omnipotent
>government is much nearer,

This is emphatically NOT "Arden's view" even within the post above. Among other things, I strongly support checks and balances within the government as exercised within American democracy as we know it.

>I will reply to the section of this post relating to
>spectrum and Amateur Radio in a second article.

OK, but since this is an amateur radio newsgroup, I intentionally
tried to tie the conversation to that subject, separating it out this
way takes us far off topic.

>>The following is what Tandy has to say about the HTX-202's "ERR 2"
>>message.
>>It's better to get the information "straight from the horse's mouth"!!

Which is the only think you'll ever hear from a post from ATD BBS:

COPIED FROM ATTENTION to Details BBS:

HTX-202 Error Codes (taken from a Radio Shack memo)

ER1 indicates an internal RAM error. It appears when the memory backup
battery is dead, when something has caused the memory contents to become
corrupt, or as a result of physical or static electric shock. To clear
this error, turn off the unit. Then turn it back on while holding down the
"function" and "D" buttons. This clears the memory. If the error returns
after you clear the memory, service is required.

ER2 indicates a PLL unlock. The radio gives this error if the PLL alignment
is off or if the transmitted signal interferes with the internal PLL
frequency. This error has been reported most frequently when using the
supplied "rubber ducky" antenna with either a high-power battery pack or
with an external DC source.

According to the memo, the fix for this is to use an external antenna when
using external DC power. The memo goes on to say that if the problem
persists, send the transciever to the repair center.

Posted-By: auto-faq 3.1.1.2
Archive-name: radio/personal-intro
Revision: 2.1 1994/11/01 03:50:23
Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Phil Sussman <pactor@pactor.com> wrote:

: Here is what I mean. There is a move afoot to 'eliminate' CW as a
: requirement for Hams worldwide. ...some of the people who
: are most in favor of it are (you guessed it) 'Commercial interests'.
: Now why is that? Simply because if we 'give up' anything, we are seen
: as being able to surrender EVERYTHING.

Hi Phil, methinks your logic is upside down. If we increase the
requirements (the opposite of giving up or surrendering) then
the number of hams will be so small that it won't matter if
we lose our bands. In today's society, strength comes from
having the biggest gang. After all, that is what democracy
is all about. The greatest number voting the greatest good
for the greatest number at the expense of the rest.

How anyone can twist logic to relate loss of vhf/uhf bands
to the elimination of Morse code testing is unbelievable.
If only we had required Morse code tests for no-code techs
then nobody would be trying to get our frequencies. duuhhh!

3537. Re: US Operation in Canada?

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-15 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <ZROvsSQ.sanderman@delphi.com>
Source record: 223032

Operation by US hams holding Tech Plus privileges and operating in Canada MAY NOT operate on 160 meters because they don't have that band available to them in their home country. Only these privileges in common (between the home country and the country of operation) for a specific class of license are allowed. In other words, you cannot have more operating privileges in a foreign country than you have at home.

Other comments and discussion would be welcomed.

Jeff-
Perhaps you talked to the wrong person, or maybe to the wrong service provider. If what I've heard is true, then it may be possible to have two phones with the same number. The fact that they have the same serial number seems irrelevant. In fact, it would allow the provider to know which phone made or received a call.
In my ignorance, I have a feeling that you are not likely to succeed in programming your own phone. Whatever you want to accomplish, it must be with the "blessing" of the provider. When they detect anything irregular, they may assume it is the result of fraud, and disable the phone's account.
No, this isn't the right news group, but it is an interesting subject!

[snip]

You could argue exactly the opposite - that by keeping CW as a
requirement for certain licence classes, we make ham radio appear to be
an anachronism, with no relevance in modern communications!

The Creation "Science" Institute has/is publishing
papers claiming that the speed of light is gradually
changing; in fact, they say researching historical
measurments of c, reveal that it is slowing down!

Godd thing Maxwell, Planck, Einstein and others
of the modern physics community don't know this.
Why, if the Institue research is correct, even
the present cosmologic models are in big trouble,
like why need a Big Bang, which of course is
what the Creation proponents are out to disprove.
Wonder what the effect would be on the doppler
slowing of light and the present attempts to more
accurately determine the Hubble constant, and thus
the age of the Universe will be?

And it can work the other way around, too. About 20 years ago,
a friend of mine who only does DX wanted to put up a 70 foot
tower on a city lot in a residential neighborhood. It has a
6 element 20 meter beam and a 3 element 40 meter beam on it.

Of course the city said no, but somebody got the local CB club
to gather signatures on a petition for him, and 475 signatures
later, the city council reversed itself, and permitted the tower.

: Now why is that? Simply because if we 'give up' anything, we are seen
: as being able to surrender EVERYTHING.

Your logic evades me. Eliminating the obsolete CW requirement
does not mean that we are surrendering the CW subbands, but rather
than other HF users need no longer be competent CW operators. In
reality, we would be gaining a lot of HF operators, making it even
less likely that those bands would be threatened.

: Eliminate requirements: While it is always best to move with
: the times there is a difference between changing rules and
: elminating them. It is a double edged sword, if you make it
: so much easier for new Ham Operators to arrive on the band,
: you also make it that much easier for commercial interests to
: gain a foot-hold via that route.

A proper reform would be one similar to the novice enhancement
of 1987. Some doomsdayers predicted the worse, but it actually
was to the overall benefit of ham radio. My first contact as a
ham was on 10 meters USB, and that teased me just enough to
upgrade. I don't think that commercial interests would be too
concerned with whether or not displaced amateurs had to do CW.
The more amateurs you have on the band, the less likely it is
to be taken away.

: My Point: Talk is cheap.. when it comes to Amateur Radio

: USE IT OR LOSE IT...

That's exactly right, and if we have more HF operators, it will
be used a lot more. I know no-coders who have put up repeaters,
established packet BBSes, built satellite stations and more.
Most of them spend more time on the air than I do. Their use
of the ham bands (particularly two meters and 440 MHz) make
those bands less attractive to commercial interests. So, how
often do you get on six or 220? Remember, use it or lose it...

Cheers -- Mark

Hi Cec; So we should reduce requirements (say, by removing code tests) to
increase our strength? This is no different than lowing the voting age to
to maybe 10 to increase the strength of our democracy. Both are a bad idea.

They've made a big mistake. The speed of light is not changing. Seconds are getting shorter so it only appears that the speed of light is changing. Seconds getting shorter also explains the red shift and the fact that the universe is not nearly as ancient as most people think. Seconds were pretty long immediately following the big bang. We are slowing down because of the center of gravity of the universe. Hence, seconds are getting shorter. Also explains why bristle cone pine rings don't agree with carbon dating.

No one, except Einstein, has ever compensated for the changing
length of a second. Our seconds were pretty long immediately
following the big bang. But the slowing caused by the center
of gravity of the universe has caused our seconds to become
shorter. That's why it appears that the speed of light
is changing. It's not so much the miles that are changing
as it is the length of a second is changing. Same thing
for the red shift. The number of cycles per second drops
when one decreases the measured interval - so the universe
is not nearly as big or as old as calculations using present
day seconds would have us believe. Changing seconds explain
the difference between the bristle cone pine rings and
carbon dating. It is not neglible.

Question is: Will the length of a second go to zero and
what happens to us and the universe if it does?

What a funny song Burt, did you do all that yourself? I am glad Ham radio is American, because America is the great melting pot and people from everywhere in the world can own a piece of the action. Isn't that just grand? German Americans can talk to other Germans, The sky is the limit with ham radio. I never realized just how far reaching and impressive it really is. I am amazed by how many participate in this, and how much it just keeps growing. I also never knew about the activities until my friend got into it and now his wife does too. They are always helping with something cool. I like hearing their stories.

This is just too cool.

Well, if time slows down as you approach C, and maybe it stops when
you hit the big C, my real guess is that you could not issue a
citation because you could never reach the violator unless you started
at Point A the same time the violator did.

And, if you were able to catch up with the violator (which
theoretically you could not) that would mean that during your chase
you had to exceed C in which case you would have travelled back in
time....possibly to some instant before the violator left A. So, you
would have to issue the citation at Point A before the violator
left...thus pissing him off for something he didn't do and making him
so angry that he presses the accelerator to the floor and vanishes
into nothingness for having not allowed a gradual acceleration which
would have kept himself and his C craft from being crushed by the
gravitational forces of that acceleration...Whew..I'm out of breath!

Okay Jeff,

I checked with N1MBV, my XYL...She agrees with me and she states that
any transmissions which are prohibited by FCC Part 97 are illegal.
Transmitting to harass or intentionally affect someone else's
transmissions to the detriment of those transmissions anywhere in the
ham bands (no matter if that someone else is authorized to be there or
not)...is illegal. Short and simple.

Heck, I know what you're thinking now Jeff. But, Michelle is as
credible a source as anyone I know. :)

Drew would you please cite the legal precedent which proves this for
us? I have access to a legal library and can look it up. I don't,
however, believe your statement is correct. But I would like to know
Who v. Whom set this one.

Also, as in my city, there are many "Freebanders" who consider
themselves CB'ers who operate above 27.405. I have one who lives
close enough to me that my neighbors ask me if I am still operating
ham radio. I reply in the affirmative to which they state that they
can hear my transmissions in their telephones, stereos, and one
(without cable) on a TV. They even told me what "I" was to have said.

That is when I asked them if they understood and could copy Morse
Code. Also if their stereos, telephones and TV's had each had a
BFO--and I explained what that was. I was actually making a point to
them that they would not make any sense of the modes I operate. I am
not an AM'er. If they did hear them they would sound like Donald Duck
or a rhythmic on-off noise.

"No," they said, "We could hear the person saying he had to order this
and that." (These people live in a condo complex). Since I can hear
the neighbor myself in my computer speakers (amplified of course) and
my telephone, my scanner, the ten meter band, and in my IR headphones
I naturally pointed my hand in his direction.

Watching TV last night my CB neighbor was telling his buddies that he
was glad he wasn't getting into his neighbor's electronic equipment.
Well I haven't confronted him yet...this time. I'm
waiting...patiently...

Photons have zero rest mass, Sam. If they didn't, then they'd gain infinite relativistic mass by travelling at the speed of light (according to Einstein's Special Relativity). They do carry momentum, however, as a result of their mass/energy equivalence. That's how light sails work (and even those little toy radiometers you see at the hamfests).

Hi all. Can anyone suggest where I should tune for 6m am activity when the band opens? Is there a calling freq? I once read it's 50.2 but not sure. Thanks, 73 N1AEP

3563. Re: 6 METER AM - where?

Newsgroup: rec.radio.amateur.misc

Message-ID: <4q1agb$ou@omnifest.uwm.edu>
Source record: 222858

According to "Six Meters: A Guide to the Magic Band" by Ken Neubeck, WB2AMU:

"The next block of frequencies, 50.3 to 50.8 is where any mode can be used. However, some convention has been established with the most common mode in this range being AM. That mode is particularly popular in certain areas of the U.S. late at night. Typical gear that is used here are converted commercial radios that are crystal controlled. AM groups will have what is known as activity nights which usually start at 11 p.m. local time or after, in order to avoid TVI complaints. AM and Six seem to go together as there's a lot of room on this band that can accomodate the full fidelity of an AM signal. The AM calling frequency that is generally used is 50.400."

Neubeck's book is available for $14 postpaid (Calif. residents add 93 cents tax) from: Worldradio Books, Box 189490, Sacramento, CA 95818. It's a good and relatively recent introduction to Six Meters. I especially recommend it to newcomers.

Hi All...
I am going to be visiting Vancouver for a hockey tournament between 6/26 and 7/3. I am wondering if any of the locals could let me know what the local radio scene is as far as active repeaters, radio shops and anything else of ham interest. Also, I would like to run a sched with a friend if anyone would be willing to op at your station for 20 minutes or so.
Thanks and 73,
Patrick KB0BRO

But photons DO NOT hve mass! If they did, they could not travel
at "the speed of light", and Maxwell's equations would be false,
and radio would not work. It would take ALL the energy in the
Univers to accelerate one photon to the speed of light, if it
had any mass whatsoever, per Albert Einstein, 1905. He has
not been found to be wrong yet.

Read some of Richard Feynman's stuff for some answers, suggest his
very short, brilliant little book titled "QED" (short hand for
Quantum Electrodynamics, where Maxwell's stuff is considered
in light of the new knowledge of the quanta, uncertainty
principle, and virtual particles, etc.), it is in most
Borders and Walden stores, paperback. For the work ahead of this
book, Feynman was awarded a Nobel Prize in Physics.

You have got to be kidding! This concept is NOWHERE in
modern physics or cosmology. Einstein did not compensate for
any such phenomena. He demonstrated that only in systems
moving near the speed of light, did the time, in the moving
system, as measured/observed from a nearby non-moving
system, appear to slow. But in actuallity, in the
accelerating system, time would proceed at its "normal"
rate as observed in that system. This is part of Einstein's
theory of relativity. Incidently, it comes out of work
by a Dutch scientiest in the 19th centruy named Lorentz.
Einstein had a lot of bright men upon whose shoulders he
could also stand.

Einstein appeared as a magician to his contemporaries,
because he applied about 30 years ahead of the others,
the principles of symmetry in math and physics. Hence his
most famous observation, a principle of symmetry, that
the energy in a system is equal to the mass of the
system multiplied by a gigantic number, the square of
the speed of light (a quntity which he deduced was a
universal CONSTANT; not changing no matter HOW one
should choose to measure it, it don't change!)

BTW, James C. Maxwell's equation are a beautiful exmple
of symmetry; in this case between the equvalence of
magnetic and electric fields -- that is, they are manifistations
of some very same thing, for which, see Richard Feynman's work,
Quantum Electrodynamics.

>bob,4.90-5.00-5.10 are in the packet portion of the band.

My brand new silver colored 1996-97 edition of the ARRL Repeater Directory shows that 144.90 - 145.10 is for weak signal and FM simplex. It says that 145.01 (not 145.10) .03, .05, .07, and .09 are widely used for packet radio.

Bearing that in mind, it would appear that 144.90, 145.0 and 145.10 are appropriate for the mobil 2m freqs that I originally mentioned.

However, apparently that idea hasn't caught on, since everyone who responded said "Go five-two"

And so I will. And thanks again to all that responded. 73 de WX3Y

Burt,

The fellow is right -- this crap doesn't belong on an amateur radio news group. Amateur radio, for me, has always been a way to build bridges of international understanding without politics getting in the way. Since you know that there are German users of this news group, why do you go out of your way to insult them?

You are one of the few braying jackasses who seem to delight in making a great deal of noise just so lots of folks can see that you're a moron. Let's not talk of your selling the rig, I move that we get a kitty going to buy your computer and modem.

Dave Heil

Your analogy is flawed. Eliminating the testing requirement for Morse code
is more like not requiring a horse riding test to get a driver's license.

Nobody wants to reduce the requirements, just change them to attract
more technical types which would probably increase the difficulty of the
written tests.

Seems to me one of the reasons that pro-code-testing hams want to maintain
the CW requirement is they feel inadequate about their technical knowledge
and are against increasing the technical difficulty of the written tests.
They have chosen to be good in a skill that doesn't matter anymore and are
understandably afraid of the future.

>
>tx--73 Terry/WB4FXD

I use Kings crimp connectors for 9913 (they have UHF, N, and BNC for
this cable). Amphenol offers a solder-on N connector for 9913. Note,
however, that Belden has introduced a new cable, claimed to be a
more flexible replacement for 9913. It doesn't use the odd center
conductor diameter of 9913, so ordinary RG8 type connectors fit.
Loss figures are supposed to be similar to 9913, but it has a foam
core. Unlike ordinary RG8, it has both Belfoil and braid for an
outer conductor, like 9913. Contact your Belden distributor.

: You have got to be kidding! This concept is NOWHERE in
: modern physics or cosmology.

True, it's not there but it should be because it explains a lot of things including the red shift and the contradictions in the age of the universe. If we are slowing down from near the speed of light, the distances are expanding in the direction of that movement and seconds are getting shorter. Not only is ancient light having to traverse the expanded space but we are measuring its frequency with a shortened second - a double whammy.

: Einstein did not compensate for
: any such phenomena. He demonstrated that only in systems
: moving near the speed of light, did the time, in the moving
: system, as measured/observed from a nearby non-moving
: system, appear to slow.

He demonstrated it but didn't compensate for it? What kind of gobbledygook is that? I'm suggesting that we are still moving near the speed of light and slowing down after the big bang. Most of us haven't realized it yet *because* of relativity which says we cannot measure our absolute velocity because we can't do it with absolute distances and times. Just like Einstein, we can't measure it but we can sure think about it.

: the speed of light (a quntity which he deduced was a
: universal CONSTANT; not changing no matter HOW one
: should choose to measure it, it don't change!)

Then how do you account for the latest results that measures the speed of light as something that is changing unless the measurements themselves are being affected by relativity?

Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N4AA & QRZ DX, N5FG, W5ZPA, N6EK, WA6BXH, AA8U, K8AQM, KA9FOX, KC8IM, 9M2TO, DF4RD, DL7VOA, DL9GOA & DX News Letter, EI2GX, G3SXW, G4BUE & DX News Sheet, SP5ECA, SM0DSF, VE3MJQ, VE6SRC and ZS6RVG for the following DX information.

5A1A QSL UPDATE. Carl, N4AA, editor of QRZ DX, reports details have been worked out for a stateside QSL manager to handle QSLs for U.S. contacts with the 5A1A operation of July 1995. ONLY (repeat ONLY) contacts with the Ukrainian operartion in July 1995 will be handled. The last day of their operation was July 25, 1995. Contacts with the continuing Libyan national's 5A1A operation CANNOT be confirmed. The stateside QSL Manager for 5A1A (Ukrainian operation) will be N4AA. The only requirement will be an SASE. If you have already QSLed to the original LZ or OM managers, or if you have QSLed directly to Toly in Kiev, you do not need to QSL again. Those will be answered 100%.

5X, UGANDA (NEWS)... The DXNS report the following Ugandian News: Peter, ON6TT, who obtained the callsign 5X1T on May 30th, will be QRT for two weeks from June 21st when he returns to Belgium on holiday. Also, Ake, SM4ARJ, (one of his technicians) will probably be 5X1AR or 5X1ARJ. QSL 5X1T via ON5NT.....
Father Sebastiano's, 5X4C, mission was attacked on April 12th and the radio station was damaged and equipment stolen. He is currently QRT and welcomes any help to be active again......
Paul, 5X4F, and his wife Peggy, 5X4G, have gone QRT and have returned to the USA. During his eight month operation, Paul made over 12400 QSOs (including 650 on 160m and 1650 on 80m) most of which were with 100W solar powered.

9M2, WEST MALAYSIA. Tex, 9M2TO, has finally received his 6 meter four element yagi. He reports he will be watching 6 meters when he is in the shack. His 6 meter system is anIC-551, 150w Mirage amp and 4 element HB9CV.

BV, TAIWAN. There will be a station signing BO0KS from Kin-Men (Quemoy) Island (AS-102), July 26-29. QSL via BV2KI.

GW, WALES. The WestNet DX will be active again from the Welsh Island group EU-124 in the IOTA contest (July 27-28th) as GW4VEQ (or perhaps with a special contest call).

IOTA NEWS... Peter, SP5PB, will be active from the Italian Veneto Region Group (EU-131) and the German/Polish island Usedom (EU-129) until July 6th as SP5PB/1. Activity will be on CW/SSB and on the usual IOTA frequencies. QSL via home call: Piotr Brydak, Okolnik 9A/16, 00368 Warszawa, Poland. Peter plans a similar operation from these islands in September, 1996.

J52, GUINEA-BISSAU. Dave, KC9IM (remembered by some as 4K0IM, TL8IM, YB0AIM, KH2AD or KC6GZ), will be off to Guinea-Bissau in July and should be on in plenty of time for the CQ WW DX Contest in October. He will be there for the next two years and hopes to be signing J52IM. He will be active on 40-10 meters, SSB and CW. He plans to take his PK-232 along for RTTY operations. QSLs will be via KB9XN.

KH8, AMERICAN SAMOA. Don, N5OLS, will be active for the next three years as KH8/N5OLS. Operations will be on all bands/modes. He is frequently on SSB 14218 and 14224 kHz, or CW on 14030 kHz at 0300z. QSL via AA5BL or direct to Don Barclay, Box 8, Pago Pago, AS 96799, USA.

NEW IOTA! Steve, AA6LF, who was recently active from OC-172 and OC-187, said that he hopes to operate from Ashmore Reef (located in Northern Territory Outliers) the first week of August. He doesn't know what permissions are required yet, but he will try to work them out when he reaches Darwin. If Steve is successful, this will be an all-time new IOTA group.

OY, FAROE ISLANDS. Ingo, SM0DSF, will visit Faroe Islands for 14 days starting June 22nd. He plan to be active as OY/SM0DSF. Between a visiting conference and being out looking at nature, most of his operating time for amateur radio will be during the first week. QSL to homecall, CBA or bureau.

QSL CARDS UPDATES.... There is a delay for LU6Z (South Orkney Island) cards coming out due to a problem with the printer. Alberto, LU1DZ, hopes the first mailing will be around the end of June....
The recent operation to the Blasket Islands EU-007 by the WestNet & Saltee Dogs DX Groups made over 4000 QSOs on all bands from 160-2 meters. The QSL cards for the operation are being printed in Italy and must then be shipped to EI for distribution, so there will be a delay before the cards start to appear, but they will do their best to minimize it.....
The WestNet team looks forward to meeting many of you again from EU-124 in the IOTA contest as GW4VEQ (or perhaps with a special contest call)....
3W1D QSL cards. Marcin, SP5ES, reports he is getting many claims about poor service of 3W1D QSL cards made by him. The operation was done by the Russian operators. Marcin was only a mail drop off to avoid the theft by Russian postal workers. The cards were collected by him and safely shipped

via a carrier to Moscow. So no one card could dissappear by postage. He can only take the responsibility for the forwarding of the cards. If anyone still needs a 3W1D card, they can contact Marcin; he does have the logs for 1992 operation and still has some QSLs.....

SOUTH PACIFIC DXPEDITON. Five operators from 8th land plan to be active throughout the Pacific beginning July 1st,, and it will last a month. They will be active on all bands with an emphasis on 160-30 meters. All modes including RTTY from KH8 and 5W for the RTTY contest will be used, They will be active in the IOTA Contest. QSL all calls to AA8HZ unless specified otherwise. The operators Ted/K8AQM, Jeff/N8CC, Brian/KG8CO, Kurt/KG8DS and Dave/KB8ECG will be operating from various places and times. Their schedule is as follows:
V73 Majuro Island July 1-4th N8CC and K8AQM
V63 Ponape Island July 4-7th N8CC and K8AQM as V63CF and V63CK
V63 Truk Island July 7-9th N8CC and K8AQM as V63CF and V63CK
KC6 Palau Island July 10-12th N8CC and K8AQM as KC6BP KC6JJ
7J3 Japan July 13-17th N8CC, K8AQM and KG8DS as 7J3Y??
KH6/NH6 Maui Island July 17-19th N8CC and K8AQM as /NH6 or /KH6
NH8/KH8 Ofu Island July 19-24th NH8/N8CC, KH8/K8AQM, KH8/KG8CO
KH8/KG8DS and KH8/KB8ECG
5W0 Apia (W.SAMOA) July 24-29th N8CC/5W0JB, K8AQM/5W0TR, KGCO/5W0BS, KG8DS/5W0?? and KB8ECG/5W0??

SPECIAL PREFIXES. Industry Canada (Montreal) has authorized all Canadian Amateurs to use special prefixes to mark the 100th Anniversary of the Yukon Gold Discovery from 0000z, June 8th through 2400z August 8th, 1996. Canadian Amateurs may use special prefixes as follows:
Regular Prefixes/Special Prefixes, VA2/VD2, VA3/VD3, VE1/VC1, VE2/VC2 VE3/VC3, VE4/VC4, VE5/VC5, VE6/VC6, VE7/VC7, VE8/VC8, VE9/VC9, VO1/CZ5, VO2/CZ4, VY1/CK3 and VY2/CK4.

The Special Prefix VF6 will be used during the period of June 23-26th, by Calgary amateurs in honor of The Rotary Convention being held in Calgary. Also, Special Event Station VF6RFR will be on the air during this time.

YK, SYRIA. Marco operates from the Golan Heights occupied station as VE3MJQ/YK. He reports that he has only 2 more months left in the camp before he leaves for Canada. The station is 22 years old and is also used for CFARS (military) operation. His location is 65 km West of Damascus and near to Quneitra. The name of his camp is called Ziouani and is shared with a Japaneese contingent. North America stations should look around 14200 kHz at 1900z to 2200z. QSL via CBA. His QSL card is going to be a very nice picture of the site.

ZC4 Problems. Roger, G3SXW, reports some distressing news from ZC4-land. Currently non-residents of the British Sovereign Base Areas will not be permitted to operate amateur radio. Resident licensees may continue to operate, but it seems that visitors will not be welcomed. Naturally, the circumstances are somewhat unclear, but it would appear that sponsorship from one of the two SBA radio clubs will be required, and they are not

currently willing to co-operate with non-residents.

ZF, CAYMAN ISLANDS. Look for Wondy/ZF2KR, Stan/ZF2MP and Mike/ZF2PA from June 22-26th. They will sign portable ZF8, as they will be on Little Cayman Island. Operations will be on CW, SSB, and RTTY. General and Advance classes should look for them on CW 30 kHz from the band edge. Meanwhile, Art, WB8YFE, is planning to be active from June 25th to July 2nd with emphasis on 6 meters.

ZK1, SOUTH COOK ISLANDS (North Cook in 1998!). Bruce, AA8U, one of the operators (including K8MJZ, AG8W and KA8KZJ) for the upcoming South Cook Islands operation, July 11-21st mentions the following: "There is a really nifty web site that is worth the time to check out. Lots of neat pictures and information about the North and South Cook Islands. If you would like to see where we will be operating from, look into it:" http://www.ck/raro.htm

Bruce and the others have been working real hard to make sure they have decent antennas and equipment for their trip to South Cook. Bruce says he is already planning for another return trip to the Cooks. The next time will be to RF deprived North Cook Islands! This will take place in November of 1998.

ZS, SOUTH AFRICA. Dave, ZS6RVG, reports he is on most weekends. Check on 14184 kHz at 1600z.

ZS8, MARION ISLAND. Chris, ZS8IR, is very willing (time permitting) to schedule QSOs with operators via Internet. His E-mail address is: "cdebeer@cis.co.za". Chris gets his E-mail in batches via a satellite link. On an interesting note, you might want to look at a description of his stay on Marion Island which can be found with the following URL: http://cpcug.org/user/wfeidt/Contest/zs8ir.html

History shows that the written exams have constantly been dumbed down,
not strengthened.

We were sold a "pig in the poke" once before when we were told that
millions of "technical" people were just waiting for a codeless
license. Well, we created a codeless license -- one that gives
access to 99% of all available amateur spectrum, and one that gives
full operating privs on all bands where "technical innovation"
needs to take place. Yet, no millions of new hams. A hundred thousand
or so, but even then, how many would have come in through the novice
license anyway?

As the saying goes "Fool me once, shame on you. Fool me twice, shame
on me."

We don't need a codeless HF license. One already exists. Its called
Citizen's Band.

I'm looking for ideas on "2-way" radios to be used for our neighborhood watch night patrol. Am curious about other similar groups (volunteer, tiny-budget, etc) and wondering what they use.

CB's don't seem to have good range. Marine bands are obviously a no-no. So what is out there? Any creative solutions? We have cell-phones, but need radio communication too.

Help.

Clint, you can count yourself as a lucky one, I guess. OR maybe I should count myself an unlucky one? I dunno... anyway... I disagree whole heartedly with you. It is not irresponsible, unwarranted, or malicious. It's 100% true. If anyone is buying HAM gear from Radio Shack, I strongly urge them to purchase the extended warranty... seriously. From day one, I have always purchased the TSP (against my better judgement) and three times now I've "saved" myself some money.

Back in 1990/1991 I bought an HTX-100 10M rig. It worked swell for about a year, after I moved to Hawaii it quit working. Brought it in to a local RS repair center and they got it fixed. It would have only cost me about $180 bucks for the repairs on a $269 dollar radio.

I bought an HTX-202 in Oct 93, after moving from Hawaii to Nebraska, the finals quit working... I sent it in and repairs would have been $180 (for a radio I bought on sale for about the same price).

I bought an HTX-212 in Dec 95, in April it "smoked"... well, I still don't have the stupid thing back from repairs (actually, it did come back once but the tech simply replaced the antenna connector - didn't even noticed the smoke residue and the burnt chip on the board - excellent work, eh?) yet so I still can't use it...

Anyway, I would definately suggest anyone doing business with RS, HAM or other, should seriously consider the TSP before saying no.

In contrast, my Kenwood TS-820S is still going strong with no major repairs in 20 years... go figure.

Exactly - the medium does have an effect. The 186,000 m/s2 figure is for a vacuum; in all other media the speed is less.

I agree with most of your erudite answers, Gary, but you're wrong here. The toy "radiometers" move because the darkened surface absorbs more photons than the other side, thus becoming warmer. The warmer side then heats adjacent air molecules in the glass bulb. The warm molecules "pick up steam." and its their collisions with the dark surface that impart motion to the vanes.

Easily proved by evacuating the glass bulb; presto, no movement.

> the cell phone company to a) know about or b) charge you for.

or "c) allof the above".

Unfortunately not all carriers offer to let your phone number appear on more than one phone. If your carrier doesn't offer it (usually because they are not capable of it) you're just outta luck and have to pay for a second number.

And of course just because your carrier doesn't offer it, tha does not make you eligible to clone your own phone. It is still fraud. (See 47 CFR 22.919 as of Oct 1, 1995)

> Who is Jeff ? Have you met him ? Did he give a ham call in his post ?

I have seen folks bring up this issue before. My question is, why? Regardless of whether Jeff's request is suspicious or not, why do you care, or otherwise make an issue out of somebody not giving their callsign in this newsgroup. Is it required? Am I supposed to type my call every 10 minutes while I am in this group...and again before I close the window.

Callsigns do one thing...identify transmissions as required by some reg. They don't identify operators, although everybody treats them like they do. They identify stations. Other people have used "my" call sign, and I have used "others'". Perfectly legal station ID but it does't mean the licensee is the person using the radio. There is no requirement to identify operators on the air.

So with that, why do we care if someone hear doesn't give their call? I haven't put my call on a post to this newsgroup in quite a while. I figure, what for? Of course I am not hiding my call either. Any semi-resourceful, half wit connection can find it in seconds.

So tell me why are callsigns so important to some people here?

> In my mind, Jeff is a) somebody who is trying to beat the phone
> company, or b) somebody from the phone company trolling for people
> who can tell him how to beat the phone company so he can in
> turn beat them.

You're probably right on the above.

> Jeff's message isn't an 'interesting subject'. It's a discussion of
> doing something illegal. Like installing filters to beat the cable
> company. Like stealing satellite TV signals. My cell phone bills are
> higher than they would be if criminals weren't already stealing
> millions of dollars worth of cellular calls. So, in my opinion,
> Jeff's message isn't an interesting subject, it's bullshit, and Jeff
> can take a hike.

I gave Jeff the benefit of the doubt and considered him ignorant of the issues rather than dishonest. I sent him an e-mail explaining exactly what he asked about - not how to do it - but why he couldn't.

And yep the rates are probably are higher than they need to be. But I can say with a fair amount of confidence that if all cellular fraud was eliminated today, you wouldn't see your rates go down. The carriers' books would just start looking better.

For the most part cellular rates have not increased due to fraud. But they haven't gone down either. In this area, basic rates have not gone up since cellular was introduced here 10+ years ago. It was $45 mo / .45 min then, and it still is today. They have packages now that make it economical, but the basic rates haven't changed to my knowledge. Compare that to your regular phone bill! Is it the same as it was 10 years ago?

Just wanted to share a "favorite" aspect of this problem..

Here in Michigan during sunspot highs, the CW portion of 10M
is rife with illegals- usually kids and women shouting to each
other in Spanish, and (thanks, Uniden and RS) in AM,USB,LSB,and FM.
One of the self appointed Radio Cops audible up here is a guy who
speaks, in Spanish, in an overmodulated, overechoed "announcer" voice
to these people, that these are Frequencias Por Los Operadores Amatures
Y sus transmisiones son ILLEGALES!! He never seemed to faze the illegales.
Also heard up here is the person who plops down on the bootleggers and
sends a stream of 40-over 9 RTTY. Doesn't work either, just irritates those of
us who were trying to eke a CW qso thru the weak interlopers.

PTT means PUSH-TO-TALK, or a means of initiating the TRANSMIT functions on
voice transmitters/transceivers. You won't have such a thing on a receiver.

hmmm. seems we are back to the "is it a wave or is it a particle?" argument.

If this is not really tongue in cheek, may I ask:

1) what is your sending speed?
2) is your character formation perfect?

NOTE I'm not about to try and determine the correct answer!

Hi all,

I have just updated the WIA (NSW Division) Home page. You might like to check it out, as I have added many new links, and other information about the WIA and Amateur operations in New South Wales and Australia.

Now I'm not normally tooooooo suspicious, but here's a new QSL bureau that:

1. Has no names.
2. Has no calls.
3. Has no street address.
4. Wants you to send 'em five bucks.

Hmmmmmm...

At work (U.S. Govt.) we have some new Saber portable radios that have the NiMH batteries on them. Only have had one fail so far. The radios output 6 watts on transmit. The batteries are shorter than the same capacity battery that came with our original Saber radios. Of course the batteries have the Motorola name on the outside of the case.

As a new reader of only a few days I must say that this column is giving me a few laughs mixed with a little sadness too. Still, I would like to add my ten cents worth if allowed! All this tasteless stuff about what happened in ww2 seems to have swallowed up or suppressed any discussion about what happend to the Brits in the orange groves out there in the mid east when a new Nation was being born in blood and violence. British 'Peace Keepers' were hanged by Jewish Stern Gang and Hagganot [typo?] terrorists from the fruit trees and later many of those same terrorist leaders became the leaders of the new state. Just a few years later they were all pontificating about the Arab Terrorists and telling us how dreadful these people were... That Nation has systematically driven out the local inhabitants in the 'new land', terrorised the families of activists and stolen land to enhance their own capabilities and their future economic, mineral and water resources - so what the hell gives these young correspondents the right to give forth about what the Germans 60 years ago, and that comes from someone who was at the sharp end of the bombs and rockets raining down in 39-45!... Just an observation from some old Brit who lost 'dear and near in those Orange Groves - all seemingly for the sake of peace. Isn't that when it became obvious that terrorism DID work and where it all seems to have started with lumps!! Oh yes, and I have been out there and samped some of what is going on... 73 de Ken/G4MPQ

G-TOR!!!WHAT'S THAT. DE VK2BOD

PART 2

WITH HUFFMAN,CERTAIN LETTERS ARE ASSIGNED A CODE SHORTER THAN
THE ORIGINAL 8-BIT ASCII CHARACTER. AT TIMES,HOWEVER,HUFFMAN
COMPRESSION MAY PRODUCE MORE BITS THAN THE ORIGINAL MESSAGE,SO
G-TOR IS DESIGNED TO USE HUFFMAN ENCODING "ON DEMAND"-ONLY
WHEN THE COMPRESSION ACTUALLY REDUCES THE TOTAL NUMBER OF
BITS.RUN-LENGHT ENCODING FUNCTIONS SIMILARLY, BUT ASSIGNS A
SINGLE CODE TO THOSE CHARACTERS WHICH HAVE BEEN REPEATED
THROUGH THESE TWO COMPRESSION METHODS, THE AVERAGE NUMBER OF
BITS FOR A MESSAGE IS REDUCED,OFTEN AS MUCH AS 30 OR 40 .

DURING TRANSMISSION,G-TOR AUTOMATICALLY OPERATES AT ONE OF
THREE BAUD RATES,300,200, OR 100,WHICHEVER IS OPTIMAL GIVEN
THE QUALITY OF THE LINK. THE G-TOR PROTOCOL ADJUSTS THE BAUD
RATE TO ENSURE MAXIMUM TROUGH-PUT REGARDLESS OF BAND
CONDITIONS.INITIALLY,DATA TRANSFER OCCURS AT 100 BAUD, BUT IF
TRANSFER PROCEEDS SMOOTHLY, THE BAUD RATE INCREASES TO 300.IN
THE EVENT OF PERSISTENT INTERFERENCE OR POOR BAND CONDITIONS,
G-TOR WILL AUTOMATICALLY ADJUST TO 200 OR 100 BAUD.WHEN BAND
CONDITIONS IMPROVE OR INTERFERENCE SUDSIDES,G-TOR AGAIN
OPERATES AT 300 BAUD.

ONCE DATA IS RECEIVED AND REARRANGED (DE-INTERLEAVED),G-TOR
USES 16-BIT CRC ERROR DETECTION WITH A HYBRID ARQ SCHEME TO
DETECT AND CORRECT ERRORS IN TRANSMISSION.THE CRC CODE IS
CALCULATED BY THE RECEIVING STATION,AND THIS CODE MUST MATCH
THE CRC CODE THAT IS TRANSMITTED WITH THE ORIGINAL DATA.IF THE
CRC CODES DO NOT MATCH,INDICATING THAT ERRORS HAVE
OCCURRED,THE HYBRID ARQ SYSTEM REQUESTS TRANSMISSION OF THE
CORRECTION BITS.THESE ARE THEN COMBINED WITH THE DAMAGED DATA
BITS IN AN ATTEMPT TO RECOVER THE ORIGINAL DATA.THE GOLAY

ERROR CORRECTION CODING CAN CORRECT 3 OUT OF 12 TRANSFERRED DATA BITS,AND DAMAGED INFORMATION IS MOST OFTEN QUICKLY AND ACCURATELY RESTORED WITHOUT REQUIRING RE-TRANSMISSION.

THE G-TOR MODE MAY BE USED IN A VARIETY OF APPLICATIONS INCLUDING "MARS" AND PORTABLE OPERATION,SINCE THE G-TOR PROTOCOL PERMITS UP TO 10 CHARACTERS FOR A CALLSIGN,ALLOWING "MARS" CALLS OR SPECIAL IDENTIFIERS.

DO YOU LISTEN TO THIS BROADCAST? DO YOU ENTER ANARTS CONTEST? WHY NOT SUPPORT ANARTS EFFORTS TO BRING DX TO ALL THE AMATEURS IN AUSTRALASIA.

jOIN THE SOCIETY AND BE PART OF THIS. COST IS ONLY TEN DOLLARS AND YOU WILL BE ASSISTING IN BRINGING DX NEWS AND OTHER TECHNICAL ITEMS TO ALL. SEND TO: ANARTS, PO BOX 860 CROWS NEST NSW AUSTRALIA 2065.

WEEKLY SOLAR AND GEOPHYSICAL REPORT

(31 MAY - 06 JUNE)

ISSUED ON 07 JUNE 1996

SUMMARY

Date 31 01 02 03 04 05 06
10cm 68 68 68 69 69 71 72
A 8 5 5 4 7 7 (20 ESTIMATED)
T 7 4 9 4 5 3 6

SOLAR ACTIVITY WAS VERY LOW DURING THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET ON 31ST MAY, 2ND TO 5TH JUNE, QUIET TO UNSETTLED ON 1ST, AND UNSETTLED ON 6TH.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE NEAR PREDICTED VALUES ALL WEEK. SPREAD F WAS OBSERVED DURING LOCAL NIGHT ON 5TH JUNE.

FORECAST (07 JUNE - 13 JUNE)

SOLAR: VERY LOW

GEOMAGNETIC: MAINLY QUIET WITH THE CDHANCE OF SOME MILD ACTIVITY

FREQUENCIES: NEAR PREDICTED MONTHLY VALUES

COURTESY OF IPS RADIO AND SPACE SERVICES

ARLD027 DX NEWS

THIS WEEK'S BULLETIN WAS MADE POSSIBLE WITH INFO PROVIDED BY TEDD, KKKPNW, THE OPDX BULLETIN,'AND CONTEST CORRAL FROM QST. THANKS TO ALL.

LIBYA, 5A. 5A1A OPERATIONS BY UKRAINIANS AND LIBYAN NATIONALS HAVE BEEN APPROVED FOR DXCC.

GREENLAND, OX. ATTENTION 6 METER OPS. PETER, OX3XR, IS ACTIVE ON 50.110 MHZ RUNNING 60 WATTS TO A YAGI. HE IS LOCATED IN NUUK, GRID SQUARE GP44DD.

DODECANESE, SV5. MANFRED, DL8SET, WILL SIGN SV5/DL8SET FROM RHODES JUNE 6 TO 20 ON BOTH HF AND 6 METERS. QSL DIRECT OR VIA THE BUREAU TO DL8SET.

SOUTHERN COOK ISLANDS, ZK1. BRUCE, AA8U, STAN, K8MJZ, AND MARILYN, AG8W, WILL BE ACTIVE FROM RAROTONGA JULY 11 TO 21. THEY WILL SIGN ZK1AAU IN THE IARU CONTEST, AND ZK1MJZ AND ZK1AGW OUTSIDE OF CONTEST HOURS. QSL TO AA8U.

MARION ISLAND, ZS8. A FEW REPORTS INDICATE THAT CHRIS, ZS8IR, HAS BEEN ACTIVE. ON MAY 21ST, HE WAS REPORTED ACTIVE ON 3799 KHZ AROUND 1345Z AND 2100Z. ON MAY 18TH, HE WAS HEARD ON 14195 KHZ AROUND 0700Z. HE WILL BE THERE UNTIL JUNE, 1997.

LIECHTENSTEIN, HB0. FROM JULY 14 TO 27, DL1JBN, DL3JSW AND DK5YY WILL BE ACTIVE ON HF, WHILE DG0JAG, DG0JS AND DG0OKA WILL DO VHF AND SATELLITES. VHF AND SATELLITES WILL BE THE MAIN EFFORT THE FIRST WEEK WITH CONCENTRATION ON HF THE SECOND WEEK.

MONACO, 3A. RALF, DL3JSW, OF THE HB0 TEAM MENTIONED EARLIER, WILL TRAVEL HERE JULY 14, AND WILL TRY TO OBTAIN LICENSES FOR BOTH 3A AND SEBORGA.

BAHAMAS, C6. ROBERT, K4MQG, WILLIAM, AA4R, AND TED, WA4VCC, WILL BE ON GRAND BAHAMA ISLAND JUNE 7 TO 14, AND ACTIVE ON 6 AND 2 METERS, 70 CM AND HF. THEIR STATION, WITH ANTENNAS ATOP A 3-STORY BUILDING LOCATED ON THE OCEAN SHO E, WILL BE VERY ACTIVE DURING THE ARRL VHF CONTEST JUNE 8, 9 AND 10. THEIR GRID SQUARE, FL06, HAS NOT BEEN UP ON VHF FOR SOMETIME.

THE OHIO/PENN DX PACKETCLUSTER
DX BULLETIN NO. 254
EXCERPTS

THANKS TO THE NORTHERN OHIO AMATEUR RADIO SOCIETY, NORTHERN OHIO DX ASSOCIATION, OHIO/PENN PACKETCLUSTER NETWORK, N6EK, N8AC, W9JOO, AH0W/OH2LVG, DF4RD, DL7VOA, DL9GOA DX NEWS

LETTER, F6AJA, G4BUE DX NEWS SHEET, GM4FDM, HS0/G3NOM, PA3ERL, PA0GAM/YB3AQE AND SM0OEK FOR THE FOLLOWING DX INFORMATION.

6Y, JAMAICA. THEO, PA3ERL, WILL BE ACTIVE AS PA3ERL/6Y5 FROM JUNE

13-29TH. HIS PLANS FOR BAND ACTIVITY AND OPERATIONS WERE NOT RECEIVED. QSL VIA PA3ERL.

9L, SIERRA LEONE. BALDUR, DJ6SI, IS CURRENTLY ACTIVE AS 9L/DJ6SI. HIS LENGTH OF STAY IN UNKNOWN AT THIS TIME. HE GENERALLY OPERATES MAINLY CW BUT HAS BEEN HEARD ON SSB. ACTIVITY SHOULD BE ON ALL BANDS, ESPECIALLY WATCH THE WARC BANDS.

9M0, SPRATLY ISLANDS. JAAN, SM0OEK, CURRENTLY ACTIVE AS 9M2JJ IN MALAYSIA, IS THINKING ABOUT GOING TO PULAU LAYANG LAYANG (WHICH IS ONE OF THE ISLANDS IN THE SPRATLYS). PLANNING IS IN THE EARLY STAGES AND JAAN IS SOLICITING HELP FROM LOCAL HAMS IN MALAYSIA AND ANYONE THAT CAN PROVIDE INFORMATION TO GET THIS DXPEDITION AFOOT. JAAN CAN BE CONTACTED VIA INTERNET: SM0OEK(AT)PC.JARING.MY

BRITISH AMATEUR RADIO TELEDATA GROUP (BARTG/GB2ATG) NEWS BULLETIN WOULD LIKE TO REMIND EVERYONE THAT THE A.N.A.R.T.S. WW RTTY CONTEST STARTS 0000Z SATURDAY JUNE 8TH UNTIL 2400 SUNDAY JUNE 9, 1996 (SECOND FULL WEEKEND IN JUNE EACH YEAR.). BANDS TO BE USED ARE 80, 40, 20 15 AND 10 METRES. MODES TO BE USED ARE ALL DIGITAL MODES PERMITTED (RTTY, AMTOR, FEC, PKT, PACTOR). NOTE? NO SATELLITE OPERATION PERMITTED.

IOTA NEWS... TOM, GM4FDM, REPORTS THAT HE AND GM3NIG, GM3UTQ, GM4YMA AND GM3COB HOPE TO ACTIVATE IOTA EU-111 FROM THE MONACH ISLANDS SOMETIME IN EARLY JUNE. THIS IOTA GROUP HAS NOT BEEN ACTIVATED SINCE 1988/89, AND IT SHOULD BE QUITE SOUGHT AFTER. THE CALLSIGN AS OF YET IS UNKNOWN, BUT THEY MIGHT USE GM5VG/P. QSLS VIA THE BUREAU OR DIRECT WITH SUFFICIENT RETURN POSTAGE TO GM3UTQ.

DIDIER, F6ELE, AND BERTRAND, F6HKA WILL BE ACTIVE FROM MOLENE ISLAND IOTA EU-65 (LOCATED IN THE BRETAGNE -FINISTERE WEST-REGION GROUP) JULY 25 TO 29TH.

OH0 ? OI0, ALAND ISLANDS. HADI, DJ2PJ, AND PETER, DL5FF, WILL BE ACTIVE AS OH0JWH AND OH0JWL, RESPECTIVELY, FOR THE SECOND TIME AGAIN FROM OEVERBY ON THE ALAND ISLANDS (JP90TF). THEIR ACTIVITY WILL BE FROM JUNE 7-14TH. THEY WILL BE ACCOMPANIED BY RAINER (OH0/DL1ZBO) AND KARL (OH0/DL4FAN). OPERATIONS WILL INCLUDE ALL HF BANDS AND 50 MHZ ON CW,

RTTY (ANARTS CONTEST) AND SSB. HADI WILL SIGN OI0JWH CW AND SSB ON 6 METERS (50.210 MHZ, WORKING SPLIT IF NECESSARY). QSLS FOR OH0JWH AND OI0JWH GO VIA DJ2PJ, OH0JWL AND OI0JWL VIA

DL5FF AND THE OTHERS TO THEIR HOME CALLS. FOR SCHEDULED CONTACTS, HADI CAN BE CONTACTED ON PACKET RADIO: DJ2PJ?DB0GV.?HES.DEU.EU OR INTERNET E-MAIL: DJ2PJ?T-ONLINE.DE

YB3OSE QSLS. BOB, W7TSQ, (QSL MANAGER FOR YB3OSE) REPORTS HE HAS RECEIVED THE LOGS COVERING APRIL, 1995, THROUGH MARCH, 1996, (AND APRIL, 1996, IS IN THE MAIL) FROM ACHMAD, YB3OSE. ALL OUTSTANDING CARDS WILL BE IN THE MAIL SOON.

COMING EVENTS

JUNE 8TH-9TH ANARTS WW DIGITAL CONTEST

Society information

HURRICANE FREQUENCIES
Unless otherwise noted, times are UTC, freq in kHz, modes USB or LSB)
Revised June 16, 1996

The following hurricane season intercepts have been gleaned from numer-ous sources. Times and frequencies are subject to frequent change, and are listed for reference only. If you copy this list, credit the author. Do not remove update request and e-mail address. This is the only way I can keep the list updated! A special thank-you to all who have contributed information. Enjoy!
Bill Snyder AA6KC

Whenever a hurricane is within 300 miles of land in the northern western hemisphere, the Hurricane Watch Net is operational on 14325 kHz USB. The Hurricane Watch Net provides communication between the National Hurricane Center and the affected areas.

During a communications emergency, W1AW transmits special voice bulletins on the hour on 1855, 3990, 7290, 14290, 18160, 21390 & 28590 kHz.

The National Institute of Standards and Technology broadcasts storm warnings on 2.5, 5, 10, 15 and 20 MHz AM according to the following schedule:

WWV hh:08
WWVH hh:38

WLO in Mobile, Alabama broadcasts NWS marine weather observations, forecasts and hurricane tracks, as well as NHC advisories, on the following time-slot schedule during hurricane season:

CW: 4343.0 6416.0 8514.0 12886.5 17022.5 22487.0 kHz
FEC: 4250.0 6344.0 8534.0 12992.0 16997.6 22688.0 kHz

Hi Mark, You're the second one today that mentioned we're being threatened with the loss of HF spectrum. What leads you to believe this fallacy? The only loss we've encountered in the last 35 years was the 11 meter band. But what we've gained (12, 17, 30, and all of 160M) far outweighs that loss.

And do we really need an additional 300,000+ hams on HF? You must hate HF to wish that upon us. 600,000 of us can fit nicely on V/UHF, especially if more folks would use simplex like they're supposed to (why blanket 5,000 square miles [assuming a rptr with a 40 mile radius] with your repeated signal when the fellow is within simplex distance of you?). But placing all 600K of us on MF/HF (a mere 3.75 MHz), where if you so much as sneeze half the world might hear you, is foolish. HF is already jammed with wall-to-wall signals, especially on weekends.

And finally, the CW requirement is not obsolete. With it we are assured that *every* HF ham has at least one mode in common. Without it, we're partitioned into a disjoint collection of operators only able to communicate with those who share our favorite mode. That would be a terrible loss of such an important capability.

Jeff KH2PZ / KH6

Hi Steve, Have you bought your wife/girlfriend jewelry? Are you aware such items are marked up anywhere from 500 to 1000%? That $349 price you quoted is only an 80% markup. So you're correct, that isn't a bad markup at all; it's quite reasonable.

>>>Photons travel at the speed of light. :-) Radio signals are photons.

>>How many photons are there in a CW dot?

If a radio wave consists of photons, and photons are particles, and particles have mass, and weight equals mass times accelleration due to gravity (9.8 m/sec^2), then how much does a 100 watt CW dot at 7125 kHz radiated from a 1/2 wave dipole antenna with an SWR of 1.2:1 located 40 feet up weigh ? (Assume that the dot is a 20 wpm character)

If anybody figures this out, please let me know!

There seems to still be disagreements among historians and scholars as to the general attitude of the German population during this time. However, your point is well taken.

My first wife was German and I was got married there. Her father and two brothers served in the German Army, Air Force and Marines and were all captured. By mere coincidence, they all arrived home on the same day. Her father worked for the Bundespost (German Post Office). None of the family ever belonged to any of the Nazi organizations (which was difficult as government employees were expected to). None of them shared the Nazi ideals. They did have the required picture of Hitler and a copy of Mein Kampf, but they were only brought out into view if they had a visitor they did not know or trust.

During the war, Jewish prisoners were used for maintenance around their apartment building. It was obvious they were not receiving sufficient food. My ex-parents-in-law would wrap up food and put it the garbage cans for the prisoners. If they had gotten caught it is quite possible they would have been killed. Not ever having gone through something like that, I cannot imagine how much courage it took to perform an act that could easily end up in death.

Anyway, certainly not all Germans were accomplices of the Nazis

And, it still amazes me that folks keep overlooking Josef Stalin who had 20 million people killed, over three times the number in the Holocaust.

ken@g4mpq.avel.co.uk (Ken Clark) wrote:

>As a new reader of only a few days I must say that this column is
>giving me a few laughs mixed with a little sadness too. Still, I would

It saddens me too Ken. Because this type of discussion has no
place in an amateur radio newsgroup, and because it was started
by our resident HAM-A-ROID Burt, who did so only to stir the pot.
Burt is the only one who gained anything from this discussion, as
he is sitting back laughing at all the hate and discontent he has
caused.

It saddens me that people keep this discussion going here, not
that I am wasting my time reading all this junk, but I am wasting
my time telling my newsreader to ignore all the messages with
new titles (like yours) that are just a contiunuation of the same old
discussion.

It saddens me to think about a friend I lost in Viet Nam, but that has
nothing to do with amateur radio.

It saddens me to see writers for whom I have respect let themselves be
sucked into this discussion.

Lots of things that have happened in history sadden me. But
history is over, and so should this discussion in any of the amateur
radio newsgroups be.

I think the participants in this discussion should have the free right
to discuss it if they wish, but I think they should discuss it
elsewhere. I'm sure those who wish to continue it can find the
appropriate place if they go look for it.

Anyone who posts any more to any of the threads that have spawned from
Burt the HAM-A-ROID's original post should be smart enuff to realize
that all the only thing they are accomplishing is to give old sick
Burt a few more laughs.

> No, this isn't the right news group, but it is an interesting
>subject!
> 73, Fred, K4DII

Think about this for a minute, Fred. I have cell phones I use for my business. If I wanted two on the same number, would I a) go to the cellular company and ask them to do it for me or b) ask a bunch of people I thought were electronics wizards to do it for me ? If your answer is B, then you obviously are doing something you don't want the cell phone company to a) know about or b) charge you for.

Who is Jeff ? Have you met him ? Did he give a ham call in his post ? In my mind, Jeff is a) somebody who is trying to beat the phone company, or b) somebody from the phone company trolling for people who can tell him how to beat the phone company so he can in turn beat them.

Jeff's message isn't an 'interesting subject'. It's a discussion of doing something illegal. Like installing filters to beat the cable company. Like stealing satellite TV signals. My cell phone bills are

higher than they would be if criminals weren't already stealing millions of dollars worth of cellular calls. So, in my opinion, Jeff's message isn't an interesting subject, it's bullshit, and Jeff can take a hike.

>jbasinger@skybest.com

Coleman makes a bunch, but they break a lot. I know you know
Honda makes a good one but it is expensive, but I have a Honda.
It's 600 watts, will charge 12 volt batteries, is *very* quiet,
always starts when I need it, and is about 10 years old. The only
thing I have ever done to it is put gas and oil in it. I've been
thru a few Colemans, and a Homelite. In an emergency, I would
imagine you would want a generator that works, not one that
needs to be returned for repair, so I would suggest you bite the
bullet and spend a few extra bucks and get the Honda. I doubt
you will be sorry.

Why would you integrate the area? Assuming the area is constant gives
you an integral of a constant. So now you've got a linear function in t:
f(t) = (area)*t. Now what?

Actually, the wave is propagated by means of each water particle moving
in a circle; the radius of each described circle decreases with water depth.

Good afternoon Curtis,

At 0530 HST I called the Washington FCC office. Here's how the conversation went:

Me: I have a legal question regarding out-of-band CBers operating in the 10M ARS band.

FCC: Sure - go ahead.

Me: If an amateur attempts to start, or maintain, a conversation with another amateur on the same frequency over the top of a couple out-of-band operators, could that be construed as malicious interference?

FCC: I'd say no.

Me: Okay, now what if those illegal operators shift to another frequency on 10M, and the amateur also shifts with them in an attempt to start, or continue, a conversation with another amateur - would you consider that malicious interference?

FCC: You'd have to ask ``Interfering with whom?'' You're not interfering with an authorized transmission on that band so you are not causing interference. You would always have to ask ``Interfering with what or whom?'' to complete the picture. Thus, I would say you are not causing interference.

The conversation continued with me thanking him for their proposal to stop the sale of easy-to-modify out-of-band amateur equipment.

If you'd like to verify the above, you can call 800-322-1117 (FCC Consumer Assistance) and when you finally get to talk to a living person, tell them you have a legal question regarding interference within the Amateur Radio Service. They well transfer your call (make sure you have something to pass the time with - I was able to grade a stack of papers while waiting); someone with knowledge of the ARS will eventually come on the line.

73 from Hawaii,
Jeff KH2PZ / KH6

I was on the ham conference in RIME for 8 years, the above tactics did
not work. Hams cannot control their mouths, much like you,
If you want to get me bored let me listen to ham radio.

Not at all. I am surprised this topic got so deep into politics.
I was hoping people would read the book and that Germans are
not a people we should generally admire.

> It saddens me to think about a friend I lost in Viet Nam, but that has

> that all the only thing they are accomplishing is to give old sick
> Burt a few more laughs.

I am not laughing. Actually I am proud that there are at least a few
hams that have a life OUTSIDE of this deadly dull hobby.

Rectangular shmectangular. When you quantize the EM field, the canonical
method is to quantize in a box and let the box size go to infinity. When
you keep a finite-size box, you run into other difficulties.

>doesn't give exactly the correct answer. You really need to take the
>integral of the area under the pulse. If the CW envelope were a true
>rectangular pulse, then we'd have sidebands out to infinity, and that

Ahhh...here you go. Now you've got an infinitude of frequencies (and
therefore your energy reads E=sum_n (hbar * (# of photons in state n) * f_n)
The only time you can talk about a single-mode is when you've got a plane
wave going off to +/- infinity. (Well, you could also do it with periodic
boundary conditions, but those don't exist in our case.)

>>>In layman's terms, the answer is simply "lots" because Planck's
>>>Constant is a very tiny number indeed.
>>Which is why we don't have to worry about the particulate view of light

You can deal with radition pressure completely classically (see Jackson
p.265 (actually it's a problem, but the answer is the formula you need)).
If you're talking about "single-photon" signals (as in maybe some
radioastronomy) then you're out of the realm of layman's terms.

(*****
The following is a QST

The first Vanity call signs are issued, a court drops illegal scanner charges again a Kentucky teen and a friend of ham radio retires from the FCC.

(*****
FIRST VANITY CALLS ISSUED

The first Vanity Call Signs under Gate One of the program have been issued. Nine vanity calls were granted on Tuesday, June 4th with another eight issued in Wednesday June the 5th.

According to the FCC, more than 350 applications were received on May the 31st. As we go to air, they do not have a complete count on the number received.

(*****
FCC TO BACKFILL HOLES IN SEVENTH DISTRICT

Because of a computer programming snafu, the FCC says that it inadvertently skipped over a chunk of seventh district call signs in the sequence KC7RAA to KC7ZZY, and jumped instead to the KD7 call sign block. The Commission intends to leave the current 149 grants as is and to go back and fill in the KC7RAA to KC7ZZY group first. After that it will pick up where it left off.

The FCC took a different tack when about 50 Group D call signs were similarly skipped in the fourth district. Instead of issuing the skipped block out of sequence, the FCC deleted those grants and issued new call signs from the originally intended sequence.

(*****
SPECTRUM GRAB UPDATE

A ham radio fax and electronic mail campaign to members of the Little LEO Working Group that has proposed reallocating two popular amateur bands seems to be taking its toll. They have not reversed their stand on grabbing the 2 meter and 70 centimeter ham bands, but that are literally begging hams to back off on e-mail to the committee.

The Internet and FAX technology have taught the FCC a lesson. Propose a commercial satellite service sharing amateur radio's two most popular bands, and you can count on a landslide of response. When word first got out that an Informal Working Group to the World Radio Conference '97 was considering the two bands for possible shared access, the names and addresses of Committee Members were made available for comments. Those comments came first by the dozens, later in the hundreds, and now the thousands and they're still coming.

On June 5th, the FCC announces it's time to make the comment process more efficient. The Commission sets up a designated office and electronic mail address for all comments.

Commenters are then told to refrain from sending their thoughts directly to the working group's members.

So, is this really streamlining the way comments by concerned amateurs will be heard by the people who will ultimately decide the fate of these two ham bands? The Commission sez comments already sent will be included as part of the public record and that its staff will ensure that comments sent to the new addresses will be considered. But not everyone believes that.

"My opinion, this is a brushoff by the FCC. They individually don't want to be inundated with our comments." KL7Q

Tom Moore, KL7Q, is the ARRL's Section Manager for Alabama. He sez the Commission's latest tactic is its way of dodging public comment by hams and sending those comments to an unattended dead-end mailbox.

"Do you think for one second they're gonna sit around for hours and hours reading thousands of our comments or attend to regular committee business. Instead, it is my belief the FCC will appoint someone to review

our comments and to brief the committee with a report of significant data, something like we received 10,976 comments opposed to reallocating the amateur bands." KL7Q

That, Moore sez, will make it easier for the Commission to bypass the opposition. In other words, a fast one being pulled on Capitol Hill. League Vice President David Sumner, K1ZZ, sez political rather than technical judgement has already influenced the Working Group's list of bands being considered for sharing with the satellite service. Again, Tom Moore.

"Wait a minute. Somebody isn't tellin' the whole story here. The ARRL sez some frequencies are not included probably due to political judgement, yet the FCC sez all frequencies below 1 GHz are being reviewed. Couple this with the FCC now trying to send our comments off to a nonperson, deadend mailbox. And well you can draw your own conclusions. We have very politely been told to kiss off." KL7Q

That brings the next question. How do hams stand a better chance of making sure their comments really are heard?

"I advise hams to continue sending them to the individual addressees. That is the only way we are going to get their attention to put enough political pressure on them to make the decision to take them off the list." Kl7Q

Moore sez radio amateurs need to keep the pressure on the FCC. And he suggests contacting your local Congressman and explaining the seriousness of the threat by commercial interests, a threat he calls a flagrant attack on amateur radio.

Since the Working Group's reallocation proposal could change hour by hour during the next few weeks the ARRL is advising hams to stay abreast of the very latest developments. You can do that by checking in to the ARRL's Web Page on the Internet. And, of course, we'll continue to have the latest on this for you here on Newsline.

(*****
SCANNER CHARGE DROPPED AGAINST KENTUCKY TEEN

A Kentucky judge has dismissed a charge of carrying a scanner that can receive police frequencies filed by police against a teenage ham. These were the charges filed against a 16 year old Greg Godsey, KF4BDY who was arrested on May 11 by local police in Christian County Kentucky, who confiscated his Radio Shack HTX 202 2 meter transceiver. Police claimed that the transceiver was actually a scanner capable of overhearing private communication.
No HTX 202 has ever been successfully modified to operate outside of the ham bands. The police finally gave in on this point and Greg's radio has since been returned. But other charges not specifically related to his Amateur Radio activity have been continued until later this month.
Greg, who had been the ARES Emergency Coordinator for Christian County, and who only became a ham last year steadfastly denies the charges. He

says that his radio was not modified and cannot receive or transmit outside of the 2 meter band.
His parents, Gary and Fredericka Godsey, say Greg has never been in trouble. They have hired an attorney to represent him. None the less, he did resign as EC after his radio was confiscated.

(*****
CORDLESS BLUNDER

Karl Quinton Chandler of Florence, Alabama, probably wishes he had not made one particular phone call using his cordless phone. Back in 1994, a police officer using a scanner overheard Chandler discussing a drug deal. The officer recorded the conversation and Chandler was later arrested and convicted on heroin possession charges. Chandler's lawyers asked the Alabama Court of Criminal Appeals to overturn the conviction. They cited federal laws that prohibit police from intercepting electronic communications. But on May 10th, the Court ruled against Chandler. The Court says the federal law Chandler cited excluded cordless telephone conversations. Karl Chandler now faces 10 years in prison.

(*****
HALLER RETIRES

FCC Wireless Telecommunications Bureau Deputy Chief Ralph A. Haller, N4RH, has announced he's retiring. Haller, 48, has spent 25 years with the FCC, including eight years as head of the Private Radio Bureau.
Haller who lives in Arlington, Virginia, has been one of ham radios strongest supporters at the Commission. He was one of the driving forces behind the creation of a so called single point of contact between the repeater coordination community and the FCC. His retirement may have a negative impact on the creation of this government to private sector cooperative relationship so badly wanted by the coordination community.
If we may digress from our news reporting and get personal, we at Newsline join with the rest of the nations ham radio community to thank Ralph Haller for the many hours of his time he has given in trying to make the United States Amateur Radio Service, a bit better place. We also wish him success in whatever position he takes on in the future.

(*****
FCC CHANGES PC AUTHORIZATION REQUIREMENTS

In a move aimed at getting personal computers and PC accessories to market faster, the FCC has adopted new rules to relax the equipment authorization requirements for such products. Instead of requiring FCC certification, the new rules allow a self-authorization process where PC manufacturers or suppliers issue a Declaration of Conformity with FCC standards for limiting radio frequency emissions.
The new rules permit manufacturers and suppliers of personal computers and peripherals to put a product on the market after testing it to ensure compliance. This, instead of having to apply for equipment authorization and await FCC approval.

(*****
NEW WAY TO SELL HAM GEAR

Don't be surprised to see ham radio equipment showing up in such diverse places as Marine Radio shops, retail appliance stores, mass merchandisers and even on the Home Shopping Club. This in direct response to Radio Shack having cornered the lions share of the burgeoning no-code entry level market.
With few exceptions, companies, both foreign and domestic, say that they cannot remain in the United States Amateur Radio market place without getting a share of the multi million dollar no code pie. That without it there will be no way to continue providing equipment to the upscale high frequency and experimental VHF and UHF markets.
Until now, no company other than Radio Shack has had an aggressive marketing program to the general public. That is now changing as company after company takes its radios, accessories, antennas and training aids to the American masses using the same targeted marketing techniques used to sell other consumer products.
And for those of you who think it is illegal to sell ham gear to people not licensed to use it, that's not the case. In fact, it is actually a violation of federal trade law not to sell equipment to someone who wants it unless they willingly say that it will be used for illegal purposes. The government says that it is not up to the manufacturer or retailer to police the market. That's the responsibility of the end user and nobody else.

(*****
NO MAJOR 73 ADS

Some bad news for 73 Magazine. Readers of the June issue were surprised to find the usual ads from the big four Japanese ham radio manufacturers missing. No advertising from Alinco, Icom, Kenwood or Yaesu.
Icom was the last to go. Alinco. Kenwood and Yaesu have been gone for several issues.

(*****
SENATE CONNECTION

There's a ham radio connection in the recent announcement that Kansas Governor Bill Graves has named Lt. Governor Sheila Frahm to succeed Bob Dole in the U.S. Senate. Sheila Frahm is the sister in law of ARRL Midwest Vice Director Bruce Frahm, K0BJ.
Shiela Frahm is a 51 year old Republican, and will serve in the Senate at least until November, when Kansas voters will choose a candidate to fill the last two years of Dole's term.

(*****
SISTER ALVERNA INJURED

One of the founders of the Handi Ham System was injured on in an automobile accident on May 31st while on her way to a hamfest.

Sister Alverna O'Laughlin was in a serious car accident. She was on her way to a hamfest in South Sioux City, Nebraska. She broke her leg and

their said she will probably be in a cast for five to six months.

Get well wishes go to Sister Alverna O'Laughlin, Assissi Heights, 3rd Floor Health Care, Rochester, Minnesota 55903.

(*****
LEBANESE KID PIRATES

From overseas, 5N3AMK reports via packet radio that Lebanese children are bootlegging on 20 meter CW daily. Nagheeb says that they can be found very evening on 14.050, 14.055, 14.060 and 14.070 running traffic between Azerbijan and the Ivory Coast. Some have also been heard on 14.080 SSB running messages between the Ivory coast and Beirut after 18:00 hours UTC. Two youngsters have been identified. One boy uses the name Tony and the only female is Randa. Both speak in Lebanese and when asked for their ham calls, Tony laughed and said that they cannot be stopped.

(*****
NEW M1 QSL SUB MANAGER

And a new RSGB QSL Bureau Sub Manager has been appointed for the recently introduced M1AAA to M1AZZ series of British callsigns. He is Mr. M. Marriott, G0OPC, who is also the Sub Manager for the G1 series of callsigns.

(*****
ARIANE 5 FAILS

The rocket that will carry AMSAT's Phase 3D ham satellite into orbit has failed is first real test. Ground controllers blew up the Ariane 5 40 seconds into the flight at an altitude of about 12,000 feet as it veered off course.
The launch June 4th launch began at 12:33 Universal Time June 4, from the European Space Agency's Kourou launch facility in French Guiana. Ariane 501 carried a group of four scientific satellites known as "Cluster" which were, of course, destroyed as well. No amateur radio satellites were aboard.
It's unknown what impact the launch failure will have on the next Arianne launch scheduled for later this year. That flight will carry Phase 3D.

(*****
SUNSPOT MINIMUM STILL AHEAD

Solar prognosticator Tad Cook, KT7H, reports four consecutive days of zero sunspots for the period May 16th to the 22nd. The average solar flux was down five points from the previous period. Expect similar conditions through the rest of 1996 as we experience the solar minimum.

(*****
DX

In DX, the SK3SIX beacon has gone QRT on 6 meters due to severe damage to its antenna system and failure of the control circuits. SM3EQY and

SM3JGG have brought the transmitter down from its mountaintop location overlooking much of Sweden and are working on a new keying system. When service is done and the new antenna is installed the beacon will returned to service.
And word that a group of Dutch radio amateurs will activate the Republic of Georgia during the coming E skip season. From June 14th to the 26th they will be in grid square the LN21 on the air with the prefix 4L. Listen for them on 50.123 MHZ on SSB.
And the U.S. Island Directory and island list is now available on the World Wide Web thanks to WD8MGQ. There are two versions of the island list to choose from. The "master" version is the most detailed.

(*****
NEW PROFESSOR

A name in the news. James C. Garland, W8ZR, has been named president of Miami University, a 20,000 student institution in Oxford, Ohio. Garland, 53, is now dean of the College of Mathematical and Physical Sciences at Ohio State University in Columbus.

(*****
YHOTY '96 NOMINATIONS SOUGHT

A reminder that the nominating period for 1996 "Young Ham of the Year Award" closes on June 30th. That means you have only sixteen days left to compile a nominating package for the youngster you think should be named 1996 Newsline Young Ham of the Year.
This years winner will receive an expense paid trip to the Huntsville Hamfest the weekend of August 17 and 18 courtesy of Yaesu USA Corporation. The winner will also get to spend a week in Spacecamp Huntsville as a guest of CQ Magazine.
All nominations must be submitted before June 30, 1996 on an official application. Application forms are available by sending a self addressed stamped envelope mailed to the:

Young Ham of the Year Award
c/o Newsline
28197 Robin Avenue
Saugus, California
91350

These nominating applications are also available for electronic download from several sites that provide Newsline materials over the World Wide Web and from the general interest ham radio files area on GEnie and America Online.

(*****
OLDEST BIRD FOUND

The ARRL Letter reports that Justin Dennis, KA0HKV, of Atkins, Iowa, was the grand prize winner of QUEST 43. That was Bird Electronic Corporation's year long competition to locate the oldest working Model 43 Thruline Wattmeter.

Bird says Dennis's Model 43, serial number 71, manufactured in 1952,
still delivers accurate RF power measurements 44 years later. Dennis said
he bought the unit from a friend for $15. It earned him a 24 carat gold
plated Model 43, a $1000 gift certificate and a brand new Model 43.

Charles,

100 watts is sufficient for solid QSOs when the selected band is not too crowded and, of course, the
propagation is good. You might actually have a very strong signal, but with crowded band conditions and other
hams running 1000 watts it's hard to compete.

Of paramount importance, however, is an efficient antenna. Yes, an "inverted-v" dipole at 40 feet can make all
the difference in the world! For 75 and 40 meters they're great. For years I've used an "inverted-v" dipole on
75 meters mounted on my tower, and it has worked very well. At the higher frequencies you really need something
like a multiband yagi antenna or a quad, though. They not only boost your signal, but also attenuate unwanted
signals coming in from the sides and back of the antenna.

Many contacts can be made with relatively low power if you pick the right time and frequency. Also, under
adverse conditions, CW has often been a good mode for contacts.

Good luck, Charles.

73,
Lindsay
WA4ISZ

Charles,

First, congratulations on your recent upgrade. What is your callsign?

I run from 100 to 150 watts (depends on what kind of mood my old Hallicrafters SR-400A is in that day), and have had phenomenally good luck with it. I use a G5RV that I made myself, up at about 45 feet, through an MFJ mobile tuner (300 W rating.)

I rarely have any problem making a contact, and have even broke through my share of pileups. I have worked a fair bit of DX, including Antartica, Australia, New Zealand, Marshall Islands, and a few African stations, not to mention a ton of Europe, Caribbean and South America. And all of this within the last year, at the "bottom" of the sunspot cycle. Most of my contacts are on 75 or 20 meters, since my old rig has no WARC bands.

It really sounds like your antenna situation needs to be improved, and it will make all of the difference in the world.

73 de Jim, KD1YV

3639. Cross mod problem

Newsgroup: rec.radio.amateur.misc

Recently I sometimes hear distorted parts of what must be cordless phone conversations on a very old (and not very good) receiver. My own standard 10-channel cordless does not bother the receiver. What frequencies are used by the newer 25-channel 47-49 Mhz phones? Are the extra channels mixed between the (40 khz?) spacing of the older 10-channel units? I am wondering if some odd combination of IF and harmonics of input to first mixer equal these newer cordless channels.

I assume the even-newer 900Mhz units are not involved. (900Mhz was considered practically infrared when this old box was built. Also, I assume 900Mhz cordless phones are FM -- if they are not spread spectrum, etc.)

Bill

It's not the code/no code debate, but this is close enough to the
way the German government handles sales of transmitters. You can't
walk into a store and buy amateur radio transmitters without a license.
Unregistered posession <sp?> of transmitters is forbidden without a
license (type accepted equipment like CB equipment is licensed).
When I buy an amateur radio transceiver, I have to show my license.
When I want to buy a marine transceiver, I have to show my marine
radio license (I haven't got one, but an amateur radio license will do).
I can't sell/give/lend amateur radio transmitters to anyone without
a license.
Just imagine what would happen if a police officer requested me to
hand over my transceiver, and I would have to refuse unless he showed
me his amateur radio license ;-)

Just my $.02,
Jens, DB9LL

VE6RAC FIELD DAY SITE
==========

Field Day tis year is June 22-23 1996. It starts at noon on Saturday and goes through till noon on Sunday.

The VE6RAC Field Day site is about 25 miles east of Calgary at the farm of Henning Reinwald VE6KX.

Starting from 16Ave and 68 St NE go 32 km east on Hwy 1. You will pass the Hwy 24 junction. The intersection where you turn has a high tension electric wire with orange balls on the wires. Turn right (south) here and go 3.2 km (2 miles). Turn left (east) at the intersection and go 0.8 km (half mile) You will see Henning's beam on the left. There are two houses, Hennings is the second on the left. It takes about 20 minutes from the starting point.

If you wish to camp over, there is room. Bring the family for a weekend of fun and ham radio. For more information contact Ken Oelke at 280-5340 email:ken.oelke@t8000.com

See you there.

Raj VE6RAJ

I would like to offer a suggestion. Let's ask Buuuurt what price he wants for his gear. I will then open an account to take donations of any amount. You in return would get ONE chance for each dollar you donate to win the gear. If he wants 1000.00, we raise the 1000 and do the deed. I will even get an attorney to hold the funds, etc. What do you say? Then we can work on his computer equipment. He teaches at community college, so he will fold for the funds. Let's do it.....

============= comment GM0CSZ / KN6WH
Madjid , The fact that many hams in all age groups enjoy CW does not
mean that these people all insist that the CW requirement must be
maintained and that CW is necessary to operate on HF. I enjoy CW very
much but yet am of the opinion that the CW test at whatever speed
should NOT be a barrier for licenced radio amateurs to get access to
the HF bands. I get the feeling that a number of hams with HF
privileges , having done one or more morse telegrappy tests (possibly
after many hours of training), can't accept that in the (not too
distant) future this requirement might/will be dropped ,so that the
younger/future generation of hams get HF access 'for free' eg without
having to make the effort ; I call that the 'jalousy factor'. Their
objection has nothing to do with the requirement to operate on the
HF bands in a responsible manner.
Enjoy our common hobby , including the mode named CW ,so do I ,but
please don't unnessarily impose the morse telegraphy requirement on
prospective HF bands users.
Being 'considerate' is supposed to be one of the characteristics of all hams.

3646. Kenwood Ham equipment to be sold at truck stops?

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-17 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseDt4Ap8.2x9@netcom.com>
Source record: 222821

copied from packet:

From : N1RLO @ K1UGM.#EMA.MA.USA.NA
To : INFO @ ALLUS
Date : 960613/2345
Msgid : BF 2741@K1UGM, 11127@W6VIO $K1UGM2741
Subject : KENWOOD RADIO SELLING AT CB STORES
Path : K6VE!K6VE!KB6JES!W6JBT!WB6DGR!WA6BGS!KC6UQW!W4DPH!KO4KS!WB0TAX!AE1T!WA
1WOK!WB1DSW!K1UGM

I guess the rumor I heard that Kenwood communications corp manufacturers of
amateur radio gear are "gearing up" to sell the kenwood line at truck stops
and cb radio stores throughout the US is true.
One ham sent a message saying there are ham stores in his community and
this is great because it would enable him easy access to ham radio gear.
Well I live in Massachusetts where there are no ham radio stores to the best
of my knowledge and I dont mind travelling to NH or RI or mail order.
But to push radios at truck stops and cb shops and not to licensed ham
operators will present a real problem to the amateur in the future. I know
there is no law or rule against selling to non hams and maybe there should
be. I bought a 2 meter HT at Radio Shack on Cape Cod a few months ago and
they would not sell me the ht without seeing my license in hand. The salesman
said there is no law restricting a sale to a non ham but it is store policy
to check for a license he also said Radio Shack did not want any problems
with the ham community. I have a lot of respect for that policy. I said
there are no ham stores in Mass. I should say except Radio Shack co.
All in all I have stopped at truck stops while travelling and you can buy
just about anything there. Now when I am at a truck stop having coffee and
I can watch people buying ham radio gear - their first 2 meter HT and fire it
up in front of me and call for a breaker good buddy and they paid good money
for it and they will use it. As if we dont have enough bootleggers on the air
now. Well its against the law to transmit on ham radio without a license you
say well back several decades ago it was illegal to transmit on cb without a
license and cb had strict enforced rules and regs. Then the cb boom came on
and everyone and his brother were selling cb's and the market bottomed out.
The craze was over a lot of radios were sold and cb turned into the crazy
band unenforceable to say the least. My fellow hams that could happen to
ham radio too. Just think about it. Kenwood will sell a lot of radios and the
hobby will suffer.
The day i see a kenwood ham radio for sale at a truck stop or cb hangout
this ham won't purchase another piece of Kenwood gear.

Time slows in a black hole, so perhaps its possible for a second
to stretch into infinity. Time is relative to each who is
experiencing it, so stay away from black holes.

I believe Stephen Hawkings has some kind of theory that
when the universe implodes to a point of singularity,
time itself ceases to exist. Time can not exist without space?

Back to newsgroup topic, errr, you need time and space to transmit on HF.

Sounds like an appropriate use for the soon-to-be-on-the-market Family
Radio Service (UHF short-range) radios. Radio Shack and others should
have 'em for sale within a few weeks, I would imagine. The expectation
seems to be that they'll be in the $100 - $150 range.

It sounds to me like this guy is out of his mind! What in the world is he
getting after the amateurs for?

Is there any chance that other radio services are getting started an he
wants to give them the amateur frequencies?
Maybe he is frustrated because the amateurs have cause problems on the air
but no one has done anything about it.
Let me know your views on this. I totally back you up.
Send your message to ericp@teleport.com. I am an amateur myself and I
agree with you.

>you quoted is only an 80% markup. So you're correct, that isn't a bad

Well, if stores around you have a 500+% markup on jewelry, you're shopping at the wrong stores! My father is a jeweler, and a district manager of one of the largest jewelry chains. While some markup is 300% (rarely), most is 100-200%. Why? Long shelf life. Average diamond ring sits on the shelf for 15+ months. That's a long time, compared to most retail outlets. Gold (bracelets, necklaces, etc) has the highest markup (200-300%), but are often sold at 50% off (bringing markup to 100-150%)

Well, back you your regular ham programming.

The Victor
By: C.W. Longenecker

If you think you are beaten, you are.
If you think you dare not, you don't.
If you like to win but think you can't,
It's almost a cinch you won't.
If you think you'll lose, you're lost.
For out in the world we find
Success begins with a fellow's will.
It's all in the state of mind.
If you think you are outclassed, you are.
You've go to think high to rise.
You've got to be sure of yourself before
You can ever win a prize.
Life's battles don't always go
To the stronger or faster man.
But soon or later, the man who wins
Is the man who thinks he can.

Are we stereotyping ALL truckers as mindless "CBer" types ?
I understand that this SALES IN TRUCKSTOPS thing **WILL** (not could)
create a big mess, however right here in RIVER CITY there are several
AMATUER RADIO operators who just happen to be TRUCKERS - - - The HF
rig in the rig sits right next to the 2mtr/70cm, and they both share
the rack wth a CB. According to him there are LOTS of LEGITIMATE
LICENSED AMATEURS who are cross-country truckdirvers. One trucker
and his wife are BOTH amateurs - he is an EXTRA, she a GENERAL. they
both dirive seperate trucks and have SKEDS with one another as their
paths criss cross across the nation. (actually just to CA, MT, and
points inbetween) Perhaps it is just a local merchant meeting a
DEMAND. let's face it, if you are on the road six or seven days a
week, it's a little hard for the UPS man to deliver your package from
A.E.S.

Fine, increase the difficulty of the exams - I would honestly be in favor
of that. I would especially like to see more formulas included and *not*
allow use of calculators. Basic algebra and extraction of square roots
by hand should have been mastered in the classroom.

>Seems to me one of the reasons that pro-code-testing hams want to maintain
>the CW requirement is they feel inadequate about their technical knowledge
>and are against increasing the technical difficulty of the written tests.
>They have chosen to be good in a skill that doesn't matter anymore and are
>understandably afraid of the future.

What lead you to come to such a conclusion? Gary C. is the only one who
desires that the tests be an "entrance exam, not a final exam." But if
you do make the exams too difficult you might just end up with no one
except technical folks; remember $97.1 asks us to be more than just
technically oriented.

Now if you had asked, I would have told you that keeping the code require-
ment insures us that *all* HF-licensed hams have at least one mode in common
(and one that can be deciphered mentally rather than having to rely on fragile
devices). Delete the code tests and you've partitioned us into disjoint groups
according to our favorite mode. If the Government has to mandate that we have
at least one mode in common, so be it.

Jeff "Keep the code and include more math" KH2PZ / KH6

P.S. Cec, my rebuttal to your "Seems to me..." vision could have been
"Seems to me one of the reasons that anti-code-testing folks are so
against the requirement is that they don't want to master a particular
mental skill when it's less work to allow a machine do it. Too bad they
have to rely on a box to do something that their mind has the capablilty
of doing." But I chose not to include that argument.

P.S.S. Allow the followup to proceed to r.r.a.policy.

The question to be resolved is whether his CQs are "malicious
interference." If someone answers, he will start up a QSO.

>> >Let me ask you the following: When a jammer pops up on your local 2m
>> >repeater, do you give him a clear frequency to do his jamming? Seems
>> >to me that if someone keyed over him you would see it as "jamming or
>> >interfering." How about if two bootleggers appeared on the repeater?
>> >Would you QSY to another rptr? Or would you continue to carry on your
>> >QSO over them? Isn't the policy on most machines that of ignoring the
>> >jammer and continue normal use of the rptr as if the criminal isn't
>> >even there? Is that policy wrong?

>Yep...ignore him.

In other words continue your QSO over him, right? Why isn't that "malicious
interference" yet when my buddy on 10m does that you change your opinion?

>If it's an illegal station (as in unlicensed) you're
>not supposed to communicate with it anyway.

No one mentioned attempting to QSO with the criminals.

>SOP around here (on the
>machines I have a control op interest in) is to ignore the jamming
>station if possible. If this is not possible, the repeater gets shut
>down for while and we QSY to another (the other). But we do not start
>"jamming wars". It's quite effective...we have very little trouble with
>jammers on our repeaters.

My friend on 10M is not jamming - just sending CQs

>Fine idea. I support tracking down jammers. But I wonder what most
>people do when they find the responsible party.

And how does one track illegals on 10M? Airfare is too expensive to
fly to the Philippines and other South Pacific areas (which is where
we suspect these transmission are originating from).

>Curtis

Ah, now I know who "C" is - nice to meet you Curtis!

RTTY software is available on Compuserve in the Hamnet forum, among
other places. Typically, HF RTTY is around 14.080-090 and 7.070-090,
among other places. Amtor & Pactor (more advanced rtty-like digital
modes) are 14.065-085 and 7.070-090.

Follow-up:

I have been in contact with Ranger in California and found out that
the difference in the new 2950 vs the older model is that they have
incorporated the CPU & LCD Board into a single board.

Would this effect the modifications for Frequency Range, CB Channel
Readout and Tuneup of this radio?

If so, does anyone have the updated mods? Please e-mail them directly
to me at "rc1720@cwconnect.ca".

Cheers! . . . /Wayne

From: dg198@FreeNet.Carleton.CA
Message-ID: <4q3q4h$g97@freenet-news.carleton.ca>
Source record: 222911

Well, I guess I'll commit myself to this discussion and put
forward my idea of travelling radio waves.

1. Does a radio wave really travel from point A to point B
at the (or near) speed of light (universal constant)?
Or does the emission of R.F. from an antenna create a
distortion in a medium which induces a distortion
further down the line until the distortion reaches
point B?

EXAMPLE: A pebble in a pond will give the appearance that a
wave is moving when in actual fact each wave is an
up and down movement and not travelling.

Not being a scholar of any type, I submit that RF actually
creates a distortion in space itself (time, same thing). This
distortion travels until it reaches point B.

Sounds a little heavy doesn't it. Perhaps to SciFi? Let me
know.

Bye for now,,,

This is incorrect. Sub-section 45(3) of the General Radio Regulations, Part II states that if the visiting amateur holds a certificate or licence which indicates that the holder of that document has passed a Morse code test of at least 5 wpm Morse, the individual may use any frequency below 30 MHz, but is limited to Morse code emissions.

> 1. Does a radio wave really travel from point A to point B
> at the (or near) speed of light (universal constant)?

Yes. Or, at least the *energy* in the radio wave travels. There's
no physical mass that gets "pushed" to its destination or anything.
(Though radio and light waves *do* carry momentum.)

> Or does the emission of R.F. from an antenna create a
> distortion in a medium which induces a distortion
> further down the line until the distortion reaches
> point B?

Yes. Well, "the medium" is bit vague, but not too far off from
the truth of electric and magnetic fields. If you want to think
of a medium carrying radio waves, call it the "ether". Lots
have people have done so in the past :-)

> EXAMPLE: A pebble in a pond will give the appearance that a
> wave is moving when in actual fact each wave is an
> up and down movement and not travelling.

Radio waves work the same way. Remember, waves can transmit energy
without actually causing a net flow of matter.
For example, if I have my radio playing
on the other side of the room, it takes energy to run the speakers.
The speaker isn't creating air that it's shooting out; it's simply
moving the existing air back and forth, which takes energy.
And a small fraction of that energy makes it to my ears as sound.

> Not being a scholar of any type, I submit that RF actually
>creates a distortion in space itself (time, same thing). This
>distortion travels until it reaches point B.

That more appropriately describes gravitational waves (not to be
confused with gravity waves!) If RF distorted "space", all masses
would be sensitive and respond to RF waves. But this isn't the case;
you need a conductor (such as metal) for RF waves to be detected.
The "distortion" caused by radio
waves is in the electric and magnetic fields, not in actual matter.

True, but attitude is everything! Most of the "old timers" ARE
anachronisms. Just look at the ARRL, and any issue of QST. It's
straight out of the 1930's. Believe me, nostalgia ain't what it used
to be. I've held a licence since 1963, but do not consider myself an
"old timer"I am primarily a listener, because I don't have anything
worthwhile to say.

>>How many photons are there in a CW dot?

Well,

let's see: To receive a dot, may be 1 uV is needed for 30 msec.
This makes it 6e-12 Joule. At 14 MHz a photon conveys only 9e-27
Joule, making it roughly 10^15 photons needed for a dot.

This shows that referring to short waves as photons is not particularly
meaningfull. (about as meaningfull as referring to cosmic rays as waves).

I didn't know that ONLY the europeans had a bad image. A few months ago JY1 was on 20 meter and what was heard there was a disgrace for EVERY ham (EU or not) :-(

>2. Do you believe that all Europeans do have this bad image or a few from
> a limited region in Europe only?

It seems certain areas behave worse than others

>3. You know, Europe is a continent with many more or less very different
> countries and each country has an independent national radioclub. Are
> you able to characterize the HAM's from different European countries,
> especially their behavior in a pile up?

Sure can.... there are areas where hams tend to shout into their microfones instead of talking.

>4. What do you believe are the reasons for this bad image?

It's seen everywhere in the community and since hams reflect community...

>5. What can and should you do to change this bad image? (you: as an European
> or as a none European)?

Difficult one.... one ham can't make a difference in a pile up but then again... if everybody would see it this way.... :-)

>6. What can and should the European national radioclubs do to change this
> bad image?

Maybe closer monitoring of the hambands and action when it gets too heavy. Better guidence by 'elmers' or national societies so that not only the technical side of the hobby is thaught but also 'operating practice' and 'good manners'.

As a sidebar: it seems that the worst offenders in a pileup are the ones with the strongest signal. Maybe these guys can't stand it if they have to call twice before they make the contact (not the QSO, because that means TALKING to the other guy :-))

Just my 2 cents, Your mileage may vary
Opinions are my own (most of the time).

Anderman is incorrect. There is no concept within the Canadian regulations of commonality of frequencies that a visiting amateur may use. Such a concept would mean that Canadian authorities would be in the untenable position of enforcing regulations for which those in Canada would not have had the opportunity on which to comment.

I might advise Anderman to obtain a copy of RIC 25 from Industry Canada and note that in subsection 45(3) of the General Radio Regulations, Part II, a person holding a Technician Plus licence issued by the FCC is permitted to operate only OOK emissions on the 160 metre bands.

We are elitists, so what, Is that a problem? Are we in the name of
Democracy going to succomb to the Dictature of Mediocrity?

BTW, when you listen to the CW contests where people transmit their
age like the All Asia this week end, you do hear a lot of 30s and 40s
and even 20s. Is that the old guard ? Sure the no-coders can't know that
since mane of them don't even read CW. Is there a sickness called
CW-syndrome?

Would he call CQ and start a QSO when someone else (a legal station) is already using the frequency? If you are intentionally "calling" over someone else with the intent of driving them away, it is malicious. Even if you have "good" intentions (like "protecting" the bands from bootleggers).

[snip]

>>> >QSO over them? Isn't the policy on most machines that of ignoring the

>>Yep...ignore him.

>In other words continue your QSO over him, right? Why isn't that "malicious
>interference" yet when my buddy on 10m does that you change your opinion?

No one said you talk over the jamming station. Just ignore them. On a repeater the jammer may very well be talking over you. If they keep it up, we shut down the repeater for a while and move to alternate machine. But like I said before, our SOP (they are very open rptrs so some users may not be aware) is not to start jamming battles with bootlegger or licensed idiots that are causing trouble.

[snip]

>>SOP around here (on the
>>machines I have a control op interest in) is to ignore the jamming
>>station if possible. If this is not possible, the repeater gets shut
>>down for while and we QSY to another (the other). But we do not start
>>"jamming wars". It's quite effective...we have very little trouble with
>>jammers on our repeaters.

>My friend on 10M is not jamming - just sending CQs

Again. Your buddy wouldn't *intentionally* send CQs over communications between between legal stations because it's a violation of 97.101 ...and

pretty darn rude. He wouldn't do that...would he? You said that he follows them around. That sounds pretty intentional me.

>>Fine idea. I support tracking down jammers. But I wonder what most
>>people do when they find the responsible party.

>And how does one track illegals on 10M? Airfare is too expensive to
>fly to the Philippines and other South Pacific areas (which is where
>we suspect these transmission are originating from).

I guess you don't. You mixed the repeater issue in with this. In the case of VHF/UHF repeater trouble, tracking down the source is an easier task.

Jeff... I can understand your frustration - I don't spend much time working amateur HF so I seldom see *these* scenerios. However have been involved enough in other radio services to know that interference is a pain in the ass...and if it's coming from an illegal station that just compounds your anger with the situation and the guilty operator.

But...jamming bootleggers is NOT a solution to the problem. And with "international bootleggers" on HF this is even more true. You will not rid the amateur bands of bootleggers this way... because they don't care and there is too much room available to them - allowing them to work around jus about anthing you try on your own.

I am sorry that I don't have the right answer for you. But I am pretty sure I recognize some of the wrong ones.

>sure. Thanks, 73 N1AEP

Officially, its 50.4 Mhz. I used to have an old Clegg 99'er and a 66'er
with one rock (crystal) for that frequency. While I never got any DX
we did get some locals together on 6 meter AM a couple of times.
I wish I still had one of the Clegg's. The last one I put on the swap
table and it got snapped up faster than I expected.
I hope to see you on 6 AM when conditions get good in a couple of years.
I had great fun on 10 meter AM at 29.0-29.1 Mhz during the last sunspot
peak years. Fortunately my new Icom 706 will transmit 6 AM but I need
to find another old tube rig to do it right. At least I kept the Rock.
I still have the Heath DX-100 for 10 meter AM anyway.

That isn't exactly what you meant to say I know. The CW envelope isn't exactly a rectangular pulse, so simply multiplying its duration by power doesn't give exactly the correct answer. You really need to take the integral of the area under the pulse. If the CW envelope were a true rectangular pulse, then we'd have sidebands out to infinity, and that would complicate the calculation too. Since it does have finite rise and fall, however, the sidebands are limited in extent to 1/risetime. For moderate speeds, that's close enough to the carrier frequency (in percent) to ignore. But if we want to be very precise, we can do a Bessel function on the sideband energies and use that as a correction factor.

>>In layman's terms, the answer is simply "lots" because Planck's
>>Constant is a very tiny number indeed.
>
>Which is why we don't have to worry about the particulate view of light
>when we talk about wave propagation here.

In most cases, that's true. There are cases, such as when we want to figure radiation pressure, or when we're dealing with very weak signals which may only arrive one photon at a time, where we have to take the quanta into account.

>closed and not open as some propone.

Many philosophers would like for the universe to be closed. It makes a more elegant system that way. But unfortunately the theorists haven't found enough matter yet to close it. The best data available from the Hubble telescope seems to indicate that the universe is very close to the balance point between open and closed. It'll take even finer measurements to determine which way the balance tips.

I was fond of Fred Hoyle's Continous Creation model myself, but the positive detection of the 3 K microwave background radiation put an end to that. There was a Big Bang. Whether the universe is open, and will die with a whimper in the heat death, or whether the universe is closed and will come crashing back someday to form a new Cosmic Egg which will in turn rebound in yet another Big Bang, is the only question left to answer. Philosophically, I like the latter possibility, but we'll have to wait to see what the universe has to say about it.

Nope, GMRS is licensed for family use only, although there are a few groups out there that are grandfathered under the old rules. The community watch would be eligible for business band, though, or maybe talk to a local radio dealer who can arrange for free/cheap repeater time. I'm curious though, most of our local programs here in Ohio work fine with cell phones, with Ameritech donating quite a few phones. Supposedly, the only other person you would need to contact is the police, or another homeowner, why doesn't that work?

> Or does the emission of R.F. from an antenna create a
> distortion in a medium which induces a distortion
> further down the line until the distortion reaches
> point B?

That's (roughly) what 19th century physicists thought. They called the medium the "ether". Then two gentlemen by the names of Michaelson and Morley came along and performed an experiment to test the idea. The rest is Maxwell's Equations, Einstein's Special Relativity, quantum mechanics, and modern physics.

Maxwell showed *how* EM waves can propagate without a supporting medium, and *why* C is the value that it is, Einstein showed why that value must be a universal speed limit, equantum mechanics gave a discrete answer to the sizes of the energy bundles which are allowed do so (averting the electromagnetic catastrophies, IE if C weren't a universal limit, and EM radiation weren't limited to discrete photons, the night sky would be blazingly white, and electrons would spiral into the nucleus), and modern physics is the result.

Hi Gary, looks like Maxwell was wrong since EM waves probably cannot propagate outside of the universe where there is absolutely no supporting medium. Empty space seems not to be empty after all.

Hmm, KA1VBQ's distaste for amateur radio has been stated many
times by her father. Perhaps she felt no one would talk with her
courtesy of guilt by association with K1OIK.
I have no idea as to why N1XIY refused the equipment, his
license is less than a month old. I am reasonably certain however that
K1OIK had no part in assisting Abram obtain his license. Perhaps he
did not like the assumed motives of the gift-giver.
K1OIK has been trying to sell his gear for a while now but
apparently no one wants to deal with him. That doesn't suprise me
considering the tact and reasonability he has displayed in the venues
where he has attempted to promote a sale.
There are numerous charitable agencies that will accept the
donation of the equipment and provide a tax deduction for K1OIK. An
added plus for K1OIK would be he would not have to deal with any of
the hams that he finds so distasteful.

HAMFEST/COMPUTERFEST CALENDAR 1996 - NORTHERN ILLINOIS
last updated June 1, 1996 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (708)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale and ARRL for providing some of the information.

JUNE

June 2 (Sun), Princeton, IL - Starved Rock RC. Bureau County Fairgrounds. Admission $5, free parking. Info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341-1710, tel. 815-795-2201 Usually an excellent hamfest, with sellers from Illinois, Iowa, and Wisconsin.

June 9 (Sun), Granite City, IL - Egyptianfest '96, Egyptian Radio Club. Granite City campus of Belleville Area College, 1/2 mile south of I-270 on Ill Hy 203 at Maryville Road. 8:00am to 1:00pm CDT. Annual hamfest, computer fair and fleamarket. VE session, food and drink, indoor dealer / exhibitor area. Talk-in 146.79 MHz. Info: Egyptian Radio Club, P.O. box 562, Granite City, IL 62040, call Bill Dusenbery N9OQK at (618) 398-1456.

June 30 (Sun), Wheaton, IL - Six Meter Club of Chicago. DuPage County Fairgrounds. Outdoor and indoor flea markets. Gates open 7 AM. Buildings open 8 AM. Admission $5 at gate. Talk-in on 146.97 MHz (107.2 PL) or 146.52 MHz. No booze allowed. Tickets available from Mike Corbett, K9ENZ, 606 So. Fenton Ave, Romeoville IL 60446. 24 hour hotline for info (708) 442-4961. Good hamfest which moved from Santa Fe Speedway to Wheaton this year. *

Jun 30 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

JULY

Jul 13 (Sat), Oak Creek, WI - S. Milwaukee ARC Swapfest. American Legion Post 434, Shepard Ave. Admission $5. Talk-in 146.52 MHz. Info (414)762-3235.

Jul 14 (Sun), Sugar Grove, IL - Fox River Radio League. Waubonsee Community College, Rt. 47 at Harter Rd. VEC test-

ing. Admission $5 at gate, free parking. Info: Diana WD9API, (708)293-7485. Fair, small to mid-sized hamfest.

Jul 27 (Sat), Pecatonic, IL - Rockford ARA Hamfest. Winnebago County Fairgrounds. VEC testing at 1st Baptist Church, 7th & Washington. Admission $5. Kids 10 and under free. Info, Marsha Plasters (815)399-9233 or Diana White (815)645-8545.

Jul 28 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

AUGUST

August 10 (Saturday) - Western Illinois ARC Swapfest, | Quincy, IL. Eagles Alps Grounds 3737 North 5 th Street. | 4.5 miles north of downtown Quincy with easy access from US | Highway 24. 8:00 a.m. to 2:00 p.m. Admission is $3.00 at | the gate, $2.50 in advance, per person. ARRL VEC testing, | all classes, is at 12:30 p.m. Reservations go to NA9Q at | (217)224-8526. Indoor flea market is $5.00 per 5-ft table. | Outdoor tailgating space is free. Talk-in is on 147.03. | Lunch will be served on the grounds.

August 18 (Sun) - DuPage ARC, Stickney, IL. DuPage ARC Hamfest Computer Show. Hawthorne Race Course, 3500 S. Cicero Ave. Air conditioned exhibit hall for dealers. Outdoor fleamarket spaces free. 8AM - 2PM. 6 AM setup. Admission $5. Kids under 12 free. Talk in 145.25 MHz. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517. tel: 708-985-9256.

August 25 (Sun), Woodstock, IL - Tri-County Radio Group. McHenry County Fairgrounds, Rt. 47. Admission $5 at gate, free parking. Kids under 12 free. Info (voice/fax) (708)658-1678.

August 25 (Sun) - Vermilion County ARA, Danville, IL. Info: Gary Denison, KA9SKS, 14704 East 2750 North Rd., Danville, IL 61834-5610. tel: 217-759-7389.

August 28 - 30 - Antique Radio Club of Illinois, Elgin, IL. RadioFest96. Holiday Inn Holidome and Convention Center, 345 River Road, Elgin, IL 60123 Ph. (708)695-5000, (847)695-5000 After 01/20/96. Info: Jeff Aulik, 1708 Parkview Ave., Rockford, IL 61107 or Carolyn Knipfel, RR 3, 200 Langhorn, Morton, IL 61550.

SEPTEMBER

September 8 (Sun) - Bolingbrook ARS, Joliet, IL. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517, tel: 708-759-7005

September 13-15 (Fri, Sat, Sun) - Peoria, IL. ARRL National Convention. Info: Ron Morgan, KB9NW, PO Box 3508, Peoria, IL 61612-3508, tel: 309-694-2649

Sep 21 & 22 (Sat & Sun), Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. Starts 6 AM. Buildings open 8 AM. VEC testing. Info, (708)457-0966. Usually one of the best hamfests in NE IL.

Sep 29 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

NOTES - Computer Central shows

Computer Central computer shows are held at the College of DuPAGE, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

3697. Re: CB bootleggers on 10 meters

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-17 00:00:00 UTC
From: jherman@Hawaii.Edu
Message-ID: <Dt5sDL.7Fn@news.hawaii.edu>
Source record: 222935

Good morning Jim,

At 0530 HST I called the Washington FCC office. Here's how the conversation went:

Me: I have a legal question regarding out-of-band CBers operating in the 10M ARS band.

FCC: Sure - go ahead.

Me: If an amateur attempts to start, or maintain, a conversation with another amateur on the same frequency over the top of a couple out-of-band operators, could that be construed as malicious interference?

FCC: I'd say no.

Me: Okay, now what if those illegal operators shift to another frequency on 10M, and the amateur also shifts with them in an attempt to start, or continue, a conversation with another amateur - would you consider that malicious interference?

FCC: You'd have to ask ``Interfering with whom?'' You're not interfering with an authorized transmission on that band so you are not causing interference. You would always have to ask ``Interfering with what or whom?'' to complete the picture. Thus, I would say you are not causing interference.

The conversation continued with me thanking him for their proposal to stop the sale of easy-to-modify out-of-band amateur equipment.

If you'd like to verify the above, you can call 800-322-1117 (FCC Consumer Assistance) and when you finally get to talk to a living person, tell them you have a legal question regarding interference within the Amateur Radio Service. They well transfer your call (make sure you have something to pass the time with - I was able to grade a stack of papers while waiting); someone with knowledge of the ARS will eventually come on the line.

73 from Hawaii,
Jeff KH2PZ / KH6

How many hams use 2300-2310 MHz vs those who use the entire 2m and
70cm bands? Except for the handful of people, nobody would notice if
10 MHz of the 2.3 GHz band were missing.

I am currently learning CW in order to get onto the HF bands. My major interest is in homebrew. CW has three wonderful advantages:

- It is much easier to design and build a CW transmitter (receiver design is not eased as greatly).

- If the bandpass is narrowed to 300Hz or so, the SN ratio is such that low power can go a long way.

- With sufficiently selective receivers (and suitably de-keyclicked transmitters), quite a number of CW channels can be fit into one voice channel.

Now, if all you're interested in is buying your equipment, then CW must be nothing but a burden. But if you're into designing and building stuff (which are the roots of Ham), CW is a great entry point.

Besides, learning CW is very easy (I am doing it now). It seems some people spend more time whining about having to do it than it takes to actually do it!

How many people who complain about doing CW design and build their own equipment? I can't imagine it'd be too many, given the demonstrated lack of patience wrt to learning CW. Stop watching the idiot box (TV), that'll free up lots of time!!! :-)

Does CW really discourage the technically interested/inclined?

Cheers,

Chris (looking forward to getting on the air).

> ...<SNIP>

...and these same people cannot spend half an hour a day for a month to learn 5 WPM morse code? How much TV do they watch each week? How much time do they spend just "chewing the rag" each week? Surely it's not really too much to ask.

I'll bet "try it, you'll like it" would work with many, if only they give it a chance.

Cheers,

Chris

PS: I'm currently learning CW, it is not hard, try it (it's actually quite fun).

3706. Processor Concepts Software --> Icom Repeater

Nobody ever said it wasn't. We're discussing the CW *TESTING*
requirement.

>Besides, learning CW is very easy (I am doing it now).

Walk a mile in the shoes of the guy with a EE degree and a commercial
radio license who tried for 30 years to get his CW speed up to 13wpm
and failed.

>How many people who complain about doing CW design and build their own
>equipment?

The guy mentioned above did.

>Does CW really discourage the technically interested/inclined?

I work with hundreds of EEs. A lot of them are no-code techs. A lot
of them would gladly take all the written exams through extra if they
could get HF privileges without the Morse code requirement.

3709. Hopeless to run HF voice at 100 watts?

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-17 00:00:00 UTC
From: charles1@netcom.com
Message-ID: <charles1Dt4En2.3zu@netcom.com>
Source record: 222947
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc

I recently got my general, and have trying my luck on HF voice
using a TS820 running 100 watts, antenna tuner, and a 64 foot folded
dipole at 7' in my first floor apartment (also a Carolina Bug Catcher
sitting on mag mount on floor with two 30' folded counter poise wires).

My luck has been rotten, (with exception of 10 meters). I've talked
to three HAMS on 20 meters only to have to struggle just to get
them to recognize my callsign.

This brings up my question: Is it hopeless to run HF voice at 100 watts?

If I were to get a inverted V dipole up at 40' would I have the same
lousy luck? What cheap portable antenna would be most efficient?

I know two other HAMS who have recently gotten their general,
and both report lousy results on 20m-160m running 100watts.
Both live on third floor apartments using folded dipoles. Both rarely
are able to snag a QSO.

What about running mobile? A 6' whip should pale to a 60' dipole on 3d floor?
Seems 100 watts and a whip would be worse than hopeless.

Is 100 watts sufficient when the sunspot cycle picks up?

Are 20m-160m bands strictly the domain of the "big guns"
running 1500 watts, 100 foot towers, and monster beams?

If this is so, what is the minimum setup to operate effectively?

400 watts, 600 watts, 1000 watts?

30', 40', 60', 100', tower?

antennas?

Hi Wolfgang,

The names of German political parties do not concern me.
I must admit, however, I have not seen the word "socialist"
in the name of a party that did not practice it.

>Do you really think - that the US constitution . or something
>in your mind is the only garant for a stable democracy ?

No. The U.S. Constitution was flawed in its creation and its
inadequate protections have since been further weakened. As
for something in my mind, intellect is the only means by
which man achieves morality.

>Wonna heal the world by dictationship of rulez ?

Yes, rules which I call "moral law".

>Poor US people ....
>Maybe you still haven`t discovered that there are some kinds of
>Law-systems in the world ???
>And I think - that the national oriented parties in germany are -
>compared to the US republics - really harmless and social
>oriented parties ...

No socialist philosophy is harmless.

>You cannot compare the situation in the States (without having
>any idea of foreign history -) with other countrys.

Perhaps you're right. All I can do is to help others
understand why socialism is tyranny. That's a universal
truth.

>And the education - your government and TV applys to you - may
>not equal the present situation in any country.....

I agree. Socialism is practiced in many different ways.

>Socialists :
>
>This party is the reason why we have a good social system
>in our countrys - which cannot compared in any case with
>that one in the US .....

Social order was also strictly maintained in the Soviet Union,
but not by moral means.

>sitting on mag mount on floor with two 30' folded counter poise wires).

It sounds like about right. You do not get much signal out into the
ether with these sorts of antennas indoor at low heights. You can
expect no more.

>This brings up my question: Is it hopeless to run HF voice at 100 watts?

Gee, just saying "HF" is silly in this context. It is hopeless to run
2 KW into a dummy load. It is very easy to run HF with 3 watts to a
good efficient dipole up 50 feet in the clear. Your antenna is the
single most important piece of equipment you have, you need a better
one!

>If I were to get a inverted V dipole up at 40' would I have the same
>lousy luck?

No. That is an easy question. That sort of antenna with 100 watts would
be really "easy" by many standards, too easy for many who like to run
very low power with simple antennas.

>What cheap portable antenna would be most efficient?

No such thing as a free lunch. You need to know this in your bones. It
is absolutely true and most important to know. No small antenna will
do anywhere near as well as a full sized one. No low antenna will do
nearly as well as one at a half wave above ground. Etc, etc.

>Both live on third floor apartments using folded dipoles. Both rarely
>are able to snag a QSO.

Same comments. They need an antenna. That is all.

>Seems 100 watts and a whip would be worse than hopeless.

Not always, but it is always less efficient than a full sized antenna.

>Is 100 watts sufficient when the sunspot cycle picks up?

It is sufficient anytime with a real antenna, etc etc.

>Are 20m-160m bands strictly the domain of the "big guns"
>running 1500 watts, 100 foot towers, and monster beams?

It is hard to tell if you are trying to flame bait here. Of course the answer is no. I can tell you about guys running 10 watts maximum PEP who are on the DXCC honor roll. I personally did WAS SSB on 40 meters with 5 watts PEP in about 2 months two years ago. I had a real antenna. A full sized dipole at 40 feet.

Good luck, if you really want the answers, they are out there.
Try a nearly invisible long wire with thin, thin wire into the trees outside as high as you can get it. Get / build an antenna tuner and you will have all bands with 100 feet of wire out there.

Hang in there, and pay some attention to what the other respondents suggest about improving your antenna system. 100 watts is plenty.

But here's something else to consider: It's a lot more important HOW you operate, and WHEN you operate, than what you're operating. You'll find that your results improve dramatically when you target your bands at the best time of the day for each band, relative both to your QTH and that of your target QSO.

You should be able to have some fun on Field Day....

Hi Gary, That definition is not universally :-) accepted.
Remember the infinite number of universes looking like bubbles on
the cover of "Astronmy"? Some merging, most not. Our universe is
just one rather small ant farm. If one has enough energy, one can
create one's own universe out of nothing. In trying to rip a
single particle apart to form two monopoles, scientists succeeded
in creating another identical particle just like the one they
started with each maintaining its very own north and south pole.
Looks to me like space (as we know it) is a characteristic of
matter, not visa versa.

Where *is* outside the universe - and Who's on first.

This is a statistical aberration. The FCC generally only polices the
HF bands. Subsequently, any "convicted" jammer the FCC fines will more
than likely be a General class or above than a Codeless tech.

If the FCC policed both V/UHF and HF proportionally according to the
number of licensed hams in those bands, then you might be able to
draw a conclusion about the population of hams as a whole. As it is
now, you can't.

>Do I like the "I learned it, so you should too" attitude? No, it's

> (and even those little toy radiometers you see at the hamfests).

PSE discard earlier posting. Got my Power wires crossed.

Gary,

Its not photon pressure that makes those "Sails" and
Radiometers works its the gas pressure. Solar Wind in one
case, low pressure gaz in the radiometer in the other case.
One side is darkened to absorb more energy and heat the low
pressure gas. The differential pressure (brownian) makes the rest.

A little known fact about photons. From their point of view, the
whole universe does not exist. Since they travel at the speed of
light, if we apply the Lorentz contraction, the Photon does not
"see" distances. From Sun to Jupiter, From Sun to next gallaxy is
always ZERO distance...

About the (somewhat silly) question about the number of photons/CW dot
it could be calculated. Determine how much Energy is in the Dot (P*t)
and divide by the photon energy E = h*f

Where h = 6.6257 x 10-34 J sec. Planck Constant
F frequency

Example: 100 Watts, my CW dot is 100 ms, F is 14.000 Mhz

Nbr of photons = 100*.1/(6.6257*10^-34*14*10^6) = 1.078 * 10^27 photons

Fast CW -> less photons, Lower frequency -> more photons.
From this example we see that the Low banders in CW are really producing
a lot more photons than VHF guys on their handhelds.

I like your "Destructive" motto Gary, and always your
constructive answers HiHi.

Well this is quite an arrogant statement! In this context, MD is attempting to gain the upper hand by belittling Kirk's points. The fact that MD deleted Kirk's statements is an attempt to do so by omission. Notice that MD did not include the ususal <snip for brevity> that is common on USENET. This is usually stated when the responder is not rebutting the snipped staements, but here hs is and takes a cheap tactic instead. Since the statements are not included for the reader to see for himself, the reader is deprived of making an intelligent observation himself and thus must rely one MD's OPINION that is inherent in his statement. This OPINION is played out by using the word "Excuses" which in contemporary American English connotes that it has no value. A common phrase is; "Don't give me any excuses, just do it" which is interpreted as "Don't give me any (lame, unfounded, unreasonable, unworthy) reasons, just do it. The point is that Kirk gave reasons that are valid to him why he is not learning and using CW. To turn it back on MD; If you don't like Kirk's reasons, that's just too damn bad. More than one can play your lame game MD!

This of course is designed not to counter the point made by Kirk but instead to change the topic. The salient point is not in the numbers or the "theory" of the band/user porportionality. The fact still remains is that CW testing has not, is not, and will not in the future be a filter that keeps the riff-raff off the air. Since there are in fact amateurs with license grades that require passing a CW test that are in violation of the law and common decency on teh bands it is proof that CW testing does not filter out these cretins. And that

is the only point that matters since the pro-code testing group purports CW testing as a lid filter and in fact it is not as proven by any significant numbers of these hams being cited.

|>
|>
|> >Do I like the "I learned it, so you should too" attitude? No, it's

Once again MD picks and chooses statrements and removes the rest so that the context and other points are dismissed by omission. REALLY cheap and disingenuous. Do I smell desperation?

|>
|> So is SSB (you were aware that SSB is only a few years younger than
|> CW, right?) Seems to me all these complaints just to get access to an
|> archiac mode is energy best spent on other, more productive, activities.

Well gee, one person's few years is a lifetime or more to another. Just going from recollection, Morse Code was invented by S.F.B. Morse sometime in the mid to late 1800s. SSB transmission was invented, when, in the 1950s. Seems like that is more than just a few years to me. So the answer is WRONG! And of course MD must get in another one of his slanted cheap shots with the next sentence. It is unfounded and has no value since the assuption it hinges one is not substantiated.

|>
|>
|> >Do I favor a reduction in the CW requirement for HF? Yes. ...
|> > This doesn't seem fair.
|>
|> Amateur Radio is supposed to be "fair"? Dang! I missed that question
|> on my exams!

Well not it doesn't. And that is why I'm going to do some research and find out just what MD is not capable of learning without a significant amount of effort and I'm going to push as hard as I can to make that a pass/fail requirement. I'm thinking of stuff like Superstring/Grand Unified Field or others known collectively as Theories of Everything. But if MD is a high energy physicist then I'll find something else. It really does not matter that it has no relevance whatsoever to what MD wants to do in amateur radio, since he obviously thinks it is alright for that to be done by his continued support for CW testing.

|>
|> MD

Clarks comments are valid here and sum it up. Let me add (and bear with me I'm checking into the thread late and it may have been said) the difference between 100 watts and 1000 is 10db. On 75 and 40 where signals typically run 20-40db over s-9 with a good antenna, you would still be 10-30db over s-9. Hardly a waste of time...

If code requirement is dropped for HF access, then all Hams will be no code and have access to the HF bands (unless you imply new exclusion tests other than code). I fail to see why this is so "transparently fallacious".

>
> Accepting for the moment that CW is spectrally efficient (it isn't),
> won't the severe crowding give these newcomers a great incentive to go
> to CW? And could you tell us why they won't use (say) RTTY, ever?

It is not your raw data thoughput that is at issue, it is the size of bandwidth occupied by each user. Perhaps they might use RTTY. But many will use voice, each taking up 3KHz of space (regardless of spectral efficiency). Morse users take up ~300Hz. That's many more users per band. It's not the speed of data throughput that's important, it's the number of people working on the band. Unless you insist on groups of people using concentrators, why is data throughput important?

> How is it that you can with 100% certainty predict the actions of

> superior knowledge. Nice attitude.

It boils down to nothing of the sort. Where did I say people cannot learn? In fact, I imply the opposite - surely anyone can learn Morse! Where do I claim superior knowledge? With the attitude you display in this post, I dare say you probably do more dictating than I.

> ...<SNIP>
>
> I've worked lots'n'lots of non-english-speaking hams on phone, and
> damn few of them knew conversational english. DX phone procedure is
> just as formal and removed from `conversational style' as is CW. (And
> morse isn't a language any more than the Times-Roman or Helvetica
> fonts are languages.)
>

So, after mockingly accusing me of having superior knowledge, you go on to imply, from your contact experience, all current CW and future Hams will be able to speak enough English to handle at least voice DX. If not, tough? Nice attitude, as you say. Oh, and exactly right about Morse - it isn't a language, it's much, much easier. I'm sure anyone can learn it (there I go again, thinking others cannot learn).

Obviously I have touched a raw nerve here. Please back off with your unpleasant attitude. I was giving my opinion about why I think the code requirement is good. If you don't like it, that's your right, but please be a little more civilised in your objection.

Chris.

This is indeed true! I have been running a barefoot rig to a dipole up about 30 feet for 20 meters for a few years now.

Just within the past week I've worked KH2/VP9BP, KA3HMS/KH3 and VK9NS on 20 SSB. Try around local sunrise and for a few hours after local sunset for good conditions on 20 now, especially over the pole. On CW, I've worked a plethora of EU, Pacific and Asia at around 0400-0500Z (11-12 pm local time.)

30 meters has also been very nice lately.

Good luck!

When I show ham radio to kids I am positive about it.
I let them come to their own conclusions.
They like me fine if I do not push ham radio.

>their own account) ever been convicted of this `fraud'? I find it
>hard to believe that a jury would go along with this bizarre legal
>theory, but maybe I'm just kidding myself.

Well I don't know of any account holders that have been convicted of such a violation. However many people that offer the cloning "service" (Hey! For $199.00 I'll set you up with a second phone on Your existing number!) have been shut down and generally face civil action if the carriers choose to pursue it.

But it is not victimless fraud. Just like copyright infringment of writings or music, etc. There is a victim even if the "criminal" is not trying to profit from the infringment. You are denying the carrier money they are entitled to recieve for you using their service.

Now I am going to say something, and I am going to make it loud and clear... YOUR CELLULAR TELEPHONE SERVICE IS NOT THE SAME AS YOUR REGULAR TELEPHONE SERVICE IN YOUR HOME OR OFFICE! You are NOT paying to have dialtone delivered to a demarcation point from which you can add as many phones as you wish. Cellular is a radiotelephone service, and like most commercial radio services, you pay for each radio that uses the system or pay a rate based on a agreed number of mobile units.

Now I expect to have a dozen or more people here tell me how, that if they are paying for the airtime they should be able to use as many phones as they want. But sorry...it just ain't so. If you clone an ESN you void the type accpetance on your phone and you defraud the cellular carrier of payment that they are legally entitled to.

That's just the way it is. You may not like it. But it's just the way it is.

> Does this apply to Canada/US only or Any Country/US?

It depends on the treaty. The UK/US treaty allows a holder of a US
General, Advanced or Extra Class License to enjoy the same privileges
as the holder of a UK Class A License, and so for instance may use
the 70MHz 4m band, which is not part of the US frequency schedule.
Indeed the license also allows use phone on 30m just like on every
other licensed frequency in every amateur band, even though the IARU
band plans frown on this practice.

>Ted F.
>N3SQY

I don't think that will work anymore. GMRS licensees are only supposed
to communicate with family (in the same household to be nit picky).
There are commercial users on GMRS however no new commercial or
non-family entities can get a GMRS license.

I would look into the new Family Radio Service. I know that sounds wierd
as opposed to GMRS, but the announcements I have seen have stated that it
can be used for families AND organizations, groups, etc. It is a short
range service (no repeaters and low power) but may work for a
neighborhood watch group. The descriptions I have seen for FRS indicate
it nothing more than a UHF CB service available to pretty much anyone -
and no license is required. However you must use equipment that is
approved for the new service.

If your group cooperates with local government (which I am sure they do),
you might create an official organizational link to say the police
department. Then your city may be inclined to allow you to operate under
their license on one of their public service channels. That would be
perfectly legal. Many public service channels are used very little at
night in many small to medium sized cities and might be suitable. Radios
that will work on conventional VHF or UHF channels can usually be found
at reasonable prices on the used market.

Heck, there are even good prices on new ones if you are not partial to the big names like Motorola or GE. We have a some radios users in our company that use 16 channel "Standard" hand helds for UHF. At about $400 each (new) they are "disposable" compared to Motorola HTs that start at $700. But the warranties and life expectancy of the cheaper radios sometime has a bit to be desired.

Good Luck.

Since the ARRL doesn't provide me with a free copy of their band plan, how would I know what the "simplex" freq's are supposed to be? Gee Bob, it's a good think you started your original post off with that disclaimer, some packet folks might have really (and, apparently, inappropriately) jumped down your back for suggesting you use 145.10 as a simplex freq. I suppose if they really took a second and looked at what you wrote they might not feel like they should appologize to you outright. 73 and good traveling.

An important point that neither this post nor any of the follow-ups I've found have made is whether your neighborhood watch group is a paid organization or resident volunteers. If the latter, why not get ham radio licenses and portable ham radios for your group? If you're not getting paid to do this, how does it differ from volunteer communications at any other community event, such as a walk-a-thon or parade? You could use the HTs to communicate amongst yourselves, and the (existing) cell phones to call the police.

>So tell me why are callsigns so important to some people here?

Callsigns aren't important. I was implying Jeff was nobody we know,
not a regular user of the newsgroup, which led to the second part
of the paragraph, with which you agree. I explained why I care
previously about what Jeff is writing about. I, and a bunch of other
people, enter into a discussion about CW and are emailed by a net
cop that we are discussing it in the wrong AMATEUR group. So
if we have to discuss CW in the correct AMATEUR newsgroup, then
I think Jeff should discuss telephone fraud in the right newsgroup
also, which I pointed out in my first reply to his message. In turn
someone pointed out that Jeff's question was 'interesting', and in
turn I pointed out it wasn't interesting, and that's where we are now.
Anyway, callsigns aren't important. But usually most hams, when
dealing with other hams, have a tendency to display them.

>> In my mind, Jeff is a) somebody who is trying to beat the phone

Next time you need a legal question answered, Jeff, spend a hundred
bucks and ask a lawyer. That way you won't ruin anybodys day,
especially yours if you get busted for doing something that some yoyo
told you was 'interesting'.

Nice try, but History proves you otherwise.

Over the past decade we've seen more attacks on our VHF+ spectrum,
and no attacks on our HF spectrum. Since the Codeless license already
gives access to the VHF+ spectrum, clearly a Codeless license does
nothing to prevent our radio spectrum from coming under attack.

Next.

>Jeff, you're letting your emotions run your thinking on this issue,

Hi Jim, That's the second time you've said that. I have no emotional
feelings one way or the other in this matter. I've said that a 3rd
party does this and that I felt it was no different than what's done
on many vhf/uhf rptrs when there is an illegal op - activity on the
rptr continues. You, Curtis, and Bill challanged that opinion so I
sought the FCC's opinion.

>and you are only believing what YOU want to believe. I'm not being
>closed minded nor am I reading between the lines. I am going by the
>rules say. It's printed in black and white....

>no one else was around the nearby coffee machine? I'm not being
>sarcastic I really want to know...again there is a credibility issue

>here.

I told the first person who answered the telephone that I had a legal question regarding interference within the ARS; I ask her if I could speak to someone knowledgable of the ARS. She forwarded my call. The gentleman I was connected to didn't provide his name and I didn't ask.

>>Me: Okay, now what if those illegal operators shift to another frequency

>>with an authorized transmission on that band so you are not causing
>>interference. You would always have to ask ``Interfering with what or
>>whom?'' to complete the picture. Thus, I would say you are not causing
>>interference.

>Again, 97.101(d) does not differentiate between authorized and
>unauthorized transmissions. It clearly states "to any
>radiocommunication signal."

Remember the days of the Russian Woodpecker on HF? Did you transmit over the top of it? Did you violate $97.101(d)?

While in the Coast Guard, we would sometimes have to bring one of our transmitters up on 20M to work a boat in distress. Believe it or not, we would ocassionally encounter someone jamming the communcations, yet we'd attempt to work over the interference; sometimes we couldn't but an amateur station would would act as a relay. Was that relaying amateur and the distressed vessel in violation of $97.101(d) for operating over the jammer?

>>If you'd like to verify the above, you can call 800-322-1117 (FCC
>>Consumer Assistance) and when you finally get to talk to a living

>Electrolux and ham radio both have something in common, what?
>
>Burt
>
You are right,Burt. I work at a collage and young people are not only more challenged by using computers, thay make way more money with the skills they develop from using computers. Todays life style requires that they hit the bricks running in order to make a living. Ham Radio no longer offers thoses skills to a young person. Electronic component level trouble shooting is for the most part over. Ham Radio was a major feed for people who went into electronics with this skill. Few school teach it, and even fewer company want to take the time to deal with it, or pay fore it. Swap the board is all it takes and the equipment will tell you what to change. No money in it, us less you work for the government.

The students I meet who get big money, fast, do it in networking software, not with a microphone. I have out lived ham radio and the fun of electronic repair and had my electronic career change severl times to the point that it is not fun now.

I sold all of my ham equipment not because of electronics, but because of the type of foolish answers to your post, is also the type of foolishness ham radio has gone to. I know many good hams who have done the same as I have, an there will be many more to follow.

I will be blasted by many, but I have not even looked at this group in a long, long time, but your post did make me want to respond. You should have given them a computer and they would have tore your arm off taking it. They know what it take to live now, and ham radio dose not provide it.

I'm not sure that there has been a causal relationship established here. I think most jammers, etc... hold higher class licenses because they would be less likely to OWN the HF equipment to jam with if they held a code-free license. The unfortunate fact that they do, just goes to show that even some mental midgets like jammers can learn cw if they want access to HF. Just consider what it could be like without it.

Ok - perhaps not increase the difficulty of the tests but find some other
way to encourage people to upgrade and maybe learn something in the
process. I know that it took me one year to go all the way up to Extra
but here I am four years later and still learning stuff. Of course I
suppose it helps that I belong to a club that has alot of folks with a
formidable technical knowledge base.

10 and 6m have both been treated to many days of F-2 propagation this summer season. Don't be fooled just because it's summer and the bottom of a cycle. I've work many stations recently via a variety of propagation modes on 10m; E-2, F-2 and TE-2. Don't be surprised to hear about, or work, stations 3,000km or further during daylight hours.

> Radio ?

Hi Alex,

Vous devriez contacter le REF pour avoir de l'info sur la
Radio Amateur.

Pour les revues il y en a plusieurs aux US/Canada. les principales:

QST par ARRL www.arrl.org
73 Magazine
CQ Magazine (Stdard, VHF, Contest)

Aux UK mystere et boules de gommes HiHi. RSGB publie un paquet de
bons bouquins mais je ne sais pas s'ils ont des revues.

Pour les revues techniques sur les equipements QST est plus serieux
leurs tests sont tres techniques et pousses. Les autres ont tendance
a faire tester les appareils par des utilisateurs qui donnent leurs
impressions.

QST vend des rapports detailles pour les appareils testes (10/12$)
Il faut fouiller dans leur site, il y a de l'info en quantite.

(snip).....
> dipole at 7' in my first floor apartment (also a Carolina Bug Catcher
> sitting on mag mount on floor

In all reality, no eggageration here, 5 Watts on an average dipole up 50 feet will outperform your indoor antennas, even if you had 600 Watts out. Indoor antennas hung from the cieling and thrown on the floor will only give you results in those exceptional circumstances of very good propagation, and no pileups. That doesn't happen much currently. If you can manage a verticle, The Cushcraft R-5 (recently discontinued, but still available from stock) is the cheapest of the lot ($278), and over here, it performs very well on 20M. Neck & neck w/ my G5RV at 50 feet. They take turns in which performs better, but always are close. R-5 mounted only at roof level, and I'm in a valley surrounded by trees. Just talked to Bosnia Herzegovina and Azores Islands on it with 57 report with 100W. In fact with the Bosnia station, I could only get through on the R-5. Maybe you can sneak one up on your roof if you're nice to the landlord??? -- only 17 feet tall and not bad looking. Best of luck. 73, N1SQJ, Rick

I just inherited a Heath HW101 which I've cleaned up; it receives well but I'm having considerable trouble with the transmitter. Unfortunately I have no manual. Can anyone lend some advice toward troubleshooting this rig?

1. Can't load up transmitter. When in "tune" mode, I get virtually no meter reading, no matter what I do with the final and load controls. I replaced the 6146's but made no difference. If I connect a swr/power meter to the output/ant I can get a 1/4 scale reading, but only if the sensitivity on the meter is turned all the way up. So it must be less than a watt or two that I'm getting, max.

2. With key connected, there is no activation of transmitter in CW mode. All I get are some faint clicks from the speaker when key opens and closes. No tripping of relay, receiver doesn't even go quiet, no rf output. No sidetone generated either.

3. Can't find any sidetone adjustment - is it on a board somewhere?

I have poked around with a probe (insulated) and it appears all tubes are connecting okay. ANY ideas or advice would be great, many thanks, N1AEP

In a single water wave of this type (one affected by gravity forces, not by capillary forces), the water particles don't *quite* move in complete circles. Each particle doesn't completely loop back around to its original starting position. So in fact the particles do translate forward, although slowly.

"Linear" water-wave theory predicts completely circular motion but that theory contains a basic approximation that makes it a little inaccurate. Higher-order analyses can predict the non-circular motion.

Twenty meters is a toughie--a lot of big stations hang out there.
But I've worked a lot of DX there with 75 watts and a lousy dipole
up about 40 feet.

Your antenna setup is pretty bad, and sunspots are lousy just now.
See what you can do about getting a better antenna up, and soon
we'll have better propagation. One hint: Try 15 meters. It's
a lot less crowded than 20, offers great DX and great ragchews,
and is more stable than 10 meters.

BTW, my "lousy dipole" is just two hunks of wire 34' long, fed with
ladder line and a cheap transmatch. It's not much, but it works.
Hope this helps! GL and 73!

Snip

Hi Charles,

I Have been opperating with 100 watts since I got my licence with great
results. I use a G5RV on 80 and 40 meters and a R-7 Vertical on 40-10
meters. I Have worked Europe, Africa, South America and much of North
America on SSB, CW and RTTY/Pactor in the past 4 months. The Vertical
though not a *ideal* antenna takes up little room, has a small
footprint and does not have to be mounted very high (cushcraft
recomends at least 9 feet off the ground). Also I have found that when
all else fails you can almost always get a QSO going on CW.

Don't give up!!! Its' proably your antenna.

Aw, Come on Jim! You can't answer that question yourself? He is here because he knows there are some people out there (no names) who are STUPID enough to let him get them worked up. He enjoys pushing peoples "buttons". It's a power trip. Before I got my ticket, I was of course in CB. I got really bored near the end. Most of the time I would get on CH19 and say "Shut up, stupid!" just to get a fight going. It was amazing how many people would think I was referring to them (as if their names were "stupid"). I knew a lady in Las Vegas who would say "Save America, kill a truck driver today - feel better tomorrow". She had a blast.

Who is worse? Burt or the guys who let him control them?

Charles,
In the passed year and a half I have worked about 110
countries and 48 states running 100 watts.
The antennas I used were a 40ft
dipole hanging vertically from a tree outside my apartment
window and a hamstick on my car. Somedays I made contacts
left and right. While other days it seemed nobody could hear
me. If you want to work the world on 100 watts all you need
is a little creativity and patience.

John

p.s. My 5th contact running 100 watts was Western Australia on
40m SSB!

Charles:
It won't tke you long in ham radio experience to realize that the most dollar per performance is in the antenna. You are presently working with antnnas that are in the region of 1-5% efficient. You won't get out very well with them. Does your apartment house have metal drain pipes, trees, balconies? A little innovation will make a world of difference. In college, I loaded up the campus 187' flagpole.

Well I was aware of ether and certainly I am aware that there is no medium with mass in empty space. But a distortion in space/time itself could likely be the result in RF propagation. I guess there's a duality to the wave & particle theory. But in the pond analogy, if one puts a cork at point B and drops a pebble at point A, the cork will be moved up at point B with the same intensity (amplitude) as the original distortion at point A. But not by the same water. That is, the water doesn't actually travel from A to B, just the energy.

Not to get too far afield of ham radio, but I am in on a discussion group (NEOTECH, post-modern physics group) where we discuss things like this occasionally.

People like John Archibald Wheeler, Hal Puthoff, many others in the QED field have theories about this alteration in spacetime as the aether or propagating medium. Which brings up the question of WHAT is spacetime really? Each of these people has his own theory of that and I have mine too.

It's a fascinating area!

73, Zack W9SZ

> ...<SNIP>

If the CW requirement were dropped, then all the no code Hams would have access to the very limited HF bands while being able to use only phone. Thus, aside from there being many more people competing for this limited resource, they'll each always be using five to ten times as much bandwidth (3KHz minimum for phone) because they can't do Morse.

Also, what of the majority of Hams whose English, while good enough to do Morse, is not good enough to do phone? Are you going to insist that they learn conversational English (a hard thing to do) because others don't want to learn the (much easier) Morse?

So yes, if you don't take the CW test, a lot will change.

Cheers,

Chris

If radio waves altered "spacetime", then all objects would be capable
of receiving radio waves, as all objects live in spacetime. All of
the experimental observations I know indicate that you need *charged*
objects, such as electrons in a metal, to receive radio waves. Isn't
this a strong indicator that radio waves are just propogated in the
plain old electromagnetic fields we've known about since Maxwell's
time?

In the astrophysics interaction room in Bridge Annex at Caltech, they
have a "gravitational wave generator" on a shelf. When you turn it
on, a motor spins a small weight around on the end of a short bar,
while lights all over the unit blink "Warning: Gravitational Radiation".
Quite a hoot.

Tim. (shoppa@triumf.ca)

Hi Charles, this is not luck. This is a system designed to fail.
The percentage of energy not making it up out of your house has to
be in the 90s, probably in the high 90s. By all means get that
antenna up to 40 ft or higher. I regularly talk to New Zealand on
100w and a 102 ft dipole at 30 ft.

: fine with cell phones, with Ameritech donating quite a few phones.
: Supposedly, the only other person you would need to contact is the
: police, or another homeowner, why doesn't that work?

A good point.. Here's why not...
There are problems with simultaneous tracking of folks that come into the neighborhood to burglarize properties, or just to "scope-out" if we only use cellulars. We're a small, mostly owner occupied neighborhood in the middle of a large metropolitan area (Norfolk/Portsmouth, VA.). Not unusual to have youths come in from other "hoods" to check things out. Typical among many urban neighborhoods, even (& especially) nice ones.

So... what we found works best for us is simultaneous 2-way communication between multiple points, PLUS using cellular phones... Our watch shifts normally entail 3 to 6 individuals working both stationary and mobile "units". We have our cell-fones to contact police, but keep off of them most of the time, unless we're calling 911. Plus, ringing phones, even occasionally, would hinder our normally "quiet" work.

Like I said, this is just what we've found that 2-way communication is best for *US*. We've just gotten organized, and are working with borrowed radios. We're motivated to get our (owned & legally licensed) radios.

Our system, such as it is, seems to work. Last Saturday night we had a "cowboy" that was shooting his .357 magnum off around our neighborhood arrested. The alleged shooter came in to the neighborhood by car. He was recognized by watch members as someone who had fired his gun off earlier that night (but wasn't caught). So we were able to monitor his activities well by radios, and phoned 911 by cell phone when he started firing into the air again.

But I'm getting off the subject of this (tremendously useful) newsgroup... Thanks to ALL for all the responses. I'm passing all input on to our group leaders for decision. Any other ideas please send or post.

cheers,
--msr

PS: "Family use" radios??? When MY family communicates, they just yell from one side of the house to the other. Normally something like: "DAAAD!! YOU GOT A PHONE-CALL!!!" No radios necessary. Something out there for everybody,

I guess.

I watch maybe 2 hours of TV a week. I still don't have time to invest in something I will never use again in my entire life. IF I would learn code, it would be simply to get on HF and I would commence in forgetting all of it the second I passed the test. Most of my time is spent reading info that I need to pass certifications for my job. I am currently a network and software support tech and I have to CONSTANTLY learn new info and pass new test. What little time I have for ham radio right now will NOT be listening to dits and dahs! But, thats OK, by the time I have more time to spend in the hobby a no-code HF class will most likely be in existance :)

>people do when they find the responsible party.
>Curtis

First of all, no one is aware that tracking is going on, save a few on another band or repeater...those are ones I call (via landline) before I leave the house and I ask them to help me triangulate a fix on the culprit. Once that is accomplished I mark down the bearings from each of their homes on a plexi-glass covered map. Where at least three lines intersect is the area I head for.

Once in the area I use in-line attenuators or no antenna at all on an HT and go from there. No dopplers or anything fancy. It's primitive but it has been working for me for more than 20 years. Ask the folks who ran the El Paso Hamfiesta in 1992. They kicked me out of their transmitter hunting contests for winning every contest I entered. I was using only an Icom 2/AT and body shielding whilst others were using directional arrays, etc. (I don't brag much but I don't mind here.) :)

Once I am at least 99% sure that the location houses the culprit I announce that location on the frequency he is using. That is usually sufficient enough to squelch the unauthorized turkey. Once THEY know that YOU know where they are that usually stops them.

I have yet (of course it's been a few years) to see even one of them come back up....at least onto the repeater they were on in the first place.

Just last year we had someone come up onto the two meter repeater, 146.85 K1MNS in Derry, New Hampshire. The way the person spoke sounded like he had quite a bit of experience on 11 meters. Which is really nothing new these days...but his demeanor told me he shouldn't be there. I challenged him by asking him when he got his callsign. He was using a callsign that was at least 12 or 13 years old. I was N1CLS in 1982 and he was using an N1C## callsign. He stated that he had gotten his ticket "two week ago." I told him that was an old callsign and he came back and said, "Oh, did I say two weeks ago? I meant two years ago." Hehehehe...Although we did not go out looking for him he had his five minutes of fun but knew we had him. He hasn't

been back to my knowledge.

This is MY opinion: We don't need to go out to try to get every single violator prosecuted. It's the chronic ones that need that. A simple challenge or divulgence of the violator's location is usually enough to send them back to where they belong....if they are local that is. HF violations require a lot more in the way of planning, coordination....and yes....time....lots of time.

>band operators, could that be construed as malicious interference?

>FCC: I'd say no.

I'm sorry Jeff, I'd say this official did not know what he was talking about. There is a definite credibility issue here. That official should have mentioned to you about §97.101(d). I'd say that you persuaded him to answer what you wanted to hear.

That paragraph, and I quote, says:

No amateur operator shall willfully or maliciously
interfere with or cause interference to any
radio communication signal.

Jeff, you're letting your emotions run your thinking on this issue, and you are only believing what YOU want to believe. I'm not being closed minded nor am I reading between the lines. I am going by the rules say. It's printed in black and white....

Come back to reality and please show me in this paragraph where it says it is okay to cause interference to anyone but other ham radio operators. You can't. The person you spoke with did not write Part 97 and in my opinion does not even know it well enough to interpret it.

Why didn't you name the FCC official you spoke to? Was it Mr. Johnson's secretary or someone who just happened by the phone bacause no one else was around the nearby coffee machine? I'm not being sarcastic I really want to know...again there is a credibility issue here.

>Me: Okay, now what if those illegal operators shift to another frequency
>on 10M, and the amateur also shifts with them in an attempt to start, or

>continue, a conversation with another amateur - would you consider that
>malicious interference?

>FCC: You'd have to ask ``Interfering with whom?'' You're not interfering
>with an authorized transmission on that band so you are not causing
>interference. You would always have to ask ``Interfering with what or
>whom?'' to complete the picture. Thus, I would say you are not causing
>interference.

Again, ¦97.101(d) does not differentiate between authorized and
unauthorized transmissions. It clearly states "to any
radiocommunication signal."

>The conversation continued with me thanking him for their proposal to
>stop the sale of easy-to-modify out-of-band amateur equipment.

A relevant issue I'm sure... :)

>If you'd like to verify the above, you can call 800-322-1117 (FCC
>Consumer Assistance) and when you finally get to talk to a living
>person, tell them you have a legal question regarding interference
>within the Amateur Radio Service. They well transfer your call (make
>sure you have something to pass the time with - I was able to grade
>a stack of papers while waiting); someone with knowledge of the ARS
>will eventually come on the line.

I shall do that and then I will ask them to explain their response to
you and why they "advocate" violating their own rules, or even why
this person did not offer information as to how to go about getting
the violator off the air. Isn't that the real issue?

Regards for now....

If you have read this in another thread on the subject, I apologise. There are two important issues wrt HF work, namely limited bandwidth and common language.

If you use phone, you take up at least 3KHz. On VHF/UHF, where you have MHz's of space, this is (usually) not a big deal. But on HF, where you have very limited bandwidth, 3KHz IS a big deal. CW needs about 300Hz, so it is not unreasonable to require CW under these circumstances.

Secondly, given the inherent international nature of HF, do you expect the majority of Hams to learn conversational English, because you don't have half an hour a day for a month? Many people can write/read English (thus, do CW) but cannot speak it. It is far more difficult for them to learn to speak English than it is for you to learn Morse. Non-English speakers outnumber us by far. If you don't want to work international contacts, then you don't need HF, do you?

If you don't have the time now to learn CW, given all your current activities, where would you find the time to set up and work on HF? :-) If you plan on taking time from your other activities to work on HF, then you have the time to learn Morse! Morse really isn't hard!

:-)

Cheers,

Chris.

The "why don't you just buckle down and learn CW" thread is alive and well...

As one of those no-code tech's that has put up repeaters, repaired ham gear, converted commercial gear to ham, etc, here's why I haven't bothered to learn CW:

1) I'm a full-time student, and spend enough time studying science, and don't have the energy at this point to learn CW>

2) I'm not interested in CW. This doesn't mean that it isn't a good mode, isn't fun for others, etc. It just doesn't interest ME. That's what I've always liked about ham radio...there's enough different stuff to interest EVERYONE.

3) I work...a LOT. Currently ~70 hours per week.

4) I don't plan to operate HF any time soon. I don't have the cash for HF gear, and even if I did, I live in an area where antennas are a problem.

So do I ever plan to learn CW? Probably. Will I use it? Probably only to figure out CW IDers on repeaters. I'd like to have an advanced class ticket someday, so I can operate HF when at our club station, and eventually want to purchase a sailboat, which would have HF capabilities. But this is in the very distant future.

Do I think CW keeps the rif-raff off the bands? No...most convicted jammers and problem users are general class or higher. So much for that theory.

Do I like the "I learned it, so you should too" attitude? No, it's archaic. I'm sure many of the older hams know how to use a slide rule as well, but I'm happy with my HP calculator. But if you enjoy your slide rule, then by all means, use it.

Do I favor a reduction in the CW requirement for HF? Yes. If CW must remain, make it a portion of the test just like any other... I can fail everything relating to packet and still pass the exam. Fail the CW mode portion, and I get no upgrade. This doesn't seem fair.

Just my thoughts...

>that 145.01 (not 145.10) .03, .05, .07, and .09 are widely used for
>packet radio.

Ah, I see your problem. You think that the ARRL bandplan is *the*
bandplan. It isn't. It is *a* bandplan, but it isn't very widely
followed in toto out here in the real world. Here in the Southeast,
everything between 144.9 and 145.1 is assigned to packet. Other
areas may assign those frequencies to something else. This has
been a sore point between coordinators and the ARRL for quite
some time. Publishing the ARRL's bandplans in the Repeater Directory
creates problems because people like yourself will buy a copy and see
the ARRL bandplan and think it is gospel. Well, it isn't.

The ARRL's 2m bandplan is often followed in broad terms, but not in
detail. Some differences are fairly gross, for example some areas use
20 kHz repeater channels while others use 30 kHz channels with 15 kHz
inverted splinters. The ARRL plan for 70cm only vaguely resembles the
bandplan we use here for 70cm. Etc.

If you want to find out the bandplan in effect for a particular area,
check with the coordinating body for that area. In our case, that's
SERA, and the official bandplans in effect in 8 southeastern states
are published in the SERA Repeater Journal. In other areas, it will
be the bandplans of the coordinators for those areas.

If the ARRL wanted to do things right, it would publish the appropriate
bandplans in effect for particular states at the head of that state's
listings. But it won't do that, so we run into these sorts of problems
all the time.

The best thing you can do with the ARRL bandplans is to use them as
an example of what a bandplan *might look like*, but don't assume that
they represent any *real* bandplan in use in any particular area.

>
>Be careful...that statement puts you on a pretty slippery slope.

Photons always travel on a geodesic through space. In a gravity field,
a geodesic isn't a straight line. No rest mass is required of the photon
to explain the bending of a beam of light by the nearby presence of
a large mass. The photon just continues to travel on a geodesic, just
as it does in "flat" spacetime, but the geodesic is no longer a
straight line as it would be in "flat" spacetime.

If the photon had rest mass, then two photons on a parallel course
through "flat" space would attract each other (by Newton's Law of
Gravitation), and converge at some point. They don't do that.

(Note, "flat" spacetime is spacetime not distorted by the presence
of a local collection of matter.)

Can anyone make any sense of the beacon callsign on 28.253?
I'm listening to it now, it's 17:53 UTC on Jun 18th. The callsign
must be WA4 something but the W sounds like an E-M and the A sounds
like an E-T and can't make out the last three. Sounds like WA4SEX.
Which not a currently issued callsign, nor is WA4...VDT, SED, HDT

Guy needs to fix his keyer device. Is this a legit beacon?

Hi Armond, true or false, if we make the tests so difficult that nobody wants to take them then the amateur radio service will disappear. Is that what you want? We're not talking crooks here - we're talking *ENTRANCE* requirements for ten year olds. An *ENTRY* level ham doesn't need to know anything except rules, regulations, and procedures. He/she can acquire knowledge and skills after he/she becomes a ham. This "King of the Mountain" game that you and others are playing is destroying my favorite hobby and I don't appreciate it.

By all means, let's make ham radio so difficult and elite that our numbers are too few to support the hobby. Hey, maybe you can even make history by being the very last ham, so elite that you have no one to talk to which is good because you will have no frequencies left. Armond, this is not a paramilitary hobby! If that's what you want, go join a militia and be as elite as you choose.

bob,my opinion is that packet is weak signal and fm simplex.
5.10 could be a buffer for 5.11,start of repeater freqs.

>- It is much easier to design and build a CW transmitter (receiver
> design is not eased as greatly).

In the course of the forthcomming abolishment of the CW test
the design and construction of SSB and digital equipment will
be greatly simplified, to preserve the experimental character
of amateur radio.

>- If the bandpass is narrowed to 300Hz or so, the SN ratio is such
> that low power can go a long way.

Future licensees will be required to reduce the bandwidth of their voice by
training or appropriate surgery to 100 Hz or less.

>But if you're into designing and building stuff
>(which are the roots of Ham), CW is a great entry point.

Not in the future.

I'll grant this for the sake of discussion, though it's transparently
fallacious.

>Thus, aside from there being many more people competing for this
>limited resource, they'll each always be using five to ten times as
>much bandwidth (3KHz minimum for phone) because they can't do Morse.

Accepting for the moment that CW is spectrally efficient (it isn't),
won't the severe crowding give these newcomers a great incentive to go
to CW? And could you tell us why they won't use (say) RTTY, ever?
How is it that you can with 100% certainty predict the actions of
thousands of people whom you've never met?

What this boils down to is that you don't think other people can learn
or think. You instead feel you must dictate their behaviour from your
superior knowledge. Nice attitude.

>Also, what of the majority of Hams whose English, while good enough
>to do Morse, is not good enough to do phone? Are you going to insist
>that they learn conversational English (a hard thing to do) because
>others don't want to learn the (much easier) Morse?

I've worked lots'n'lots of non-english-speaking hams on phone, and
damn few of them knew conversational english. DX phone procedure is
just as formal and removed from `conversational style' as is CW. (And
morse isn't a language any more than the Times-Roman or Helvetica
fonts are languages.)

Greetings--

I may be moving to Johnstown, PA (the flood prone one) for a one year contract, and wanted to hear from someone about the amateur radio activity local to that area. If someone would be kind enough to drop me a note about any packet activity, repeaters, nets or clubs, I would greatly appreciate it.

This does not apply to Canada at all. When an amateur operates in
Canada, he operates in accordances with our regulations, not his home
country. There is nothing in the Canadian regulations with respect to
commonality of frequencies.

3802. My 736R causes power line interference

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-18 00:00:00 UTC
From: greg@core.rose.hp.com
Message-ID: <Dt7KL2.9wK@icon.rose.hp.com>
Source record: 222794

I think I know what's going on here, but I wonder if anyone else has seen this problem...

The short version of the story is that my 736R is generating a lot of power line noise, and that is interfering with my X-10 equipment. Anybody know of this problem happening elsewhere, and/or have a fix?

I recently purchased a very clean, used, Yaesu 736R tranceiver. About the same time, my wife started complaining that our X-10-controlled bedroom lamp quit working. Once I recognized the connection between the two events, I found that when the 736 was on, all X-10 communication on that phase of our house power was impossible, even when the controller and module were plugged into the same outlet. Communication was possible from the bad phase to the other side.

I have since purchased a power line "surge protector" (with an "RFI Filter" built into it), and with that in place, *AND* when my 20A 12V linear supply is turned on (homebrew job, plugged into same outlet), *then* the X-10 stuff works again. My guess is that the big filter capacitors of the supply, as seen through the power transformer, are helping absorb enough of the remaining 736 trash to allow things to work.

OK, fine, I'll leave the power supply on when the 736 is on. The problem is that last night I found that the noise is upsetting my palmtop's modem (when using the external power nodule).

So, has anyone else seen this problem with the 736R (or another rig)?
If so, is there a fix to be put in the radio, or do I have to settle for an external filter?

Thanks,

Greg KO6TH

Your antenna is probably the problem...way too low. I worked 200 DXCC
countries using only a 20 meter dipole strung at 35 feet (NOT 7' !!) and
100 watts from 1993-95, the sunspot low. Get it up and you'll get out.
Best 73, de John, KI7JB.

Terry... take a look at 9914, I've not had good luck with 9913 here on
the Cape. The spiral wound center conductor tends to "suck up" moisture
then it gets cold and the water condenses in the cable. I've had water
run out of the coax connectors. 9914 uses a foam core, it's a little more
lossey than the 9913 but it stays dry!!!
Jim
PS... Mitch says HELLO, I mentioned to him that I saw your posting.

So now we have a crime which may be victimless fraud. Has anyone who intended to pay for their airtime (i.e. cloned a phone to one on their own account) ever been convicted of this `fraud'? I find it hard to believe that a jury would go along with this bizarre legal theory, but maybe I'm just kidding myself.

>not a people we should generally admire.

Bullshit. You were hoping to start another off topic argument
between the people you managed to suck in with your troll.
Who's 'we' ? You and the mouse in your pocket, I would guess.
I doubt you will find too many hams on internet who want to
be included in the same 'we' as you Burt. Besides, I'm big
enuff to decide who I will admire without your help, thanks
anyway.

>It would be far better to talk about traffic, contests and rigs?

Yes, in the ham forums. If you want to discuss racial issues, or
history, or religion, go find the appropriate place to discuss it.
Find the skinheads newsgroup, maybe they would like to discuss
the same racist crap as you do.

>I am not laughing. Actually I am proud that there are at least a few
>hams that have a life OUTSIDE of this deadly dull hobby.

Burt, let me ask you a question. Why would you be proud of anyone
in a group of people you constantly condem (hams) ? If ham radio
is a 'deadly dull hobby', and 'less fun than watching ice melt', why
do you bother to hang around here with the rest of us bores ? Judging
from your constant repetative trolling, you must not be too proud of
yourself - obvioulsy you don't have a life outside of this deadly dull
hobby, or you wouldn't spend so much time hanging around and
stirring the pot.

Oh, and congratulations on finally being able to compose a message
without MIME and your usual HI HI's at the end. Or don't they have
MIME on the computer at work ?

>Electrolux and ham radio both have something in common, what?

OH BOY !! A Burt-a-Riddle from our resident HAM-A-ROID !!

Let's see, Burt, let me think about this for a second or two.

Electrolux has vacuum cleaners.
and
Ham Radio has Burt.

So if those two statements are both TRUE, then the obvious
conclusion would be:

Vacuum cleaners suck.
and
Burt sucks.

So there's your answer Burt. Electrolux and Ham Radio both have
something that SUCKS !!! Gee, I love a good Burt-A-Riddle.

Here's one for you Burt. Did your mother have any normal children ?

Besides that, maybe both those kids are smarter than you think. Maybe
their mothers told them never to take candy (or ham gear) from
wierdos. Could that be why you can't 'Give it away' ?

>(and even those little toy radiometers you see at the hamfests).

Hi Gary,

Which vane of the toy radiometers is pushed? Correct me if I am wrong,
but I remember it being the blackened one. Which proves that photons
have negative mass, because *more* momentum is transferred to the reflecting
vanes. If you disagree, consider the alternative boring explanation with
the gas molecules.

>This brings up my question: Is it hopeless to run HF voice at 100 watts?

No, it's not hopeless. Lot's of people run 100 watts on HF. But a few things to consider. First, the most important part of any HF station is the antenna. I take it you are using indoor antennas. Outside will work much better. Higher will work much better (to a point, but unless you get up to 200 feet, we won't worry about that now). With a dipole up 30 or 40 feet you should find plenty of people to talk to. Second, we are at the very bottom of a sunspot cycle right now. Which means HF propagation is about as bad as it ever gets. Wait five or six years and you will be able to work the world with an indoor antenna. Right now you need something outside.

In regards to only running a 100W, I basically only use 80-100W...
I run 7.251, 7.248, 14.305, 3847.5, 3945 in the mobile an at home.
At home I use a G5RV up about 40' with my IC-751 an Dentron Ant tunner.
I also work digital modes on 20, 40 & 80 at about 50W out due to the
heavy duty cycle on Pactor, Amtor & ect.

Its not so much the power, my mobile Atlas 210X only does 80-100w at
best, its how you get it to the antenna an type of antenna. The people
I talk with on a routine basis have no problem hearing me, even if I'm
not the strongest station they ever heard...

Your going to have to look hard at your antenna system, are re-consider
its layout or feed line or other factors which would apply...
I know this doesn't solve your problem, it just understates the fact
that a antenna system can either make or break you...

Just remember if your S-5 on a 100w, and if every time you double your
power you could come up 1 S unit; what would your signal be at 800W..?
100, 200, 400 & 800w Figure it out... Its not the difference of S-5 to
60/9... either.

There are some really sharp guys here on this newsgroup, an they will
probably have much better ideas on what you might need to do, than me.
Just don't give up...

Burt Fisher <k1oik@ccsnet.com> writes:

>The best selling book, "Hitler's Willing Executioners" by Daniel Jonah
>Goldhagen tells the story of how ordinary Germans (like hams) allowed
>the holocaust to take place. The author shows the ingrained deep hatred
>for Jews that Germans had for Jews before Hitler came to power and that
>there was a widely held shared view that the the Jews ought to be
>eliminated in some way from German society.

This is not correct. In fact, there was a hate against Jews in nearly
all countries of Europe before 1933, but it was limited. There were
many problems in Germany at the time Hitler came to power. They were
not more related to Jews as to anything else, but Hitler used the latent
hate in order to find an explanation of the problems of the time. Hitler
proposed himself as the saver from all the evils, his solution was
simple: all the problems came only from the Jews, therefore they have
to be discarded (later: eliminated). Hitler's hate against Jews IS NOT
the reason why he was so popular in Germany all the time, in all the
parts of the society. These reasons are more complex.

>400 watts, 600 watts, 1000 watts?

>30', 40', 60', 100', tower?

>antennas?

I run 100 watts ssb on 40 meters ,and dont have many problems in
daylight hours.I use an inverted vee up at 30 feet.My 30 years
experience tells me that your choice of 20 meters is a poor one. This
is known as kilowatt alley, plus people on 20 only listen for 59
sigs.Your antenna selection needs to be improved : as in get it
outside and up in the air if possible.I dont operate 160 meters
because I dont have the required 40 acres to get a half wavelength
antenna up, and you shouldnt either.Ten meters is good but isnt open
much in this sunspot cycle.I would try 15 meters or 40 meters with the
proper length antenna if possible.Even just getting that antenna up

and outside and resonant will do wonders . even on 20 meters.

I worked my first hundred countries with a hundred watts to a set of rain gutters! This was about 3 years ago with SFIs around 100. With conditions as they are, even a kilowatt and a beam can be tough!

>f(t) = (area)*t. Now what?

Well, a good CW operator shapes the keying to avoid key clicks; ideally,
you use a raised cosine shape for each transition. The faster the
transition, the closer to the ideal rectangle you get, and the more
you can assume the area is linear with respect to time, but you're
liable to get an OO notice for key clicks.

Good point- If it was photon pressure and the Radiometers tube
had no air then the spin would be the other direction. The
"push" would be on the reflective side.

Are th Ham bands not on option? It doesn't seem like they are running a business or anything. How would it be any different from reporting traffic problems, or communicating back and forth about how to hook up a computer, or whatever??

Sorry for the ignorant questions. But it seems if everyone in the group is licensed hams, shouldn't they be allowed to talk about what is going on in their neighborhood???

As someone considering getting into the world of ham radio, my basic question is this: is it technically feasible to set up a system whereby I could access an internet server remotely with my laptop and shortwave radio from anywhere in radio range of the server? If so, what sort of baud rates are possible, and what kind of maximum radio range are we talking about realistically? Thank you in advance for you assistance.

Geez, that's hard on my eyes. Anyway, comparing the age of a landline mode
to a radio mode is silly. Telephones are older than spark gap xmtrs, but
you use a phone daily, yes? Imagine that! You couldn't survive without
a phone, yet it's a device that's older than spark. Heck, vocal
communication is 10s or 100s of thousands of years old - are you still
using it over the radio? The idea of written communication probably can't
even be dated - yet look at what we're using to convey our thoughts!

>In that respect MORS
>E CODE
>still was invented far prior to SSB even if it was invented in the 1930s.

Yes, and your telephone is older than spark. Silly comparison, Jimbo?

> And if I can't recall every date and minutae that is too

>going from recollection".
>
>Please do study up on American English and commonly used phrases.

Here in Hawaii the "commonly used phrase" ``ball park figure'' is not used
with a 30-year error. That'd be a heck of a ball park!

>And I do know that Morse Code = Morse Code was being used in radio prior to the
>advent of CW. Can anyone say Spark Gap. Now Jeff, you go look in 200 Meters
>and Down.

Not only can I say "spark gap", I can and have built one just to hear how
they sounded. Beautiful sounding device!

>whatsoever. It also reeks of pro-code testing based snobbery. Since it was
>apparantly easy for Jeff to do it, then EVERYONE should be able to do it. Well
>Jeff it just isn't so.

Oh come now; 15 minutes per day for a week or two will get almost everyone
some HF privileges. At 5wpm you could write each dot and dash and translate
the collection after the examiner stops sending.

>I happen to know of a very smart high energy particle
>Physicist that was convicted of rape. A very disgusting situation. In my book
>as well as most others he is scum or riff-raff. So I guess that anyone can
>learn particle physics and quantum chromodynamics. Lets have a test soon!

Well if there were around 350,000 such rapist/physicists in the US I'd say
there might be a correlation. But we do have about that many coded hams.

>And since it was not a barrier to you Jeff do not extend that to all. Your
>experiences are not the be-all, end-all to everything.

True, but the importance of all hams worldwide having at least one common
HF mode overshadows the small number who can't or won't master 13wpm Morse.
For those folks, they still have free access to over 97% of the US amateur
spectrum.

>>-- End of {email!} excerpt from Jeffrey Herman

The next time you publically post an email of mine let me know in advance -
I'll use more care in my choice of grammar and spelling!

Nice chatting with you over what I thought was email,

Is it at all possible that there may be hundreds even thousands of
poeple out there that don't want to use VHF?(I know, it sound
rediculous) Maybe a no-code HF class will bring more people interested
in long distance comms into ham radio. Look at it from this
perspective, we already have a TON of bootleggers on 10m, maybe if we
can get them a license, we could at least get them to communicate
properly. It is possible, I used to be one of those evil bootleggers
back in Jr. high when I didn't have a real idea of what I was doing.
The CB I had came with "extras" and I figured it was OK to use them.
One time while I was on the air, a ham operator answered my call and
asked me if I knew what frequency I was on. When I explained that I was
on one of my CB's channels, he told me that the freq I was on did not
belong to citizens band. I apologized and didn't "flip the switch" on
my CB again. I'm sure most bootleggers aren't as friendly as I was, but
it doesn't hurt to try!

> http://www.shore.net/~jjmartin/jjm.htm
Yep! I used to bootleg when I was in Jr. High. I bought a CB and the
guy I got it from said it had "extras". I really didn't know that it
was illegal at the time(I was only 13 and you seem to think age is
important!) After a few months of roaming the bands a ham operator came
back to my call and asked me if I knew what freq I was on. When I told
him that it was a chennel on my CB, he politely informed me that I was
on a ham radio band. I had no clue what ham radio was then so I asked.
He told me that I should get a book and read up on the subject and that
he couldn't talk to me because I was running an illegal staion. He then
wished me luck in getting a license. Well, after that day, believe it
or not, I never "flipped the switch" in my CB again. I still didn't

want to learn code though, so I stayed away from ham radio until the no-code class came into being.(which accounts for my semi-new callsign) Now, with that being said, I can completely understand why a ham would knowingly broadcast over an illegal broadcast. I can also understand why the FCC would do nothing about such a situation. As far as how old I am, what is the differance? And who cares how long I've had my callsign? I've known about ham radio and ham radio operators since I was about 14, so I'm not completely clueless! In case anyone wants to know more about me, I'm now 25, have blue eyes, blonde hair, am 5'11", and can't spell to save my life.(couldn't spell way back in 2nd grade and got bad spelling grades to prove it) I do work in the computer industry as a software and network tech though.(I guess I can't be that stupid, I can figure out all this computer stuff!) Guess I need to get a news reader with spellcheck. And lastly, you should be a little nicer to us wet behind the ears youg folks, we will be the ones running the country when you are in a retirement home!

Can anyone tell me where to get a 75-100pf variable capacitor?

3856. GROUNDING AND LIGHTNING PROTECTION

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-19 00:00:00 UTC
From: fsimonds@icanect.net
Message-ID: <4q92l4$nr8@news.icanect.net>
Source record: 222623
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

Here are two sites that contain quite a lot of good information on grounding and lightning protection.

http://www.powerclinic.com/examlist.htm (mostly grounding)

http://www.polyphaser.com (grounding and protection. Read the newsletter issues that pertain to ham antenna/station protection)

Good stuff--73 Terry/WB4FXD

3857. Need parts list to build a FM detector...

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-19 00:00:00 UTC
From: gray@froggy.frognet.net
Message-ID: <4q922d$e9r@froggy.frognet.net>
Source record: 222624

Hello, I would like to build a FM detector using common parts found
at my local radio shack store. I do not want to buy a kit, instead
I want to buy individual parts and connect them on a "breadboard".

Can anyone help? Once built, (and hopefully it works), I would
like to change circuit parameters and see how the phase deviation,
modulation index, etc changes.

Please email me direct at gray@frognet.net

Thanks in advance!

Bob Gray

Hi Charles,

I empathize with trying to operate HF from an apartment location. I
would try all means to get an antenna outside, if at all possible. There
are several interesting articles posted on the web that speak to
'clandestine' wire antennas.

If that is not an option, I would suggest something like the AEA Isoloop. While it is a compromise, it will allow you to make contacts on HF at the 100 watt level. If you disguise it right, it will look like a bird feeder and you can hang it outside a patio door. Of course, as in most antennas, higher is better.

I'd stay off 20 meter ssb while in the apartment. Usually you will generate tons of RFI that your neighbors will just not appreciate. Also, you'll need to monitor your VCR when your on 80 meters. Try 20 meter CW running QRP at night and you'll do well and you won't bug your neighbors

(and your apt. manager won't bug you ;))

Good Luck es 73
Marc

4S7 - [Sri-Lanka] From June 7 to September 2 , Mario (HB9BRM) will be
active as 4S7BRG.QSL via HB9BRG.
9J - [Zambia] Since June 1st that Hans (KN6DI) is in this country and
will stay in it for a 3 months period.Only SSB.QSL via AA6BB.
CU4_dfp - [Azores] From June 21st to 23rd , CU4AH at "Farol do Carapacho"
Lighthouse, Ref DFP FAZ-004.QSL via homecall.
EM_ant - [Antartida] EM1U and EM1KA are active daily around 18 UTC. on 20m
14,133 Mhz , from "Vernadsky Base".QSL via 9H3UP.
F_iota - [France IOTA] F5TGR, F5TJP, F5TMZ and ON4TH will be active from
the 7 iles group (IOTA EU-107) for the IOTA contest. They will be
on 10 to 80m on SSB and CW.
FR/T - [Tromelin Isl.] During July , FR5ZQ will sign /T from this Island.
QRV in CW/SSB(+-15h UTC 21.300/21.320 Mhz)
GM_iota - [Cumbrae Isl. IOTA EU-123] GM3USL/P will be QRV from this Island
for the IOTA Contest.QSL via GM0KVI.
GW_iota - [St.Tudwal Isl. IOTA EU-106] From 28 to 30 of June , G8JM+G3NQT
+G3JNJ will be on this Island.QSL via G3JNJ.
HB0 - [Liechtenstein] From July 14th to 27th , DL1JBN , DL3JSW and
DK5YY will be QRV on HF (10 to 160mtrs).DG0JAG , DG0JS and DG0OKA
will work on the Satellites.
LA_iota - [Vesteralen Isl. and Lofoten Isl.] From June 16th to July 5th ,

DL2SWW will be in Vesteralen Isl. (IOTA EU-033) . In the period of
28 to 30 of June he will try to be active from Lofoten Isl. (IOTA
EU-076).
N1_iota - [USA Isl.] Chris (N1HRW) will be active June 28 and 29 from
Assateague Is, Maryland (NA-139) and Tangier Is, Virginia (NA-083)
Between July 5 and July 8, Massachuesetts (NA-148) if he gets
permission to land. During this time other islands counting for
the US Islands Award may be activated in Massachuesetts and Maine.
Check the regular IOTA frequencies.All foreign contacts will be
QSL'd automatically through the bureau.Direct QSL's can be obtained
via: Chris Taron N1HRW, 607 Harwood Ct., Champaign, IL 61821, USA
OZ_iota - [Anholt Isl. IOTA EU-088] From 14 to 19 of August , OZ5RM/A and
OZ/SM7KJH will be in this Island.Look for them on 20 and 80 mtrs
CW.
V26_wrtc- [Antigua] A reduced crew of Team Antigua will activate V26B in the
upcoming WRTC/IARU RadioSport Games on July 13th, 1996. They will
be entering either the Multi/single or Multi/multi catagory.
Decision to be made by the crew upon arrival in Antigua .They will
be active for a short time both before and after the contest on all
bands and modes.
The Members and QSL Routes for this Trip will be:
V26B Sam Harner QSL Via WT3Q
V26E Darrel Neron QSL Via AB2E
V26U Bill Hudzik QSL Via WA2UDT

My advice for what it's worth.

Listen a lot. If the signal your receiving is strong then
they should be able to hear you even with an inefficient antenna
at your end.

Listen a lot and learn what band is open when. Sunspot low now
so 40m will be dead sometimes.

Try CW on 40m.

Think about better antennas.

I've worked into North Africa from the South Pacific on
75 phone with a measured 30Watts PEP output. THis is
halfway around the world. It's all in the antenna.

3866. TRC-465 mods wanted

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-19 00:00:00 UTC
From: "James S. Kaplan" <kg7fu@combined.com>
Message-ID: <01bb5df3.e8a9d160$848260ce@surf.rio.com>
Source record: 222633

Yup. 10m and/or 'extra' channels, clarifier mods wanted for venerable TRC-465.

Tnx

>
>I am currently learning CW in order to get onto the HF bands. My major
>interest is in homebrew. CW has three wonderful advantages:
>
>- It is much easier to design and build a CW transmitter (receiver
> design is not eased as greatly).

The same is true for a FSK transmitter, only a varactor separates
a continous carrier (dead carrier) transmitter from a FSK transmitter.
(Alternatively, a shift capacitor and a switching element, IE relay,
transistor, etc, can substitute for the varactor.) Considering that
a CW transmitter must have a keying circuit too in order to differentiate
it from a dead carrier transmitter, the difference in complexity is moot.

>- If the bandpass is narrowed to 300Hz or so, the SN ratio is such
> that low power can go a long way.

It can, if CNR and SNR are the same. However, Shannon's fundamental
relation shows us that *increasing* occupied bandwidth improves SNR
at a faster rate than CNR deteriorates. In the limit case, with infinite
bandwidth, a signal can be perfectly decoded with a Eb/No of -2 db.
Decreasing occupied bandwidth raises the required Eb/No until the
other limit case where occupied bandwidth equals the signaling rate
and SNR=CNR. At that point, the required Eb/No for zero bit errors
is +13 db. (Note that the relation isn't linear, rather it is asymptotic
in the direction of the infinite bandwidth case.) Limiting required
bandwidth to less than the symbol rate (subcoding) requires a CNR
that is greater than the SNR.

What all this means is that we can copy weaker signals if we spread
them over a wider bandwidth, IE wide shift FSK, or in extremis SS,
is up to 15 db better than CW in the limit case. Or we can stuff
more information into a given bandwidth if we're willing to maintain
a higher CNR than the SNR (an example of this is QAM, or more grossly,
AM voice). To maintain simplicity, wide shift FSK (shift 3x baud) gives
us an improvement over CW of 9 db at an Eb/No of 4 db without adding
system complexity to the transmitter assuming a matched filter decoder.

>- With sufficiently selective receivers (and suitably de-keyclicked
> transmitters), quite a number of CW channels can be fit into one
> voice channel.

Yes, but the same is true for FSK, or again as an extreme case, for SS.
And since both of those can operate at a lower CNR, mutual interference
is reduced.

>Now, if all you're interested in is buying your equipment, then CW must be
>nothing but a burden. But if you're into designing and building stuff
>(which are the roots of Ham), CW is a great entry point.

I'd suggest FSK is a better entry point, especially if a good encoding
and a good ECC are used. Performance is better, but the transmitter and
receiver required to be built are virtually the same as for manual Morse.
The only real differnce is in the external coding and decoding system
used. Either a bit of VLSI and firmware is used, or conditioned wetware
is used. The former is much more cost effective than the latter, and
functionally more effective too when used with a better encoding than
OOK Morse.

>Besides, learning CW is very easy (I am doing it now). It seems some people
>spend more time whining about having to do it than it takes to actually do
>it!

Total the number of hours used in conditioning the wetware and multiply
by what your time is worth. Even if you're only worth minimum wage, the
total will be greater than the cost of the higher performance VLSI/firmware
system. And that is also time consumed which could be better spent building
amateur radio transmitters or receivers (or designing and building better
hardware modems).

Note, leisure time is worth more to most people than any other time.
That's why they work so hard all week so that they can have some. So
don't tell me that time spent conditioning wetware is free, it isn't.
It's the most expensive time you have.

>Does CW really discourage the technically interested/inclined?

It is discouraging to see so many believing myths and wasting their
time on inefficient methods. That offends the sensibilities of many
who are technically inclined (and who recognize the myths for what they
are). But more seriously discouraging is the idea that the technically
inclined will have to go through the same rituals in order to do
something more efficient and esthetically satisfying to their sense
of technical fitness.

Yah, not to mention we should all know how to generate log tables by hand in order to do gain-dB conversions, dammit!

You can't possibly have been serious about disallowing calculators. Yes, I once knew how to take a square root by hand. It was tedious, time consuming, and I've never done it once since I passed the math test. So what? I have in front of me all the calculations for a double-tuned bandpass filter. There are four square roots to be taken. Am I a more competent amateur radio licensee if I take them by hand? Will my filter function better?

How about we include some stuff in the tests that will make us better amateur radio licensees? Here's an example:

```
120 ohms
----/\/\/\/----
! !
------12V------
```

How much current is flowing in this resistor? _____

The fact that this simple question is a vast improvement over what we have now is illustrative of how dumb our present system is. No multiple guesses to memorize here. You get an answer in any way you know how, and fill in the blank. Nobody really cares how you get it, as long as you know some way to do it that doesn't involve memorizing the answer to this exact question. The voltage and resistance values would of course be different for every test. It would be almost trivial to program a PC to generate a test like this, complete with an answer key. I don't understand why we're sticking to that archaic "question pool" format.

a bunch of people wrote a lot of stuff on the topic of CW/NO CW and losing our VHF+ and UHF privalages:

OK fellows, keep argueing while they slip in the back door and take the
spectrum. One of the problems I've experienced in ham radio is constant battles amoung factions: ie... Code/NoCode HF vs VHF Packet vs Voice, QST vs 73
PacketGods vs Freespeech ATV vs Weak SIG. need I list more?

We have lost 220, we were promised 902-928 in place of it.
A recent FCC ruleing gave us secondary staus on 902-928 and the
commercial interests could take 902-928 away on a regional basis
if they so choose. 2.4 and 5 Ghz is in trouble. While we are sooo
occupied with arguing, we loose the chance for unity, face it,
Whether or not code exists is not going to stop someone from grabbing
spectrum, nor is proof of advancing technology, the only thing that is going to save it
is public pressure placed on officials not to sell it off, and that must come from
a "grass roots" effort of all of us. So please hold back on the fighting
till we are sure our spectrum is safe.

my 2 cents. Steve N8VKD

>
>Easily proved by evacuating the glass bulb; presto, no movement.

The bulb *is* evacuated. I proved that by opening one up. Big hissss,
no more workie. As further support for the fact these are vacuum
devices, here's what the dictionary says about them:

radiometer n. 1. an instrument used for indicating the transformation
of radiant energy into mechanical force, consisting of an *exhausted*
glass vessel containing vanes which revolve on an axis when exposed
to light. [emphasis added]

And they show a picture of a radiometer just like the toy I opened.

What makes them spin is "light pressure". For the 1 cm vanes in my
toy, the pressure is 4E-5 bar when illuminated by my desk lamp.
That's not enough to spin against atmospheric drag, but the vanes
spin like mad in vacuum, where only the friction of the bearing has
to be overcome.

>the jammer?

Let's not take this to the extremes. That's like me asking, "What
would happen if the sun was to go red giant tomorrow?" It's a totally
different topic.

We're talking about finding illegal operations and then trying to get
them to go away....not about having a legal operation already in
progress that begins to receive interference. Let's keep the topic on
track here.

>>>If you'd like to verify the above, you can call 800-322-1117 (FCC
>>>Consumer Assistance)

Is that the number one calls for license status in Gettysburg?

>>> and when you finally get to talk to a living
>>>person, tell them you have a legal question regarding interference
>>>within the Amateur Radio Service. They will transfer your call (make
>>>sure you have something to pass the time with - I was able to grade

>>>a stack of papers while waiting); someone with knowledge of the ARS
>>>will eventually come on the line.

Wow! What a bucket of worms we have here! I just spoke to Norm Bliss
of the ARRL Regulatory Information office. I'm not going to quote our
conversation verbatim but basically it amounts to federal cutbacks,
and what have you, and that non-amateur to amateur interference seems
to be at the bottom rung of the concern ladder for the FCC. The
Amateur Auxilliary can't even do anything about this type of
interference... Just amateur to amateur.

What I got out of the conversation is that while it may not be the
best way to handle the non-licensed interference problem, there is
serious doubt that any action will be taken against an amateur who
willfully or maliciously interfers with that type of signal. For all
practical purposes it would not be considered willful or malicious in
the first place. Almost to the point that, that type the interference
is not really a signal....I don't like it but I guess that's the way
it is for now.

Part 97 does not discuss this issue....this is the bucket of worms.
97.101(d) says any radio communication or signal....but.....

It's like, since everyone's doing it...let's jump on the bandwagon.

You will notice that the vast majority of publicized busts are amateur
to amateur interference related. That's a little higher up the ladder.
I understand that bootlegging into the commercial bands isn't even
very high on the ladder.

Once the FCC gets settled and Maryland becomes the focal point, there
will be a 1-800 number to call for interference type complaints.

>If only DFing on 10M was as simple as on 2M...

I heard that an Amateur Auxilliary member was tracking an interfering
signal...and the violator charged him with stalking. Go figure with
that! Also, people in areas such as New York City, where cab drivers
are using two meter equipment in the two meter band, have been
threatened with bodily harm for their actions to clean up the illegal
operations.

I feel that things would be totally different with a fully staffed
FCC. The cutbacks occurred quicker than the means to deal with
enforcement of the rules using less manpower. It may catch up one
day. But for now it seems apathy runs supreme on all sides.

I guess anyone/anything can work effectively under ideal
conditions...[learned in the military]

>If I knew you were going to get so emotional about this issue I'd never

>
> antennas?

Hi Charles. The sunspot cycle is at or near its low point for the cycle,
so the upper bands are very poor -- I suspect this is part of your
problem -- as it is with the rest of us.

Second the power out is not anywhere near as important as your antenna.
And No you don't need a huge tower and a beam. Several of us here in San
Diego with antenna restrictions have Cushcraft and Hy-Gain antennas such

as the R5, R7 and DX-77 and are quite successful at working DX when the bands are open. These antennas are mounted at 6 to 10 feet off the ground and since they are "half wave end fed antennas" they work quite well without radials. These verticals have a good low angle of radiation for DXing.

One of our group on the San Diego DX Cluster has worked 104 countries with 6 watts and an R5. These may sound "incredible" unless you have tried it, turns out from 6 Watts to 96 watts is about 12 dB or roughly 2 S-units. So the 6 watter compared to the 100 watter is down 2 S-units or so. With 6 watts, several 10,000 mile plus contacts and QSL cards are in the log.

For dipoles, inverted Vees and beams -- you need to get em up in the air, as the radiation patterns are strongly influenced by height. In general, the higher these antennas are -- the lower the radiation pattern. That is why the big towers for the beams and dipoles. Note that a properly designed vertical can work well at or near ground level.

And no, the 160-20M bands are not the exclusive territory of the "Big Guns". I know several DXers who have worked DXCC with 100 watts and antennas at 40 + feet as well as DXCC with 6 watts and a vertical as mentioned before.

During the last hours of a contest or the last days of a big DXpedition, many times the DX is begging for contacts --- easy pickins.

So hang in there -- when the sunspot cycle starts to pick up, you can work 10M DX with a wet noodle and a coupla watts. I know of one DXer who loaded up his rain gutters and worked many Asian African and Europeans on 10 Meters.

73 and Good Dx
Rod
The R5er

>line noise, and that is interfering with my X-10 equipment. Anybody know of
>this problem happening elsewhere, and/or have a fix?

Greg, the FT736R uses a small internal switching power supply. These are
known to cause RFI problems. The simple solution is to get the DC cable for
the FT736R and run the rig off your big linear 12 volt power supply instead.
The harder solution is to go into the FT736R's switcher and bypass hell out
of it right at the board level to get rid of the crud. I have the switcher
for mine on the bench right now doing just that (as well as replacing one
of the switching transistors which popped). This supply has to run right
at its limits to power the FT736R, and it isn't very well shielded either.
I've been running the rig off an Astron linear supply while I tinker with
the switcher, and that works so well I may not put the switcher back in.

So what are syaing is that CW tests are a filter. Maybe not a lid filter, like many see it (though often won't admit it), but as a way to keep YOU from getting crowded on HF. Maybe we need a secret handshake.

>Also, what of the majority of Hams whose English, while good enough to
>do Morse, is not good enough to do phone? Are you going to insist that
>they learn conversational English (a hard thing to do) because others
>don't want to learn the (much easier) Morse.

Well. Thas point has some merit. Some. There are other fields of work that require knowing a specific language to an extent.

Aviation is one field. The "official" language of international aviation (air traffic control) is english. Other languages are used, but for international operations, english is the standard. This does not mean that you have to be able to speak english to become a pilot in your own country - but if you want to leave your borders, it is almost a necessity. China recently announced that starting in about 2 years, ALL of their ATC will be conducted in English.

What does that have to do with ham radio? Am I suggesting we have an international requirement to speak english on amateur radio? No. I am saying that perhaps there is nothing wrong with having a common "language" for certain radio operations. Morse code itself is not a language, but we have a "language" (terminology. prosigns, etc) that uses the code's synmbols. But do we have to require it? Will Morse code die if the requirement is eliminated, or if the speed requirements were just reduced? I doubt it.

Even though I am a no-code "tech minus", I still support the idea of a minimum morse code requirement. What I don't agree with is the

"incentive" licensing structure. What do we gain by reserving spectrum in the U.S. (specifically where phone operations are permitted) for operators that pass a 20 wpm code test?

I have never understood what we gain by having 5 operator classes (excuse me, SIX classes, since tech plus has it's own official status). And save your breath if you think you can tell me why the current structure is a good idea. I have heard all the arguments trying to support it and they have yet to convince me that I should change my mind.

>So yes, if you don't take the CW test, a lot will change.

THE test? We have three of them here. If we elimate two of them, that will change things too. But will it be a change for the worse?

(BTW...you mentioned "the majority" of hams that don't know enough english to use it for phone operations. On what stats to did you base this claim? I am not saying that I know the numbers... But based on the number of hams in the U.S., other english speaking countries, and countries where english is a common second language - I could be easily led to believe that a majority, that is over 50%, of licensed hams in the world can speak sufficient english for phone ops.)

3880. Mexican classes of license?

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-19 00:00:00 UTC
From: ring@porky.cb.lucent.com
Message-ID: <4q9ess$a2o@nntpa.cb.lucent.com>
Source record: 222647

I have a ham friend who will be travelling to Mexico, and he may be encountering hams there. If he's fortunate, he'll be able to use their equipment to call me back here. He asked me to make up a list of schedule times and frequencies.

Having an extra-class license, my first impulse was to specify frequencies in the extra-class portions of 20. I hear lots of Spanish QSOs in that portion of the band. However, I don't know for sure what the Mexican HF band plan looks like.

Does anyone know?

(I also need to check into third-party agreements and whether or not US hams can transmit just by tweaking their callsigns, as in Canada, AFAIK.)

Thanks in advance.

Sigh, I see I was being too kind. You really don't understand what you're saying after all. The shape of the keying pulse (switched DC) determines the interval during which power from the transmitter is radiated, and any deviation from a rectangular shape changes the amount of power radiated during that interval. It has nothing to do with what you're talking about above. But it does affect the total number of photons radiated during a dot since that is a function of the total energy radiated from the system in one dot duration. And that's still keying waveform duration times transmitter power during that interval. Energy = power * time

>>doesn't give exactly the correct answer. You really need to take the
>>integral of the area under the pulse. If the CW envelope were a true
>>rectangular pulse, then we'd have sidebands out to infinity, and that
>

>The only time you can talk about a single-mode is when you've got a plane
>wave going off to +/- infinity. (Well, you could also do it with periodic
>boundary conditions, but those don't exist in our case.)

Alas, you're still off in la-la land. The real sidebands, as I noted in the material you snipped, are a function of 1/risetime for the keying waveform. If the ARRL recomended 5mS risetime is used, the sidebands are at +/- 200 Hz from the carrier. If the carrier is at 14 MHz, the energy spread for the photons emitted is 0.0028%. That

is a small enough error percentage to ignore under most circumstances,
but one further observation reduces it to zero. That observation
is that the keying sidebands are *symmetrical* about the carrier.
That means that for the total energy expressed in higher energy
photons in the upper sideband there is a matching total energy
represented by lower energy photon in the lower sideband.
Since it takes fewer high energy photons to make a certain total
energy than it takes low energy photons to make that same total
energy, the net number of photons emitted in toto is the same as
if they had all been of carrier energy.

We do not care about antenna pattern shapes since what we want is the
total number of photons emitted during one "dot", not the number of
photons emitted in a particular direction, or contained in a particularly
shaped volume. We can assume an isotropic radiator if we like, or a very
directional beam, it doesn't matter.

What can matter is antenna efficiency, of course, but for this simplified
discussion we can assume a 100% efficient antenna and feedline. If we
want to include real loss numbers for a particular setup, we can multiply
the formula result by the efficiency percentage of the real system to
get the total number of photons actually emitted. We still don't care
where they go because that wasn't the question asked.

>realistically? Thank you in advance for you assistance.
>
>-ST

It is technically feasible, though there may be legal problems with the content. On shortwave (we call it HF) you are limited by regulation to 300 baud on all bands except 10m where you are permitted to run 1200 baud (but with the current sunspot minimum 10m isn't very useful for worldwide communications).

But we run *half-duplex*, and there is protocol overhead, so those numbers should be reduced considerably to be comparable to telephone modems. Figure about 100 baud equivalent on most of HF and maybe 400 baud equivalent on 10m (with a clear frequency, contention on a busy channel can knock those numbers down even more). If you can live with that, then you are set. But you probably don't want to live with such low rates so you need to look at other options.

If you look at the amateur VHF and UHF spectrum, you can run baud of 9600, 19.2kb, or even 56 kb. Even given the half-duplex and protocol overheads, the latter speeds are still pretty snappy. But there's a catch, VHF and UHF won't give you worldwide coverage directly. You'll need some form of relay. Now there are terrestrial relay networks in amateur radio, but most of them haven't moved to the higher speeds yet. However, there are amateur radio satellites. The latter can give you realtime hemispheric coverage at times (the high orbit birds), or global store and forward (the little LEOs), but the latter wouldn't be realtime. It'd be fine for Email though.

If all you need is Email exchange, then the Pacsats will serve, or even the slow HF links will do since you don't need realtime response. But if you want to surf the web, you're going to have to be in UHF simplex range (about 50 km) of the wired net connection, or have access to one of the few fast amateur relay networks.

First of all, to accept this logic, I would have to grant you the equivalence between HF and VHF. There is no such equivalence. I'm sitting here chuckling to myself trying to picture UPS trucks, cell phones, and satellites with 40 meter dipoles attached to them - not to mention watching them trying to compete with stations like the VOA and Radio Moscow. The differences in propagational phenomenon are obvious, and the characteristics of VHF and above are no doubt better suited to the proposed applications. That the HF frequencies are used by CW operators has absolutely no bearing on their desirability (or lack thereof) to commercial and industrial users.

The attack you refer to (I suspect) was on a highly underused portion of the 220 band Michael. Had there been more operators there, there would have been more opposition. But new hams can hardly be held accountable for the fact that across the nation there are relatively few repeaters on that band. The fact that the United States is one of the few nations in the world with an amateur band on 220 MHz does make the situation even worse. The equipment is more expensive and less available.

If you want to put up a repeater in the amateur service, one way to go about it is continually to monitor the band for unused frequencies. When you find one, you put up a repeater, and petition the local coordinators to use it. That's essentially what UPS did successfully with the FCC.

These frequencies were targeted as much for their suitability to the proposed application as they were to the degree to which they were used in the existing service.

From this, most reasonable people might conclude that band occupation IS important for holding on to spectrum. The no-code license has obviously created a resurgence in interest in amateur radio, and to deny that this is a good thing for the hobby brings your values into question Michael.

Come on, Burt, don't be silly. You are giving up argumentative territory
by and by, territory that you never really had covered by arguments or
facts, just by hearsay from a book, that poses for a summary of facts,
which it is not, as it selectively ignores all those facts that would have
made it objective .... and a non seller.

To sell, the book had to be sensational, o r in the words of review
published about Goldhagen's book in the British magazine "The Economist":
An irresponsible way of bending facts

.... and certainly not what you would expect from a Harvard professor.

I took the liberty to send you that book review from The Economist by
snail mail.... But then Burt, I would want you to think about this:

What Burt says about Germans,
tells much about Burt
but hardly anything about Germans.

Burt, if you have brains between your ears, then stop this thread. You
already transgressed from being a misinformed simple mind into making a
fool of yourself to best of your ability. Only oxen and mules are this
stubborn in holding on to a losing position. I never would have expected
that from an intelligent being.

Siegfried, KB2YVC

Is there intelligent life in outer space? Yes, of course there is,
and testament to that is the fact that they simply not waste their
time with establishing contact with us...

I agree that Code Quick is an excellent tool if you just want to get to the 5 wpm test. I aced the Tech Plus 5 WPM test after using it. However, I and several othe guys in our radio club experienced probelms when we trie to go forward to the 13 and the 20 wpm levels. I just passed the 13 wpm test last month but it was hard because I still repeat the catchy sayings (ie dog-did-it for D) that I could not break the habit and the conversion slowed me down and made me miss a lot of letters.

To overcome that I used the computer and Morse Academy and practiced words and call signs to make the associations automatic through sheer brute force. I may work on the 20m wpm now that the associations are almost automatic for me. Bottom Line: I would not have learned code without the Code Quick tapes and the software!

Just because amateurs wouldn't have to pass a code test doesn't mean
they won't learn and use code - therefore, your claim appears
fallacious.

I suppose if you're looking at how many transmitters can be active
at the same time without interference, lower bandwidth modes look
better. However, if you're looking at how much information can
be transferred in a given amount of time in a given amount of
bandwidth, CW doesn't do so well.

>Morse - it isn't a language, it's much, much easier. I'm sure anyone
>can learn it (there I go again, thinking others cannot learn).

Actually, the reason Morse code crosses language barriers is the use
of a limited vernacular, and it actually forces people to use
enough English to handle at least voice DX. The only thing
Morse offers in addition is the non-spoken communication, which
avoids the problem with accents.

>Obviously I have touched a raw nerve here. Please back off with your
>unpleasant attitude. I was giving my opinion about why I think the
>code requirement is good. If you don't like it, that's your right, but
>please be a little more civilised in your objection.

What? Ross seemed a little hot but nothing near what is commonly seen
in the code requirement discussion, especially when code-requirement
advocates start claiming anyone that doesn't learn code is lazy and/or
stupid ;-).

This sounds familiar; when I was in the Coast Guard our coastal navigation radio beacons used a code wheel with a lever switch running over the edge of the wheel to key the MCW xmtr. Occasionally the set screw that held the wheel in place on the motor shaft would loosen up, and the lever switch would cause the wheel to slip a little (when a nub on the wheel was trying to close the switch). Wonder if WA4SLT/B is using a device?

Jeff KH2PZ / KH6 (currently constructing a "Privately Maintained Marine Radio Beacon" for the Ala Wai Harbor; callsign will be "AW")

>a CW transmitter must have a keying circuit too in order to differentiate
>it from a dead carrier transmitter, the difference in complexity is moot.

Gary, you're a riot! Let's see, the CW xmtr keyer can be built from a
hacksaw blade. Now what are you going to use to key the FSK xmtr? Can
you build a keyboard from a hacksaw blade? And let's not even begin
to discuss receiving systems. Morse can be deciphered in one's head,
but in 20 years of hamming, I've only heard of one person who could
decode FSK mentally.

>>Besides, learning CW is very easy (I am doing it now). It seems some people

There are folks who work cross word puzzles, play computer games, do
math problems, learn a foreign language, etc. All of these activites
involve "wetware" conditioning (silly expression, Gary). How much
could one earn working the hours spent learning Tai Chi?

Now, the hours spend improving one's code speed translates into a
lifetime of learning and fun on the ham bands. Can you place a price-
tag on "fun"?

>Note, leisure time is worth more to most people than any other time.
>That's why they work so hard all week so that they can have some. So

>don't tell me that time spent conditioning wetware is free, it isn't.
>It's the most expensive time you have.

Time spend watching TV falls into that catagory. If one worked on the code *just* during the TV commercials each evening, that person would have an HF ticket within two weeks. Heck, one could conduct their code practice during the morning and afternoon commute.

>>Does CW really discourage the technically interested/inclined?

>It is discouraging to see so many believing myths and wasting their
>time on inefficient methods.

Our voice modes are highly inefficient methods of passing data, yet SSB and FM are the most-used modes today.

>That offends the sensibilities of many
>who are technically inclined (and who recognize the myths for what they
>are). But more seriously discouraging is the idea that the technically
>inclined will have to go through the same rituals in order to do
>something more efficient and esthetically satisfying to their sense
>of technical fitness.

And what research and experimentation are these technically fit folks going to conduct on HF that couldn't be done on VHF with a code-free ticket?

Very good points, which is why I am in favor of the NII proposal at 5 GHz, even though the current NPRM doesn't go far enough in my mind. Hams are in an excellent position to provide NII links, and something like that might breathe new life into the hobby.

Unfortunately, the ARRL will do it's usual short-sighted knee-jerk and try to kill it, even though that will be just another nail in our hobby's coffin.

>operations.

There was an L.A. ham on here that mentioned the threats made to the
owner of the 147.435 MHz repeater owner when he spoke of shutting
that machine down due to the garbage that resides on it - a case
case of hams threatening one of their own.

>I feel that things would be totally different with a fully staffed

>enforcement of the rules using less manpower. It may catch up one
>day. But for now it seems apathy runs supreme on all sides.

The Honolulu FCC staff, with the aid of the US Marshalls, shut down
and physically removed a pirate FM bcst station here a couple years
ago. Now that the closest FCC workers are 2000 miles away, one
wonders if any enforcement of any kind will ever take place here again.
(Keep in mind that Honolulu is the nation's 11th largest city.)

Hi Phil, I think this was a careless statement. I don't know of any tnc that will equal a good human code operator. I'm working on one, but, so far, it's only better than me. :-) It appears to me that DSP techniques are the only way for CW machines to get the best of most humans. It's something like chess. Machines can beat most people all the time and all the people some of the time but not all the people all the time. But make it Coherent CW, and there is no contest - machines win by a landslide.

Ah Contraire to the Subject Title!

I recently went to my local Radio Shack with a need for a device to split my two telephone lines into separate lines for the main phone and a second line for my computer. (The wife griped until I ordered a separate line for the computer). The sales person at RS immediately gave me the correct device and cable. They have a great book on telephone wiring as well. I have had many other positive experiences with RS over the years.

At our RS store, the folks know where everything is and have a good basic understanding of the merchandise.

RS has some excellent merchandise available -- top-rated speakers, hi-fi and they have not sold all those 2-meter rigs without reason.

Thank goodness for RS, convenient, fast service, and ready availability of common parts. And no $25.00 mail order minimum.

As a ham -- whose dog bit thru my R5 coax --just before the contest -- I can attest it is nice to have RS in town. (Coax is now in PVC pipe)

You want an Electronic Engineer's response to your IMI --- go to the store where they employ EE's -- if you can find one.

No I don't work for RS, never have and have no close friends there. Just thought I'd toss my 2 Watts in to the ether.

73
Rod

PS some really interesting items at the Tandy WWW:

http://www.tandy.com/

Also I've heard of an 800 number for technical support, ask RS.

You should keep in mind that the gross margin (350-195=155) on that unit goes to pay for quite a few expenses, such as sales commissions, manager salaries, turning on the heat, lights, air conditioning, paying the rent and a whole lot more. If you work in any retail type establishment and pay attention to what things cost and what they sell for, you will see similar things. One important factor often forgotten is that most retail businesses must buy their merchandise and then try to sell it after it arrives -- and so there is a financial cost since the vendor will want to be paid in most cases before all the product is sold. After all these costs are deducted from the gross margin, you are left with net margin -- then you still have to pay taxes, and more.

I'm sure this is one of the reasons that many small local ham radio dealers have not continued in this part of the business -- if you have to maintain a storefront presence, your gross margin must be a lot more than a catalog shop so that there is <<some>> positive net margin!

>Is it hopeless to run HF voice at 100 watts?
>My luck has been rotten...

Power is not your problem, it's your antenna. I've worked over 150 countries with 100 watts and a dipole, almost all on 20 meter SSB. However, the dipole was up around 25 feet, pretty much in the clear. Remember, 1000 watts is only 10 dB more than 100 watts, and one S-Unit is 6 dB. That KW will only buy you about 1.5 S-Units. Your best bet is some sort of "stealth" antenna. You can make a dipole out of very thin magnet wire, using clear plastic rods as center and end insulators and black twine for support; it's the next best thing to invisible. Or maybe a 1/4 wave vertical up a tree trunk, with a good ground rod at the base. Not ideal, but lots better than your indoor ant. Just get something outside and up a little, and you'll do lots better. Best of luck. 73...

Speaking for myself, I found the cw test more of a challenge than the written test for extra. I welcome the addition of more technical people to the hobby, and wouldnt mind a more technical written test.I dont think we should lower standards just to increase our numbers.If you dont want to learn cw, then you shouldnt have to, but lets not knock cw operators just because they have a skill you dont.

Sincerely yours
Glenn

>yourselves, and the (existing) cell phones to call the police.

I hate to give thumbs down to this idea but it has some flaws that should
be addressed.

1. Getting a group of people to "just get ham radio licenses" may be
easier said than done. While public service is part of amateur radio,
and an important one, it goes hand in hand with a desire to learn about
radio itself. You should get a ham radio license because you are
interested in radio as a hobby/learning experience and are interested in
learning what is required for the license. Then you get a license that
lets you do things that most other radio users can't.

Ham radio might work for this group if everyone that needed a radio was
interested in the technical and regulatory aspects that you have to know
in order to become a licenced operator. Other radio services that would
probably serve this group just as well do not require operators to be
licensed. You just show them where PTT and volume control are and they
can usually do their job from there.

2. You don't usually have parades with the same communication needs
every night in the same area. Communications, on a regular basis that
are more appropriate for another radio service should not be conducted on
ham radio. In fact they are prohibited under 97.113(a)(5).

We amateurs provide communications assistance at parades, etc. because
most of us like to help out and it gives us practice in using organized
radio communicating skills. We don't do it because the amateur radio
service is intended to be used for supporting parades. It just helps us

stay prepared for real emergencies when our operating skills are needed as much as any technical skills we have.

No, I can't say I agree with the idea that ham radio would be the best answer here.

> 200 METERS AND DOWN, an inexpensive paperback available from the ARRL.

Please note that I did not refer to CW = continuous wave which is merely a modulation method. I referred to Morse Code = Morse Code specifically. I am as guilty as any of using CW and Morse Code interchangably which is very common but inaccurate, but in this situation I was careful to use the correct term Morse Code since that is what is pertinent and in fact what is tested for in the 1X elements. As a matter of fact when being tested for the 1X elements CW is not being tested since most likely it is coming over tape or being generated by a computer, nether of which uses CW for transmission. In that respect MORSE CODE still was invented far prior to SSB even if it was invented in the 1930s. And I'll look it up tonight in my copy of 200 Meters and Down. As well as history books containing references to Morse Code = Morse Code. Been there done that. I'll have to find it since it has been years since I looked at it. Probaly in some box somewhere. And if I can't recall every date and minutae that is too damn bad, since I did use ternminology that indicated that I was using "ball park" figures. The word "when" in this context generally indicates that I knew that the date was somewhat inncaurate as well as the use of the words "just going from recollection".

Please do study up on American English and commonly used phrases.

And I do know that Morse Code = Morse Code was being used in radio prior to the advent of CW. Can anyone say Spark Gap. Now Jeff, you go look in 200 Meters and Down.

>
> The fact that the riff-raff can learn code just goes to show that anyone
> can. It's no barrier.

Ok, well using Jeff's kind of logic that means that anyone can learn just about anything since someone has done it. This statement just doesn't have any value whatsoever. It also reeks of pro-code testing based snobbery. Since it was apparantly easy for Jeff to do it, then EVERYONE should be able to do it. Well Jeff it just isn't so. I happen to know of a very smart high energy particle Physicist that was convicted of rape. A very disgusting situation. In my book as well as most others he is scum or riff-raff. So I guess that anyone can learn particle physics and quantum chromodynamics. Lets have a test soon!

And since it was not a barrier to you Jeff do not extend that to all. Your experiences are not the be-all, end-all to everything.

If we accept Einstein's Special Relativity, we have to ask, "slowing
down with respect to *what*?" The red shift is the same in every
direction we look. If we're moving near lightspeed, that would imply
that in *some* direction galaxies are moving faster than lightspeed
in order to have that much redshift vis us. Einstein says that's
impossible. We could postulate that we are at a special location,
the origninal center of the Big Bang, and everything is receding
from us a near lightspeed. But there are good reasons not to think
that we occupy such a special place. The standard expansion model
explains the redshift though, so Occam's Razor says we should stick
with that unless something which better describes the process comes
along.

>: Einstein did not compensate for
>: any such phenomena. He demonstrated that only in systems

>relativity which says we cannot measure our absolute velocity

>because we can't do it with absolute distances and times.
>Just like Einstein, we can't measure it but we can sure
>think about it.

Archemedes said, "Give me a long enough lever, and *a place
to stand*, and I can move the Earth." (He said it in Greek
of course.) The key here is the place to stand. Einstein
says there's no special reference point we can use for
absolute distance or time. That's a Newtonian concept.
The very heart of relativity is that all motions are
relative to all other reference frames. There is no
special frame we can call absolute.

>: the speed of light (a quntity which he deduced was a
>: universal CONSTANT; not changing no matter HOW one
>: should choose to measure it, it don't change!)
>
>Then how do you account for the latest results that measures
>the speed of light as something that is changing unless the
>measurements themselves are being affected by relativity?

How about the equipment and techniques are getting better, so
the measurements are simply becoming more accurate? If early
measurements are high because of round off error due to the
limited precision available with early techniques, then as
techniques improve, the round off error decreases as more
decimal places are added. That refinement will show a decreasing
velocity, IE 300,xxx km/s, 299,9xx km/s, 299,89x km/sec, etc.

Gary

Yeah, this is a compelling argument. I started pulling a vacuum
on the toy I drilled. It started spinning again when I pulled
26 inches Hg of vacuum on it. It was still spinning after the
pump ran for 4 more hours. But that isn't conclusive because
the pump can't pull a really *hard* vacuum.

Source record: 222505

Does anyone know of an active radio amateur in the Netherlands Antilles, specifically Curacao?

My father in law has just moved out there and he is a radio amateur and I would like to start working to Curacao from the UK. He doesnt have his kit set up yet so I would like to try to work to some one else on the island.

Thanks for any info

>Without a Morse requirement and congestion on the voice bands, how long would
>the CW reserves remain just for CW

Nitpicking I suppose, but for the record, there are no exclusive CW
reserves below 30MHz.

> (I already hear a number of SSBers operating
>on the CW realms)?

Many other countries (eg Canada) allow phone in any HF band segement
as I believe.

>A rhetorical question to those who say they wouldn't use Morse, thus it's a waste of
>time. I suppose the same argument can be used for the technical component of
>the Ham tests with most people these days.

Except the technical component is a specific goal of part 97's
definition of the service. No such similar specific relationship
exists for CW testing.

> They buy their equipment, so why
>should they have to learn Ohm's law and all that other "technical" stuff? After all,
>they aren't going to use it.

The technical aspects have far greater application than just
building your own equipment.

>Heck, Radio Shack has radios and antennae off the
>shelf. People are so busy, why should they have to study the tech stuff? Their
>free time is their most valuable time. If they want to build a radio, they're not
>being stopped from studying it, any more than the Morse proponents.

And, as you well might guess, most people do purchase their
transceivers...BUT many also build and or integrate peripheral
items such as power supplies, antenna systems, etc.

>For those unable to read between the lines, I oppose this viewpoint. In fact, I
>believe the tech components should be strengthened. I haven't written a Ham
>exam yet, so no-one can accuse me of trying to create an exclusive club of which

>I just happen to be a member.

I have already suggested, repeatedly, that the simplest improvement in theory testing would be to eliminate the use of specific component values in those sample questions that involve formulas. Doing so would allow for component values to be changed over a wide range and avoid any aspect of memorization for those questions.

I am looking for someone with an old call book. I'm trying to trace my father and/or grandfather's call sign. I got some of this info a few months ago, but lost it in a hard-disk crash. Anyway, the calls were both issued around 1955 or 1965 to Harrison Peyton Chenault Sr. and Harrison Peyton Chenault Jr. both with addresses in Dallas, Tx. The call signs (I think) were W5CCW or W5CWW or similar. Thank you for your help!!!

Yes, there's a small battery soldered to the board which holds the memory presets. If that battery is toast, it can cause havoc with the radio's presets. I'm not sure if it affects the radio's ability to perform other functions, though.

Serge,

Maybe I'm confused here. Isn't the the TH-28A a mono band radio?
I could be thinking of the TH-22A. Anyway, it definitely takes
a dual-bander to do crossband repeat.
Anyway, if it IS dual, I don't know of a mod for you.

Anyone else care to comment?

When travelling, I almost always leave a radio on 146.52. Usually
I hear nothing, or virtually nothing, all day. Occasionally I'll
call, but I've never had anyone come back to me. I leave the other
side of my dual-band rig set to 446.00 (talk about *dead*) or else
148.15 to see if Civil Air Patrol is up to anything near my location
as I motor by.

ARLD030 DX news

ZCZC AE72
QST de W1AW
DX Bulletin 30 ARLD030
From ARRL Headquarters
Newington CT June 20, 1996
To all radio amateurs

SB DX ARL ARLD030
ARLD030 DX news

This week's bulletin was made possible with info provided by Roberto, IK2MRZ, Ingo, SM0DSF, Gary, K8AE/7, Mauro, I1JQJ/KB2TJM, Dave, KC9IM, Tedd, KB8NW, the OPDX Bulletin, and Contest Corral from QST. Thanks to all.

MIDWAY ISLAND, KH4. Frank, AH0W/OH2LVG, is heading up an international team of ops for a serious operation from Midway, slated for early August. QSL via KE7LZ.

FAROE ISLANDS, OY. Listen for Ingo signing OY/SM0DSF for 2 weeks starting June 22. QSL via SM0DSF CBA or bureau.

GUINEA BISSAU, J52. Dave, KC9IM, leaves the states July 18 for a two year assignment with the State Department. He hopes to be on the air as J52IM sometime around mid-August when equipment arrives. Plans are to be on 40 through 10 meter CW and SSB. Try the 14236 and EU DX Nets, and the 10 Meter PT DX Net. Some RTTY is also planned. QSL via KB9XN.

UGANDA, 5X. Peter, ON6TT, has received the call sign 5X1T. He will be QRT for two weeks starting June 21 when he returns to Belgium on holiday. QSL via ON5NT. One of Peter's technicians, Ake, SM4ARJ, may be QRV as 5X1AR or 5X1ARJ soon. Father Sebastiano, 5X4C, remains QRT after the April attack on his QTH.

WESTERN MALAYSIA, 9M2. Tex, 9M2TO, has received a 4 element Yagi for his 6 meter station.

TAIWAN, BV. Listen for BO0KS from Kin-Men Island, IOTA AS-102, July 26 to 29. QSL via BV2KI.

AMERICAN SAMOA, KH8. Don, N5OLS, will be on the air as KH8/N5OLS over the next three years, all bands/modes. Try 14218 and 14224 for

SSB, or 14030 kHz at 0300z for CW. QSL via AA5BL or direct to Don Barclay, Box 8, Pago Pago, AS 96799, USA.

SYRIA, YK. Marco, VE3MJQ, operates from the Golan Heights occupied station as VE3MJQ/YK. He has only 2 more months left in the camp before he returns to Canada. Check around 14200 kHz from 1900 to 2200z. QSL via VE3MJQ.

ZAIRE, 9Q. Piero, IK2BHX, will sign 9Q5HX until the end of June. He operates most of the time on 30, 20 and 17 meters and works both CW and SSB. QSL via IK2MRZ.

YEMEN, 7O. Geraldo, IK8JAF, is here on business for about a month and has received an operating license. Listen for 7O1JAF on Thursdays and Fridays from 1600z between 14200 and 14220 kHz, and from 2000z on 7075 kHz. Another trip to Yemen is scheduled for October. QSL via IK8JAF CBA.

SOUTH PACIFIC DXPEDITION. Ted, K8AQM, Jeff, N8CC, Brian, KG8CO, Kurt, KG8DS and Dave, KB8ECG, will be radio active from several Pacific locations for 1 month starting July 1. Though an all band effort, they will concentrate on 160 through 30 meters. RTTY is planned for KH8 and 5W during the North American RTTY QSO Party July 20 and 21. They will also be active in the IOTA Contest. QSL all calls to AA8HZ unless directed otherwise over the air. Here is their schedule. Majuro Island in the Marshall group, V73, July 1 to 4. Ponape Island in Micronesia, V63, July 4 to 7. Truk Island, also in Micronesia, V63, July 7, 8 and 9. Palau Island in Belau, KC6, July 10, 11 and 12. Japan, 7J3, July 13 to 17. Maui Island, Hawaii, KH6, July 17, 18 and 19. Ofu in American Samoa, KH8, July 19 to 24. Apia Island in Western Samoa, 5W, July 24 to 29.

WALES, GW. The WestNet DX group will be on from UT-124 during the IOTA Contest July 27 and 28. The call they will probably use is GW4VEQ.

THIS WEEKEND ON THE RADIO. ARRL Field Day hits the airwaves this weekend. See page 103 in May QST for complete rules. Info on the RSGB Summer 1.8 MHz CW Contest appears on page 99 in June QST. The World Wide South America CW Contest runs from 1200z Saturday to 1800z Sunday.

Gary Coffman <gary@ke4zv.atl.ga.us> wrote:

: If we accept Einstein's Special Relativity, we have to ask, "slowing
: down with respect to *what*?" The red shift is the same in every
: direction we look.

Picture a sphere full of bee-bees in zero gravity with an explosive force occuring at the center. All particles would be moving away from all other particles and yet the particle at the very center has not moved at all. Some particles are moving at a velocity greater than the speed of light relative to each other and therefore are invisible to each other. Only particles travelling at approximately the same velocity as we are are detectable by us. That's a relatively small sphere out of all of existence. The red shift is the same in every direction we look because we are trapped in the visual center of a tiny sphere somewhere within a colossal volume of space/mass/time.

If we could travel to the edge of the known universe, we would look behind us and find half the previous known universe had disappeared and a whole new half universe had opened up in front of us.

All the particles *that we are capable of detecting* are travelling away from us at less than light speed. They are located in the same local reality as we are so it "appears" that the red shift is the same in every direction. But that is true only in our local linear universe. What is the magnitude of the red shift for galaxies that are travelling away from us at a relative velocity greater than light speed?

Our local linear universe is like a square inch of real estate on the surface of the earth. That square inch appears so linear that we cannot detect the curvature of the earth, especially since the fractal math that Mother Nature uses hides a lot of clues.

It is no accident that the mass contained in the detectable universe appears not to be enough to cause a reversal of the expansion. There is an enormously greater amount of mass in existence than we are presently capable of detecting.

: If we're moving near lightspeed, that would imply
: that in *some* direction galaxies are moving faster than lightspeed

Let's assume that some galaxies are moving away from us at a relative velocity greater than lightspeed. They do not exist in our local linear universe although they exist in reality. They

are simply outside the radius of curvature of our universe. The ones at the very edge of our universe travelling at the speed of light relative to us may form a shell sphere of infinite mass around us keeping our very space from collapsing. We don't rush toward the infinite mass because we are already at the center of gravity of that infinite mass. Its location is relative to where we are located in the universe, and is responsible for all that empty space inside the atom.

: The standard expansion model
: explains the redshift though, so Occam's Razor says we should stick
: with that unless something which better describes the process comes
: along.

Hey, I just did describe it better and simpler. Galaxies are not getting farther apart faster and faster. They are getting farther apart slower and slower. Space between the galaxies is expanding, thus stretching the EM waves. In addition, seconds are getting shorter so we don't measure as many cycles per second. *I* used Occam's Razor and that's what I got.

How else to explain the measurements that some galaxies are older than the universe?

: The very heart of relativity is that all motions are
: relative to all other reference frames. There is no
: special frame we can call absolute.

Whadda mean we, white man? :-) The big bang must have had a center of gravity. Trouble is, it is probably outside of "our" local universe. But we already know from quantum physics that reality is *not* localized. It's easy to see why if 99.99% of the mass in the universe is moving at a relative velocity to us greater than the speed of light and thus invisible to us. Our reality is being projected from somewhere else. The logical conclusion is that it is being projected from the center of the big bang even though that "point" is outside the radius of curvature of our "universe".

Don't you see? If all we can detect is a small sphere out of a gigantic super-universe, then relative measurements are an absolute necessity because absolute measurements are presently impossible to make (but not impossible to conceptualize).

No, I understand very well what I'm saying. You're not reading what I
wrote.

The fact that the wave has a finite rise and fall time -- in fact, the fact
that the CW dot is finite at all -- means that you're not talking about one
frequency. (That is the poinst I was making in my first reply to you.)

>the interval during which power from the transmitter is radiated, and any
>deviation from a rectangular shape changes the amount of power radiated
>during that interval. It has nothing to do with what you're talking about
>above. But it does affect the total number of photons radiated during a

Yes, the first part is true. What *I* wrote is that as soon as you talk about a
finite-size box (of any shape) you're no longer talking about one frequency
component. You're talking about a wave packet (of some size) and your
frequency distrubition is no longer a Dirac delta-distribution in Fourier space.
Let me make it (I hope) clear. You look at the Power vs. frequency
distribution of your CW dit. It's not a single spike, it's a whole mess of
spikes. The distribution of spikes depends on the rectangle *you're*
talking about.

>dot since that is a function of the total energy radiated from the system
>in one dot duration. And that's still keying waveform duration times
>transmitter power during that interval. Energy = power * time

Yes, but you have to Fourier-analyze the power spectrum to get the number
of photons. So your forumula above should read:

/
| (Power in frequency mode n as a function of time) dt = Energy in mode n
/

# of photons of frequency n = (Energy in mode n) / (hbar * frequency n)

NOW for a rectangular pulse, the integral over t above can be replaced by
just (Power in frequency mode n) * (time of pulse).

>>Ahhh...here you go. Now you've got an infinitude of frequencies (and
>>therefore your energy reads E=sum_n (hbar * (# of photons in state n) * f_n)
>>The only time you can talk about a single-mode is when you've got a plane
>>wave going off to +/- infinity. (Well, you could also do it with periodic
>>boundary conditions, but those don't exist in our case.)
>Alas, you're still off in la-la land. The real sidebands, as I noted
>in the material you snipped, are a function of 1/risetime for the

>sidebands are at +/- 200 Hz from the carrier. If the carrier is at
>14 MHz, the energy spread for the photons emitted is 0.0028%. That

So what? Photons are for a specific frequency. That the spread is small is
immaterial.

>is a small enough error percentage to ignore under most circumstances,

You didn't say that above.

>but one further observation reduces it to zero. That observation
>is that the keying sidebands are *symmetrical* about the carrier.

So that means that there are exactly the same number of higher-energy
photons than lower-energy ones. They don't cancel.

>That means that for the total energy expressed in higher energy
>photons in the upper sideband there is a matching total energy
>represented by lower energy photon in the lower sideband.
>Since it takes fewer high energy photons to make a certain total
>energy than it takes low energy photons to make that same total
>energy, the net number of photons emitted in toto is the same as
>if they had all been of carrier energy.

I will have to "decode" this a little bit, but will concede that it seems
wrote to 0th order approximation. Hmmm. Right.

Let's assume we put out Ec Joules at the center frequency. Without loss of
generality, let's say we have only 2 sidebands, one at fc + delta and one
at fc - delta, each having Eside energy.

Total photons = Ec/(hbar f) + Eside / hbar *(1/(fc + delta) + (1/(fc -
delta))

You're claming that this is the same as (Ec + 2 Eside) / (hbar f). Please
correct me if I'm wrong. The math works out so that if delta = 0, the

results match. The fact that delta / f << 1 is really irrelevant, but so long as delta is not zero, you get:

Total photons = Ec/(hbar f) + 2 Eside / hbar * (f/(f^2 - delta ^2)).

Where did I got awry here? I will concede, it is a small correction, so that for all practical purposes your original formula is correct, but you play a little fast and loose with your physics there and you should make sure to specify what your assupmtions are.

I'm a pedant. So sue me.

>We do not care about antenna pattern shapes since what we want is the
[...]
I never mentioned antenna pattern shapes.

To: jcumming@clark.dgim.doc.ca
Subject: US OPERATION IN CANAD

JC>This does not apply to Canada at all. When an amateur operates in
>Canada, he operates in accordances with our regulations, not his home
>country. There is nothing in the Canadian regulations with respect to
>commonality of frequencies.

That's what I thought. I've gotten my reciprocal license in the
Philippines and there is no restriction on operating phone on phone
bands over there even if they're not allocated to US hams back home.

writes:

>When I show ham radio to kids I am positive about it.
>I let them come to their own conclusions.
>They like me fine if I do not push ham radio.

Then why was your own daughter bored with the hobby after
a short time? Was it her idea in the first place? Did she
come to you and ask if she could be a ham? Probably
not. If she was excited to get into it then she would have
stayed excited. My five year old boy has been sending CW
for a year now. He has been in about CW 50 QSOs with me as
the control operator. He doesn't have his own ticket because
he can't read well enough yet. But, he does know the basics of
what is involved in a QSO such as "my name is...", "your RST is..."
etc. The part of his copy that he can't read, I read to him.
The point is that he asked to be involved and he enjoys it.
I didn't say "Son, you are going to be a ham!" Did you do this
to your daughter just so you could show her off or show what a
great dad you are by getting your daughter on the air?
This concept is basic to parenting. It is even stated in the Bible.

Proverbs 22:6 Train {up a child} in the way he should go:
and when he is old, he will not depart from it.

A more literal translation of the Hebrew would be "Train up
a child in the way he is bent..." Referring to the way that a tree
branch or vine bends naturally. If he has a certain "knack" for
something then encourage him to persue it. If he doesn't,
don't force him to do it. You probably forced your daughter
to get her license even without really meaning to do so.
She probably went along with it to "please her father."
She then quickly got bored with it because she was never really
interested in it in the first place. So don't make a blanket statement
like "young people are disinterested in <place item here>" just
because your daughter is not interested. Nor does it mean that
you are a failure as a father so don't read that into my post. I have
introduced my son to many "hobbies" in which he had no interest.
I never forced him to do any of them. He loves Amateur Radio,
rock and bug collecting but he doesn't like Astronomy and he
doesn't like building model planes. I let him do the hobbies that
HE is interest in, after a proper review from me.

Kevin

Could it have been the company YOU keep Burt? Did you let
her "be a little girl" or did you force her into your world? I've
known fathers, and mothers, like that. Their children are put
into football, baseball, gymnastics, whatever not because they
want to be there but because their parents want them to be there.
Let your children grow up before you force them to grow up.

Kevin

Oh, there you go again - being nasty. Well, I must ask you this: Why did
you take my email response to you and post it? That wasn't very "grown up"
now, was it!

>2) You actually are this much of a jerk in person as well as on the internet.
>My question then is: Are you this way naturally, or do you have to practice.

Coming from you this means nothing. I recall how you attempted to belittle
MD's remarks by providing improper (wrong) dates regarding SSB and CW.

>Some facts found in a 10 minute scan of the 1977, 1989, 1995 ARRL Handbooks as
>well as "Now You're Talking" and the ARRL General Class License manual etc.
>etc. etc. I couldn't find my copy of "200 Meters and Down" Oh well.

Oh boy, a time line. Can I also add a few tidbits?

Primitive man starts grunting, thus providing a basis
for a spoken language. Pre-history

>SFB Morse (1791-1892) invents Morse Code. 1838

The telephone is invented 1879

>G. Marconi generates the first radio waves using 1895
>G. Marconi "Opens radio to the World" using spark gap Dec 1901
>Amplitude Modulation "invented" via mathematical ~1902
>DeForest invents the triode opens up practical 1906
>Fessenden connects a carbon microphone to a 1906 Christmas Day

Sidebands noted in AM variations 1914

Tests conducted at NAA proved existance of sidebands 1915

H.D. Arnold able to attenuate carrier and upper
sideband 1915

>First trans-Atlantic voice AM transmission via 1919

J.R. Carson at AT&T patented balance modulator 1923

Longwave (60kc) trans-Atlantic telephone service
using SSB 1926

>Sideband first used on trans-Atlantic voice 1927
>telephone circuits. Coincidentally, this

Robert Moore W6DEI and John Williams W2BFD place first
amateur SSB on the air (ARRL's SSB For The Rad. Am.) 1933

>First HAM or amatuer radio use of single sideband. 1947 (Sep. 21)
>Between W6QYT @ W6YX to W6VQD on 75m. This is why
>I recollected around 1950s. And even more so, the
>1950s was when widespread HAM use of SSB came about.

<ding ding ding> Sorry, you lose. You're 14 years too late.

>Amatuers around the world are still being tested for 1996
>licensure on Morse Code a coding system invented
>158 years ago from a man born more than 200 years
>ago. Some obstinate amatuers still doggedly argue
>the so called "merits" of such an unbelievable practice.

And verbal communication began in pre-history, yet we still use
it today. The telephone is almost 120 years old yet we still use it.

>The Morse Code requirements, this is not the same as CW, as tested by the 1X
>elements in the United States are testing a coding scheme, not a mode or
>modulation method, that is 158 YEARS old.

Yes, proven methods seem to stick around for ever, huh? BTW, testing
for knowledge of code didn't start until the late 20s.

>The point here is that it is not CW
>(a mode) that no-code testing advocates wish to remove, it is testing for Morse
>Code the 158 year old coding scheme that we are against.

And the tests are written in English which means one has to know a language
that is several hundred years old.

>Additionally, CW = continuous wave was used in 1906 using two distnct methods of
>generation; dynamo and triode amplification. While single sideband was first
>used, by your own admission in the 1926 - 1927 time frame.

Make that 1915. See above. A 9 year difference. So we see MD was correct.
Don't be a sore loser, Jimmer.

>The time elapsed is 20 years. That is TWENTY YEARS BETWEEN FIRST USE OF CW AND

>FIRST USE OF SIDEBAND.

No no no - 9 years, Jimster. Twice in 2 days you've lost all credibility.

>P.P.S. you are going in my kill file. And please do forge the header info to
>soemthing like the last time, what was it Iminyourkillfile? The more data
>points I have, the better.

What a spoil sport. He knew he was wrong and rather than reading another
correction from me he quits. Phooey.

Hello Hams and AmRadio Buffs!

I'm a license plate collector, and as always, I'm looking to add some plates to my collection. If you have a plate (or plates) that are just lying around, drop me a line! I'll probably buy it!

I have a pretty good collection going, and some can be seen on my license plate collectors site - http://users.aol.com/PL8Seditor/queen-b.htm

Hope I hear from you!

(by the way, all butt-kissing aside, many thanks to all the ham operators who have helped me out with my hobby in the past - you guys (and girls) have been really decent and helpful, and it IS appreciated. - Drewski)

>positive net margin!

>Regards, Dan AA3LS

Dan, very nice explanation. Obviously the original poster who was
complaining about RS's gross doesn't know much about business.
There was another thread complaining about the lack of local amateur
radio stores. Higher required gross is one reason the local stores
may have gone away, but I think the main reason they have is because
hams are cheap. When someone needs a radio, they get out the
800 list and start calling. They find the radio for 10 bucks less via

mail order than in their local store, so they order it mail order.
The personalized service, the fact that problems could be solved in
the store, and supporting the local business are not worth 10 bucks
to most hams. So the stores go away.

Jim, calm down. Look at the subject of this message. It's not 'KICK
MD's BUTT'. Mike is a really nice guy. It's just the fumes from all
that Tomato Sauce make him do some really wierd stuff. And if
you think about it, both of the above statements are 100% true.
Mike's very honest:

"Who needs looks when you've got taste ?"

He admits, right here in front of God and the internet how ugly he
is. But that's not his fault, he was born that way. He's just honest.

"If you don't like my opinions, that's just too damn bad."

You mentioned internet standards. If that isn't *THE* internet
standard, I don't know what is. So give Mike a break. He had
a hard day at the factory, jumping up and down in that big
barrel smashing all those tomatoes with his bare feet. Let's
get back to the original subject of this thread, I'm just *dying* to
read some more good 2m/70cm related to CW stuff. I just
can't get enuff of this kinda stuff.

I have an Alinco DJ160T that has a problem I hope someone can help me with.
Whenever I program something into memory(frequency,etc.) and shut the unit off for about 5 mins. then turn the unit on APO is displayed on the LCD and I've lost the memory contents. The only way to get the APO off is to reset the radio back to it's defaults.
By the way the, APO function is the auto power off function if you forget to turn the unit off after 30 mins.
The radio seems to work otherwise fine as long as you keep it on.
Is there an internal battery that retains the memory?

Any ideas out there?

I wasn't implying that you were making it up, sorry if it was taken as such. I do find it interesting that the RS tech that repaired your rig replaced the RF board assembly and mine was repaired by replacing several components. I don't have the invoice in front of me, but it was about $15.00 worth of parts. Granted, there may be good reason for the difference, but... I wonder if the experience level of their repair techs varies so greatly that some are simply "board swappers"? Reminds me of the field service that most computer companies supply. These guys just swap boards in our system as instructed. They used to call them "Field Engineer" or the like, now they are called "Field Service". Notice the lack of "Engineer" in the job description.

My main point is that you, "Mr Customer", pay for their lack of experience in the form of higher repair costs. This isn't just Radio Shack that operates this way. I can tell you some interesting things about our experience with former Malcolm Baldridge Award winner, Motorola and their service group.

In defense of Radio Shack, I own two HTX-202s, HTX-100 and HTX-212. All have performed well, except for the finals on one of the 202s.

Inflated prices?

I have seen nice, new, small HTs from Alinco selling for $179.
Seems they are a better value than the RS HTs. They also seem to
be less problematic. Plus, they have more features than just the
basics. You can also get a load of accessories. RS offers almost
nothing in the way of accessories. How about a rapid changer?

>nothing but a burden. But if you're into designing and building stuff
>(which are the roots of Ham), CW is a great entry point.

Yep, I've been saying that for quite a while. If we're supposed to be a technically competent service, promoting modes that simplify understanding of basic radio concepts can only help us. Being elitist, and shunning code for computers, will turn us into an appliance operator service.

>Does CW really discourage the technically interested/inclined?

Good question. I don't know the answer, but I can say that the majority of hams I know who are technically inclined (into homebrew on everything from HF up to 10 GHz) have no problem with code. I don't think most of them really thought twice about it... if you wanted the privileges, you learned the code. Idealogical arguments are all very well, but at some point you have to be practical if you ever want to get anywhere, and these folks wanted to.

Standard Code Wars disclaimer: None of this has anything to do with code testing. I think we should think about whether government still has any need to test amateur licensees for code proficiency. That's the bottom line reason why we get tested for anything at all. I agree that there's pretty much nothing else keeping HF from become one vast CBer wasteland at this time, but we can eliminate memorization from the theory tests to change that.

Obviously, more and more amateurs are using digital modes. I have noticed
many complaints these days of those who are devoted entirely to OOK Morse
code communications of the incursion of digital signals into spectrum that
was once considered sacrosanct preserves of CW. Little do they realize that
more and more amateurs are using digital modes resulting in greater demands
for more spectrum.

>
> The total space available in the HF bands is very small. Having lots of people using
> it WITHOUT the ability to use such a narrow band mode as Morse would create
> much more congestion than if they were to use Morse.
>

Indeed, there is a replacement for OOK Morse communications - Baudot, the TOR
codes and Clover come to mind. Aside from the fact that theses modes have
greater throughput, some of them also get through when Morse code will fail.

Regretably, this comparison of the necessary bandwidth for Morse code and SSB
communications is a narrow (no pun intended) view of the overall merits of
the two emissions. For the most part, it is like trying to compare apples
and oranges.

> Without a Morse requirement and congestion on the voice bands, how long would
> the CW reserves remain just for CW (I already hear a number of SSBers operating
> on the CW realms)?
>

As I had mentioned earlier, they are already getting progressively smaller as
more amateurs are using modern communications techniques.

> A couple of people suggested that the proposed HF no-coders would learn Morse
> once they encountered the congestion. Of this I am skeptical, for if they won't
> learn Morse in order to gain access in the first place, I cannot believe they'll learn
> it in order to reduce congestion.
>

I join in Broadbent's skepticism because I too feel that if the spectrum
becomes too congested, it is unlikely that they will turn to Morse code. I
believe that those who are dissatisfied with SSB due to overcrowdingwill do
one of two things - develop an even more efficient radiotelephone technology
(perhaps Spread Spectrum implementation), or will look to the digital modes.
Considering the ineffeciciency of Morse code, there would be few that would
wish to devote the time and effort to learning that mode as a solution to
the overcrowding of the radiotelephone bands.

With that in mind, since Morse code is anachronistic, why should the
government continue to demand that amateurs learn the Morse code (current
international requirements aside)? Quite frankly, governments couldn't care
less what mode amateurs use. Even in the U.S. where sub-allocation is
mandated by law, there is no requirement for an individual to use Morse code
after having passed the test in order to gain access to HF operation. Since
governments don't care one way or the other which mode amateurs use,
Broadbent points out the real dicotomy of Morse code testing in amateur radio
testing. That dicotomy is that Morse code testing is the means by which
access to the radiotelephone bands is restricted, otherwise they would be too
crowded.

The prevention of overcrowding did not work then when it was attempted fifty
years ago, and it is unlikely to have much more success in the future. In
the past, amateurs got around the overcrowding problem by using SSB, better
filtering and the like. Attempting to prevent overcrowding would have the
negative impact of stifling creativity - if there is no overcrowding, what is
the incentive to investigate more spectrally efficient techniques, whether
phone or data?

> Others have spoken of the spectral efficiency, data throughput, etc. This all
> assumes that maximum throughput per channel is what is important. I don't
> believe this is so. It is (IMO) number of people per band that is more important.
> Besides, what is the spectral efficiency of a voice channel that consumes 3KHz
> (ideally)?
>

This assumes that we amateurs have reached the pinnacle of spectrum
efficiency where 3 kHz is the minimal limit for radio communications.
Besides, considering that English is spoken at a rate of 120 to 150 words per

minute, then the same amount of spectrum would be required for ten 300 Hz channels at 15 words per minute. So how indeed is Morse code more efficient than radio telephone under those circumstances.

> Why would anyone care if someone cannot saturate their 300Hz slice with maximum
> data throughput because they can work at only 5 WPM Morse? Are they to have
> time limits imposed, forcing them to speed? Is everyone to use some digital mode,
> and in order to maintain maximum data throughput on the "channel", everyone
> is to be connected to concentrators? Of course not.

I agree with Broadbent's view, there is no justification for dictating which mode must be used, they are all optional. Therefore, since the use of Morse code is optional, then it does not follow that it knowledge should be mandatory.

>
> Spectral efficiency, Shannon, Nyquist, sampling and signal theory aside, ten CW
> operators could fit into the space of one phone operator. On HW, this is, I believe,
> important.

But if all these other factors are brushed aside, then conclusions reached will be false. It would be like ignoring all other factors and deciding upon the purchase of a car based on the location of the muffler.

> being stopped from studying it, any more than the Morse proponents.
>

In fact, the technical testing is important because of the government's legitimate interest in ensure that amateurs do not interfere with other users of the radio spectrum. Whether the individual wishes to use a home brew rig or a commercially available radio has no bearing. The bottom line is to ensure that the amateur is competent enough to stay out of trouble.

> For those unable to read between the lines, I oppose this viewpoint. In fact, I
> believe the tech components should be strengthened. I haven't written a Ham
> exam yet, so no-one can accuse me of trying to create an exclusive club of which
> I just happen to be a member.
>

If few sources of the sources of interference originate from amateur stations, then advocating increased technical requirements is questionable. If amateurs are causing interference, then it is justifiable; otherwise it would be an unjustifiable barrier.

> I'm spending more time on these posts than I spend on a nightly Morse drill. Morse
> really is not hard. It requires a little time, perseverence and the right attitude.
> Get a Morse code practicer (better yet, build one) or write a Morse code program.
> It'll broaden the mind.

I disagree with Broadbent. When one hears "didah", one immediately writes
the letter "A". There is no broadening effect upon the mind.

>It is quite fun.

No doubt that to Broadbent, Morse code is fun. But he is not in a position
to project his views upon all his other fellow human beings.

>The difficulty is not worth all this fuss.
>

More to the point, advocating mandatory Morse code testing isn't worth the
fuss.

```
V 0.5 Beta - Release Notes
==========================

21 June, 1996

Problems installing RadCad-Lite
-------------------------------

Some users have reported problems with Setup.exe.

On running Setup.exe, a message is displayed say
'Cannot copy VBRUN300.DLL'. This occurs when there
is already a copy of VBRUN300.DLL in the
WINDOW\SYSTEM directory. The fault would appear to
lie with Setup.exe, supplied by MicroSoft as part
of the Visual Basic 3.0 setup kit. Setup.exe is
supposed to install VBRUN300.DLL included with
RadCad-Lite, provided the copy of VBRUN300.DLL on
the target system is older than the version about
to be installed. This is not happening.

If you are experiencing the above problem then we
suggest you rename your current version of VBRUN300.DLL
and then run Setup.exe again. Check that any other
applications that require VBRUN300 run correctly.

We are working on this problem and will post an
advisory note to usenet.

The version data for the version of VBRUN300.DLL
included with RadCad-Lite is:

Size: 394,384 bytes
Date: 28 March, 1993

>requires expensive coordination.

I will admit that I don't have much experience with GMRS - but that is
because, the way the rules are written, I never thought it would suit my
needs.

Rules like 95.1... "The GMRS is land mobile radio service available to
persons for shorth-distance two-way communications to facilitate the
activities of licensees and their immediate family members..."

..and 95.71(e)..."A non-idividual may not obtain a new GMRS system
license..." As mentioned before, there are non-idividuals that currently
have GMRS licenses. However many of those licenses are apparently not

renewable now.

I would like to know more about the steering committee. I have heard they are online someplace...but I have yet to find them.

You do not have to be "incorporated" to get a license in the Private Land Mobile Service - Part 90 ("business, etc"). And the using intinerant channels often takes little coordination - sometimes virtually no coordination at all.

>I filed mine about the same time; haven't heard back yet.

Hi Roger, someone said the FCC got 350 applications the first day and they processed 5. Yours and mine are probably far behind those 350 which, at the same rate, will be finished a little more than 2 months from now. Don't expect too much from an organization that took 2 years to release the application form?

>up, I'll have to do some serious prospecting on a more suitable apartment.

As Carlton Sheets would say, "Why pay the other fellow's mortgage?"
Forget apartments, buy a house. It has tax advantages, it builds
equity, and if you work the deal right you can put cash in your pocket
at the closing. But most important from an amateur point of view, you
can put up good antennas.

If you're really slick, you'll buy an apartment building. Then you can
put up whatever antennas you want, and your other tenants pay the mortgage.
In fact, talk to the owner of your current apartment building. You might
not even have to move.

3976. ANNOUNCE: Comprehensive Global MUF Predictions Database

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-20 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <4qc196$nba@holly.cc.uleth.ca>
Source record: 222583
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave

COMPREHENSIVE GLOBAL MAXIMUM USABLE FREQUENCY PREDICTIONS

The Solar Terrestrial Dispatch (STD) recently generated a large database of predicted Maximum Usable Frequencies (MUFs) and related parameters from 13 June to 01 August 1996. The database consists of results determined through numerical ionospheric ray-tracing techniques and is (to our knowledge) the most comprehensive database of predicted MUFs in the world.

Over 845,000 MUF-related parameters were computed using a high-speed DEC OSF-based computer system. Over 330 hours of continuous CPU time were required to generate these rigorously ray-traced MUF results. Equivalent computations on the fastest Pentium would have required close to a month of continuous calculations. The database covers 13 date intervals and includes the following MUF related statistics:

* Predicted 24-Hour Maximum Usable Frequency for the F2-layer.
* Predicted 24-Hour E-Layer Maximum Usable Frequency.
* Predicted Frequency of Optimum Transmission (FOT).
* The 24-Hour Average F2 and E-Layer MUF (a secondary FOT value).
* The 24-hour angle of elevation transmitters should use to reach the targetted receiver at the predicted MUF.

Each of these parameters include predicted effects of geomagnetic and solar activity.

The database provides sufficient information to let you easily determine what times of day, frequencies and transmission elevation angles to use to reach regions around the world. It also tells you whether your signal is going to be dominated by E-layer reflections, F-layer reflections or whether it will penetrate the ionosphere entirely and be lost to space. It is ideal for signal planning or for anyone interested in determining predicted optimum transmission or reception frequencies.

A simple but effective computer program lets you graphically select the desired transmitter and receiver with your computers mouse. After you specify the date interval for the prediction, it retrieves the appropriate predicted information from the database and graphically displays the results on your computer screen. The software requires an IBM or compatible computer system with VGA graphics and at least 200K of free conventional memory. With the database and software combined, about 7.5 MB of free hard-disk space will be consumed. The software is a DOS based application but WILL run under Windows 3.1 or Windows 95.

The available transmitters and receivers for the current prediction database are listed below:

British Columbia, Alberta, Saskatchewan, Manitoba, Western Ontario, Eastern Ontario, Western Quebec, Eastern Quebec, Labrador, Newfoundland, Nova Scotia, Alaska, Northwest U.S. Coast, Southwest U.S. Coast, Northwest U.S., Westcentral U.S., Southwest U.S., Northcentral U.S., Central U.S., Southcentral U.S., Northeast U.S., Eastcentral U.S., Southeast U.S., Northeast U.S. Coast, Eastcentral U.S. Coast, Southeast U.S. Coast, Mexico, Spain, United Kingdom, France, Northcentral Europe, Southcentral Europe, Northeast Europe, Eastcentral Europe, Southeast Europe, Norway, Finland, Israel, Japan, Southeastern Australia, New Zealand, and Hawaii.

You can determine predictions using any of the above locations as either transmitters or receivers. We will be adding several other locations in future databases, including regions of Africa and South America.

We will be updating this prediction database regularly (monthly to bi-monthly) and will provide it only through the Internet via FTP or WWW.

To obtain the database and/or software, print out, fill out and postal mail or FAX the following form to us:

>Physicist, homebrewer, PP-ASEL, KE6JTN

I never said it was not a worthy suggestion. All suggestions are worth looking at. My opinion is that the requirements of ham radio probably don't make it as practical as some other radio services for the person who aske the original question. You eventually have to decide which of your ideas will suit your needs. I would "hate give thumbs down to this idea" but I would if some better ones were proposed. I don't think it would be tough to find some better suggestions in THIS example.

Ham radio might suit the needs of a neighborhood watch group - if the individuals in the group were interested in becoming hams.

As for nets... weekly (daily, monthly, whatever) nets are generally conducted to pass on information to groups of amateurs. The content of most nets is of interest and use to amateurs. They are not usually considered "communications, on a regular basis, which could reasonably be furnished alternatively through other radio services", where neighborhood watch opertions could be.

Nets are also used for emergency training. You check-in, you pass traffic, etc. And the reason hams are allowed to provide communications assistance at events like parades is for the training value.

One of my favorite "training events" where I used to live was a once a year neighborhood watch type event on Halloween. A group of us from the the local club would work with the police department to provide "additional eyes" in the residential neighborhoods during the trick-or treat hours. We patrolled in cars for about 3 to 4 hours, in assigned areas, and kept in touch with OUR net control who was set up at the police station.

This was excellent training. Passing messages, keeping track of operator whereabouts, getting emergency traffic to local authorities, etc. But no

one became an amateur in our town just to do that - I don't think. And we didn't do it every night. It was a training opportunity, not a regular job.

Curtis

==========comments GM0CSZ / KN6WH
Chris ,I agree that CW operation enables operators to use relatively
simple equipment which can be homebrewed. I don't think that CW
lovers are more or less technically inclined than others. As it comes
over to me ,the whole CW requirement dialogue centers around that ,
when the morse test requirement would be dropped :
1) CW operators fear that the HF bands will be overcrowded in general
and that this overcrowding will result in the CW segments being squeezed.

2) Quite a number of HF operators resent that with a no code licence
for the HF bands ,the new generation of HF operators would get it 'for free'
I call this the 'jalousy factor'
However I agree that with a little effort anybody can learn morse code.

Inspite of being very much pro CW incl. QRP operation , I feel that with the abandonment of manual morse telegraphy by most if not all of the non amateur users of the HF spectrum , morse code should no longer be a requirement for hams to use the HF bands ......the world is moving on .

>How much current is flowing in this resistor? ____C___________

A. (120 - 12) amps

B. (120/12) amps

C. (12/120) amps

D. (120*12) amps

This would demonstrate to my satisfaction that the testee knows how to
calculate the current flowing through the circuit, and this would be an
acceptable multiple choice answer/distractor set.

Multiple choice is a fact of life, and has been shown to be an effective
way of measuring a person's knowledge. It's effectiveness is dependent
upon the wording of the question however. I think the VEC's have overall,
done a great job at formulating the exams, and are continually striving for
improvement.

If the question pools "cause" memorization, then lets provide some
questions worth memorizing. Personally I must confess to having
memorized ohms law many years prior to taking my ham exams. So what if
people memorize V=I*R and XsubL=2Pi fL for their ham exams?

The only concern I can foresee with these types of questions would be
from those who are concerned that hams would no longer be required to
demonstrate their ability to use a calculator. A minor point, but not an
insurmountable problem either.

Since the packet folks seem to have taken over the 222 Mhz FM simplex
frequencies, I can't much sympathize with them if the find an occasional
voice station on 2 meters.
The band plan becomes more cofusing each year and certainly more regional.
I think we need to set up some independent regional groups and coordinators.
The local coordinator around here approved another repeater on 224.92 Mhz
that is about 3 miles from an existing repeater on 224.94 Mhz. Both repeaters
have suffered from input splatter. What kind of 'coordination' is this?
The 'calling' frequencies are another example of practical use vs. documented.
I read in a recent QST that the editor of the ARRL repeater guide described
146.52 as a 'calling frequency'. I haven't looked in a new guide but 146.52
has been described as the 'national simplex' frequency in the older books
while something for DX like 144.200 is described as a 'calling frequency'.
This will undoubtably lead to attempts at enforcement that degrade amateur
radio, IMHO.

I listen to 146.52 a lot and have had some great chats on it. Same goes
for 223.50 and 52.525 as well as 29.600 Mhz. Why call an FM channel a
calling frequency? How can you find anybody to talk to if nobody is there?

I find that 6 Meter AM is asking for it from the non-techno neighbors.
If any power at all is used, they can recognise my voice from the
audio rectification that always seems to go with 50 MHz operation.

On SSB or CW, direct voice identification is lots harder.

Cheers,

Mike Valentine - WA8MSF 6 meter kilowatt since 1966.

Just a simple response to the inquiry concerning the use of designated packet frequencies. I use packet quite extensively and found it rather annoying to be interrupted by what the constant carrier of a voice transmitted signal. When a constant carrier is present on the packet frequency, all packet transmissions are ineffective. Thanks for staying on 146.52

> Then you are most certainly installing it incorrectly.
>
> Dean
> N7ZRS

Hello, Dean. You'll need to go into a lot of detail to explain
how to install connectors on 9913 "correctly".

Jim is only one among a large number of hams that have seen problems
weather-proofing 9913. In long runs, it may well be impossible. It
seems that the connector has to have nearly hermetic qualities to
prevent water ingestion due to osmotic pumping of humidity into
the central air-cavity of the cable.

The major problem seems to be around the jacket-to-shell mating
surfaces. I have had some success using flooded-joint heat-shrink
(underground cable TV style) around the entire connector, cable shank,
and whatever it connects to (other cable, antenna connection, etc).

My opinion (and I can put on K-connectors @ 40 GHz that sweep well), is
that only foam-core low-loss coax should be used out-of-doors. Belden
9914 is a good idea as well as Times LMR-400, LMR-600, etc.. I use
Andrews 1/2" Superflex for jumpers on my VHF/UHF SSB/CW system.

Belden 9913 is really an RG-8 sized version of air dielectric Heliax.
Air (with spiral centering insulator)dielectric Heliax is ALWAYS used
with a refrigerating dryer or low-pressure dry-gas purging on any
out-of-doors run, otherwise it fills up with condesation. I have not
seen refrigerated dryers for 9913 on the market.

There are many, many stories about how somebody's 9913 run had all of a sudden developed a high SWR. One such person took the cable into work and put it on a time-domain reflectometer to look for a fault. When he located the point a the bottom of a loop, he drilled a small hole into the cable to see what it was. The high-SWR then "ran out onto the floor". The cable then tested OK. It happens all the time.

Cordially,

Mike Valentine - WA8MSF

My $.02 on the vanity-call program.....

I sent my 610V with the $30 to the Mellon Bank address for the FCC in Pittsburgh on 30 May. It arrived there 11am ET on 31 May. On 7 June my old (now current) call was issued according to the call sign database UA-Little Rock maintains. A week later, the paper with that call arrived. Not too bad, compared to the past and many weeks or months of waiting for FCC. Admittedly, I used overnight delivery to ensure arrival (and timely arrival at that). But, it is done.

Now that my record has my first ham call as my current call, there doesn't seem to be any special indicator on the online databases or on the printed licence I received from Gettysburg that indicated this was a result of the vanity-call program. I wonder if there will be a fee to renew this call, or if the fee is a one-time shot.

: Thanks to all who replied! Its good to know that is hope at 100 watts.
<snip>

In case noone else has mentioned it, DO NOT ATTEMPT TO IMPROVE YOUR
RESULTS BY GETTING AN AMPLIFIER!. Putting 100 Watts into the antenna
you describe is risky enough. More power might endanger your health,
or start a fire somewhere that you won't see it for a while.

Sounds like the line filter on the internal switching supply is insufficient
or non-existant. You might try an outboard one, or if the radio has an IEC
power connector, perhaps replacing it with one that includes an integral RFI
filter. Corcom makes these and they're available from DigiKey.

At the top of the eiffel tower on my recent paris trip, i had the opportunity to check some lightening protection....They have a number of long pipes with copper spikes at the end mounted 2 per side on each of the 4 sides of the tower at the observation deck at abt 950'. this is abt 100' below the top of the radio antennas at the top of the tower. these spikes are obviously current discharges spikes similar to those used on commericial radio towers. Incidentally, the official history of the tower says that the french army used it in ww1 for communications, and that "radio saved the tower".

oh, yes, i almost forgot...the view from the top of the tower is pretty nice...

Well Jeffy,

I call you Jeffy in this post since you seem to delight in the childish. Does
that pat on the head feel good now?

One observation:

There are many decaffienated brands available on the market that taste just as
good as regular. You should try them.

Now the following facts that you seem to delight in ignoring in your inane attempt to irritate. Not to mention what you twist and misrepresent in your ever present pursuit of being what ever you are. I can think of two situations:

1) You enjoy being abrasive just to rile people up. In this case well, we all have seen you and your infantile manners. Please, we are all grown-ups here; if you still feel the need to be the center of attention, I'm sure there are many different avenues available right in Hawaii (or is it Guam?) that will be much more satisfying. Some may even get you on the evening news.

2) You actually are this much of a jerk in person as well as on the internet. My question then is: Are you this way naturally, or do you have to practice.

Some facts found in a 10 minute scan of the 1977, 1989, 1995 ARRL Handbooks as well as "Now You're Talking" and the ARRL General Class License manual etc. etc. etc. I couldn't find my copy of "200 Meters and Down" Oh well.

SFB Morse (1791-1892) invents Morse Code. 1838
Later it is modified to resemble todays
Intl. Morse Code, sans prosigns, with help from
Alfred Vail from the original fixed length version.

Time elapsed = 57 years!

G. Marconi generates the first radio waves using 1895
spark gap.

Time elapsed = 6 yesrs

G. Marconi "Opens radio to the World" using spark gap Dec 1901
transmission of Morse Code across the Atlantic.

Time elapsed = ~1 yesr

Amplitude Modulation "invented" via mathematical ~1902
principles.

Time elapsed = 4 years

DeForest invents the triode opens up practical 1906
methods for amplification and therefore CW meaning
continuous waves not Morse Code in that they are
not damped waves as produced by the spark gap.

Fessenden connects a carbon microphone to a 1906 Christmas Day
dynamo and produces the first voice broadcasts.
These were also continuous waves as opposed to
damped waves via spark gap. Albeit a clumsy way
to produce radio frequencies still was cont. wave.

Time elapsed = 13 years

First trans-Atlantic voice AM transmission via 1919
Marconi stations Ballybunion, Ireland, to the
receiving station at Louisbourg.

Time elapsed = 8 years

Sideband first used on trans-Atlantic voice 1927
telephone circuits. Coincidentally, this
the first trans-Atlantic radiotelephone service
also. 150 - 200 kW, 3 min call = $75.

Time elapsed = 20 years

First HAM or amatuer radio use of single sideband. 1947 (Sep. 21)
Between W6QYT @ W6YX to W6VQD on 75m. This is why
I recollected around 1950s. And even more so, the
1950s was when widespread HAM use of SSB came about.

Time elapsed = 49 years

Amatuers around the world are still being tested for 1996
licensure on Morse Code a coding system invented
158 years ago from a man born more than 200 years
ago. Some obstinate amatuers still doggedly argue
the so called "merits" of such an unbelievable practice.

So once again Jeffy, since you don't seem to be able to stick to the point.

The Morse Code requirements, this is not the same as CW, as tested by the 1X elements in the United States are testing a coding scheme, not a mode or modulation method, that is 158 YEARS old. The point here is that it is not CW (a mode) that no-code testing advocates wish to remove, it is testing for Morse Code the 158 year old coding scheme that we are against.

Additionally, CW = continuous wave was used in 1906 using two distnct methods of generation; dynamo and triode amplification. While single sideband was first used, by your own admission in the 1926 - 1927 time frame.

The time elapsed is 20 years. That is TWENTY YEARS BETWEEN FIRST USE OF CW AND FIRST USE OF SIDEBAND.

Now out in Hawaii (Guam?) I've heard from you that 30 yrs is not considered in the "ballpark" so I must assume that 20 years could not be in any way considered "almost exactly the same time".

Well now Jeffy you simply stated earlier that I had no credibility. Simply stating so does not make it any more true than you come across the internet as a nice person. But the question now runs begging:

What is your credibility given that you consider 20 years to be "almost exactly the same time" while 30 years is not in the ballpark? For me it is close to zero when taken with the other posts from you that I have had the displeasure of reading.

Now please to not bore us with more of your... um, "analogies" about spoken language being thousands of years old or of the telephone being almost as old as Morse Code. They are not the same nor are they even able to be stretched for teh purpose of an analogy. Quickly, spoken language is something that is innate in human beings and is naturally present. Children isolated by themselves will

develop spoken language all on their own. It is naturally present in our genetic makeup. Morse Code is not. The analogy with telephone fails since the telephone system is analogous to radio itself since they are both the medium of transmission in their respective domains. Within this "analogy" Morse Code would still be equivalent to speech. Besides, all my phones are digital.

Later, bye, ciao, k-den, whatever,

Jim

P.S. Please let MD rebut his own arguements, at least he is somewhat good at it if not for the entertainment value. You are simply bad at it and are boring.

P.P.S. you are going in my kill file. And please do forge the header info to soemthing like the last time, what was it Iminyourkillfile? The more data points I have, the better.

3999. LINKS TO ALL MEMBERS OF CONGRESS & WRC-97 & ARRL BAND THREAT PAGE

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-20 00:00:00 UTC
From: wb6siv@cyberg8t.com

I have generated links at (http://www.sarrio.com) to all members of Congress that have e-mail addresses, and also to the WRC-97 mailbox, and the significant ARRL page that deals with the band take over issue.

I know there is a great deal of controversy concerning the best approach to take in fighting the LEO attempted take over of 2m and 440MHz. I am not saying that e-mailing to your Congressional Rep. or US Senator is the most effective approach. I do not know and can only guess at what method will work most effectively. I do believe that to DO NOTHING will definitly lead to significant freq. losses in the long run.

I offer a complete list of Senatorial and Congressional e-mail links to those who believe this is (will be) an effective approach to stopping this takeover effort.

I would suggest,however,that if you e-mail Congress, that you limit your e-mails to only your own district representative or state senator. Include your name and address, this will inform your representative that you are one of his/her constituent and he/she will be far more likely to seriously consider your letter. Also try to be civil and informative in your message, remember we need their support.

I have also added some letter writting matterial for those who find it difficult to put your ideas down into words. Feel free to use what you want, it's there for your use in the letter writing campaign.

>tests other than code). I fail to see why this is so "transparently
>fallacious".

It is fallacious because your conclusion does not logically follow
your initial premise.

You said:
If code requirement is dropped for HF access, then all hams will
be no code and have access to the HF bands. That is false for the
following reasons:

1. It assumes that because someone did not pass a CW test, that
they will not voluntarily chose to learn and use CW on their own.

2. While elimination of CW testing would immediately allow no-code
techs access to some HF, that access would be limited to the novice
subbands only unless a change in privaledges beyond the elimination of
the CW test was done (i.e. To operate on most amateur HF spectrum
would still require the no-code tech to upgrade to general.)

Warren,

My infomation is a couple of years old, so you may want to check with ARRL for an update (they'll send you the info, or you may be able to get it via e-mail ... check http://www.arrl.org)

I was in Mexico a few months ago, but didn't take a rig or try to operate that time.

When I was there for over 1-1/2 years (cruising in a sailboat), you HAD TO get a Mexican licence (show your US license, ANY class, and pay the fees) and you got full priveleges ... even techs and novices.

At that time, the bands were open ... any mode, anywhere, as long as you stayed within the bands.

Your Mexican callsign would be issued as XEn + your US callsign ... mine was therefore XE2WA6VSE (I got my license in the 2nd Mexican call district.)

Operating in Mexico was fun and the Mexican hams were VERY friendly and cordial.

Please do check with ARRL for the latest, because there was talk of automatic reciprocity, but I don't know if it's taken place or not.

DO NOT operate in Mexico without proper licensing ... it's a good way to lose your gear and Mexican jails are notoriously nasty places. It's their country ... follow their rules and you'll be fine and have fun.

Good luck,
Carl - WA6VSE

Yes, I've gotten a tremendous amount of e-mail (30!) on this and all agree
that 100 watts is sufficient. All replies have focused on my antenna ...
or lack of an adequate antenna.

Thanks to all who replied! Its good to know that is hope at 100 watts.

I'll have to work in this, as it is quit hard being on the first floor
and surrounded by neighbors on all sides and above. When my lease is
up, I'll have to do some serious prospecting on a more suitable apartment.

Do you know that you can get full cell coverage scanners from Canada. Last week I went to my local store (Durham Radio) and they have all kinds of goodies.

They still have the Radio Shack PRO-43's, as well as current models of AOR and Yupiteru (I think that's the way they spell it). All with full cell coverage.

They've got a cool looking web site too. Their scanner page is http://www.durhamradio.ca/scanners.htm

I found them when looking for Ramsey kits. I run a pirate radio page and have a lot of people asking about the Ramsey transmitters.

If you are interested in pirate radio please visit my page at http://206.130.20.1:80/~glen/

>

I could have been clearer here. My emphasis was on the bandwidth that would be taken by those who would use phone because they could not use Morse. Perhaps they could use RTTY, but how many would (this isn't rhetorical, I have no idea)?

The total space available in the HF bands is very small. Having lots of people using it WITHOUT the ability to use such a narrow band mode as Morse would create much more congestion than if they were to use Morse.

Without a Morse requirement and congestion on the voice bands, how long would the CW reserves remain just for CW (I already hear a number of SSBers operating on the CW realms)?

A couple of people suggested that the proposed HF no-coders would learn Morse once they encountered the congestion. Of this I am skeptical, for if they won't learn Morse in order to gain access in the first place, I cannot believe they'll learn it in order to reduce congestion.

Others have spoken of the spectral efficiency, data throughput, etc. This all assumes that maximum throughput per channel is what is important. I don't believe this is so. It is (IMO) number of people per band that is more important. Besides, what is the spectral efficiency of a voice channel that consumes 3KHz (ideally)?

Why would anyone care if someone cannot saturate their 300Hz slice with maximum data throughput because they can work at only 5 WPM Morse? Are they to have time limits imposed, forcing them to speed? Is everyone to use some digital mode, and in order to maintain maximum data throughput on the "channel", everyone is to be connected to concentrators? Of course not.

Spectral efficiency, Shannon, Nyquist, sampling and signal theory aside, ten CW operators could fit into the space of one phone operator. On HW, this is, I believe, important.

A rhetorical question to those who say they wouldn't use Morse, thus it's a waste of time. I suppose the same argument can be used for the technical component of the Ham tests with most people these days. They buy their equipment, so why should they have to learn Ohm's law and all that other "technical" stuff? After all, they aren't going to use it. Heck, Radio Shack has radios and antennae off the shelf. People are so busy, why should they have to study the tech stuff? Their free time is their most valuable time. If they want to build a radio, they're not being stopped from studying it, any more than the Morse proponents.

For those unable to read between the lines, I oppose this viewpoint. In fact, I believe the tech components should be strengthened. I haven't written a Ham exam yet, so no-one can accuse me of trying to create an exclusive club of which I just happen to be a member.

I'm spending more time on these posts than I spend on a nightly Morse drill. Morse really is not hard. It requires a little time, perseverence and the right attitude. Get a Morse code practicer (better yet, build one) or write a Morse code program. It'll broaden the mind. It is quite fun. The difficulty is not worth all this fuss.

Cheers,

Chris

(much snipping)

I am a no code tech. I am annoyed by the fact that hams accuse no code techs for the future elimination of cw. I personally dont want to learn cw. I dont want to be on the hf bands. I use packet and internet phone to communicate with hams all over the world. We are at a record low sunspot now and dx is hard. One thing that you should realize is that it is not the no code techs but the radio manufacturers lobbying for the elimination of the code. They will sell more over priced hf rigs. The military even stopped using morse code and they are at least ten years behind everyone. Hf communications is almost a thing of the past anyhow. When ham radio first started it was on lower freqs than we use now. We need to look at the real issues here. CW is not the most reliable form of communication now. Packet,Amtor,Pactor and all the new dsp technology is where it is at. Not some unreliable, unpredictable bandwidth hog like ssb is. If I did have a code license I would just let my tnc send it and recv it anyhow, and it would run circles around any code operator. You all are just complaining about something you cannot avoid: CHANGE, most people dont like change but that is what ham radio is all about. You can have your cw and hf. I get more qso's now than I know what to do with. And with windows 95 they will all be more fun. I am talking to a ham in bosnia on internet phone as I type this. He is 5 and 9.
Dont blame the no code techs. Its not like we are all just dyin to get on your beloved low bands and erect some giant 160 meter world beater. Blame the radio manufacturers.

Well, if they won't learn code to get onto the HF bands, why would they learn it otherwise? How many no-code techs learn code in their spare time to use it just on VHF/UHF? I would be willing to bet that the number of people who learn Morse code will drop dramatically if the requirement were removed.

Perhaps not, but how does it compare to voice with its 3KHz requirement?

Great, a semantic argument ensues because someone didn't read what I wrote. Re-read what I wrote - I said all no code HF hams would BE ABLE TO use only phone (I didn't consider RTTY, etc. when I wrote that). I did not predict the actions of anyone. I simply stated the obvious. I did not say they'd all, with 100% certainty, do anything.

Of course, if any were to voluntarily learn Morse, then they no longer would be "no code", would they?

Using a TS520S HF rig on 10 meters (about 50W as measured by a Heathkit power meter) I made contacts from New Jersey to places like Estonia, ex-Yugoslavia, France, Vennesulvia(sp!), and such. A few years ago when the sunspots were good. The above distances are about 1/6 of the Earth's circumfrence.

Used a vertical planted in the back yard.

>You said:
>If code requirement is dropped for HF access, then all hams will
>be no code and have access to the HF bands. That is false for the
>following reasons:
>
>1. It assumes that because someone did not pass a CW test, that
>they will not voluntarily chose to learn and use CW on their own.

True, my followup shifted the meaning of "no code" from 'being unable to do
Morse' (the meaning I used in my original statement) to 'not having passed a Morse
requirement'. I was annoyed. Sorry.

However, my original statement was:

If the CW requirement were dropped, then all the no code Hams would
have access to the very limited HF bands while being able to use only
phone.

With the meaning of the phrase "no code" as 'being unable to do Morse', my
original statement is correct. Those without the ability to do Morse will have
access to the HF bands while being able to use only phone (although they could
use RTTY - that I hadn't considered when I wrote it).

If they learn Morse voluntarily, then they are no longer "no code".

>
>2. While elimination of CW testing would immediately allow no-code
>techs access to some HF, that access would be limited to the novice
>subbands only unless a change in privaledges beyond the elimination of

>the CW test was done (i.e. To operate on most amateur HF spectrum
>would still require the no-code tech to upgrade to general.)
>

The first sentence of 2. agrees with my statement, save the word "some", which implies a limiting statement. No conditional, limiting or grouping within the HF band was mentioned in my statement. No mention of privilege change was made either. They are all irrelevant to my original statement.

If we are to get this picky, then perhaps you too committed a logic sin. I asked why my original statement was fallacious and you then responded that it is fallacious because of the conclusion in that questioning statement. If so, without the conclusion, the original statement is not fallacious. Yes?

Let's rather talk about radio.

Cheers,

Chris.

All equipment for FRS is supposed to be made so it can not be modified.
My HTX-202 proves it can be done. The antennas are to be built into
the units so the user of the radio can't even replace it with a better
gain antenna. The radios will be limited to .5 watts. Where is the
problem?

PUBLIC NOTICE

Federal Communications Commission
1919 M St., N.W.
Washington, D.C. 20554

June 21, 1996

AMATEUR STATION VANITY CALL SIGN SYSTEM
FILING GATE 1A OPENS JULY 22, 1996

Amateur operators who meet the following eligibility standards may request a vanity call sign on or after July 22, 1996. File your request on FCC Form 610-V. Legibility is critical! If the information on your application is not legible, you could experience a delay in processing, lose the opportunity to obtain a requested call sign or even obtain a call sign different from what you want. You must hold an unexpired amateur operator/primary station license grant of the proper operator class, as described below, to request a vanity call sign for your primary station. To request a vanity call sign for a club station, you must also hold an unexpired club station license grant listing you as the license trustee. Refer to the licensee data base to verify that the call sign you are requesting is not already assigned. A call sign is normally assignable two years following license expiration, surrender, revocation, set aside, cancellation, void ab initio, or death of the grantee. See Fact Sheet PR5000 Number 206-V AMATEUR STATION VANITY CALL SIGN SYSTEM . For explanations of Groups A, B, C and D and the geographic Regions, see Fact Sheet PR-5000 #206, AMATEUR STATION SEQUENTIAL CALL SIGN SYSTEM.

REQUEST BY FORMER HOLDER (PRIMARY STATION) - For your primary station, you may request a call sign that was previously assigned to your primary, secondary, repeater, auxiliary link, control, or space station. When so requesting for your primary station:
You may request your former call sign even though it has been unassigned for less than two years. The two year requirement does not apply to an otherwise eligible primary station if the call sign was previously assigned to a station of the requestor.
You do not have to hold a class of operator license required for the Group (A, B, C, or D) for the call sign requested.
A call sign request by former holder may be from any Group in the sequential system.
Your mailing address does not have to be in the Region designated in the sequential system for the call sign requested.
A call sign requested by a former holder may be in any Region.

REQUEST BY CLOSE RELATIVE OF FORMER HOLDER NOW DECEASED (PRIMARY STATION) - For your primary station, you may request a call sign that was previously assigned to the primary, secondary, repeater, auxiliary link, control, or space station of your now-deceased spouse, child, grandchild, stepchild, parent, grandparent, stepparent, brother, sister, stepbrother, stepsister, aunt, uncle, niece, nephew, or in-law. When so requesting for your primary station:
You may request the former call sign of a close relative now deceased even though it has been unassigned for less thantwo years. Upon the death of the holder, a call sign is assignable immediately to an otherwise eligible primary station of a close relative.
You must be an Amateur Extra Class operator to request a Group A call sign.
You must be an Amateur Extra or Advanced Class operator to request a Group B call sign.
You must be an Amateur Extra, Advanced, General, Technician Plus, or Technician Class operator to request a Group
C call sign.
You must be an Amateur Extra, Advanced, General, Technician Plus, Technician or Novice class operator to request a Group D call sign.
Your mailing address does not have to be in the Region designated in the sequential system for the call sign requested. A call sign requested by a close relative of former holder now deceased may be in any Region.

You must show your relationship to the deceased person exactly as listed in the instruction, i.e., child, niece or in-law.

The license grant of the former holder now deceased must have been deleted from the licensee database. That is accomplished by a relative of the deceased submitting a signed request to have the license grant cancelled accompanied by a copy of an obituary or death certificate. The request for cancellation must be submitted to the FCC, 1270 Fairfield Road, Gettysburg, PA 17325-7245 prior to filing the application for a vanity call sign.

REQUEST BY FORMER HOLDER (CLUB STATION) - For the club station for which you are the license trustee, you may request a call sign that was previously assigned to that station. When so requesting for a club station:
You may request your club station's former call sign even though it has been unassigned for less than two years. The two year requirement does not apply to an otherwise eligible club station if the call sign was previously assigned to the club station for which the requestor is the license trustee.
You do not have to hold a class of operator license required for the Group (A, B, C, or D) for the call sign requested.
A call sign request by a former holder may be from any Group in the sequential system.
Your mailing address does not have to be in the Region designated in the sequential system for the call sign requested.

A call sign requested by a former holder may be in any Region.

REQUEST IN MEMORIAM (CLUB STATION) - If you are the license trustee for your club station, you may request in memoriam for your club station the call sign previously shown on the primary, secondary, repeater, auxiliary link, control, or space station license of a deceased person who was a member of the club. When so requesting in memoriam for your club station:
The club must have held a club station license grant on March 25, 1995.
You may request the call sign even though it has been less than two years following death of the club member. Upon the death of the holder, the call sign is assignable immediately to an otherwise eligible club station.
You must have in your station records a written statement (do not send to FCC unless requested) from a spouse, child, grandchild, stepchild, parent, grandparent, stepparent, brother, sister, stepbrother, stepsister, aunt, uncle, niece, nephew,
or in-law of the deceased confirming the deceased person's association with the club and showing consent of the relative to your request.
You must be an Amateur Extra Class operator to request a Group A call sign.
You must be an Amateur Extra or Advanced Class operator to request a Group B call sign.
You must be an Amateur Extra, Advanced, General, Technician Plus, or Technician Class operator to request a Group C or D call sign.
Your mailing address does not have to be in the Region designated in the sequential system for the call sign requested.

A call sign requested in memoriam may be in any Region.
You must enter the relationship to the deceased of the person giving consent exactly as listed in the instructions, i.e., child, niece or in-law.
The license grant of the former holder now deceased must have been deleted from the licensee database. That is accomplished by a relative of the deceased submitting a signed request to have the license grant cancelled accompanied by a copy of an obituary or death certificate. The request for cancellation must be submitted to the FCC, 1270 Fairfield Road, Gettysburg, PA 17325-7245 prior to filing the application for a vanity call sign.

A $30.00 fee is required with your FCC Form 610-V application. Payment of fees may be made by check(payable to "FCC"), bank draft, money order or credit card. If paying by credit card, you must also complete and submit FCC Form 159 with your FCC Form 610-V. (Do not send cash.) Send your application package to:

Federal Communications Commission
Amateur Vanity Call Sign Request
P.O. Box 358924
Pittsburgh, PA 15251-5924

If you do not qualify under the above eligibility standards, your application will be dismissed. A future public notice will announce Gate

2 which will have expanded eligibility standards.

For further information, contact the Consumer Assistance Branch at 1-800-322-1117.

-FCC-

That isn't outside the universe, that's just transforming energy
to mass, both are inside the universe.

>Looks to me like space (as we know it) is a characteristic of
>matter, not visa versa.

They certainly seem to be interrelated. I'm not sure I'd go so
far as to say one is a result of the other.

>73, Moritz DL5UH

Photons don't have any mass at all, neither rest mass, nor the consequent relativistic mass. The momentum transfer is a consequence of the energy contained in the photon. (There's a complex way to derive momentum directly from field theory, but the easier way to visualize it is to consider the mass-energy equivalence related by M=E/C^2 so that the momentum of a photon (travelling at C) is just M*V = E/C.) Another way to express light "pressure" (in bars) is 1/3 * Boltzman's Constant * T^4, or 2.35*10^-15 * T^4 with T in Kelvins and expressing the temperature of the exposed surface due to the light energy hitting it. Note this is not Brownian motion derived pressure, and works just the same on a satellite in space.

I'm no longer sure that the toy radiometers work on this principle, but photon momentum transfer doesn't depend on photon mass (megative or positive) since photons don't have any.

>>realistically? Thank you in advance for you assistance.

Gary Coffman gave an extensive technical answer to this question. However
there is another consideration. When I first set up my packet station I
connected to the local net via a hamgate, and thought it was pretty neat,
even if not fast (on 2 m @ 1200 baud). However I quickly realized that I
had compromised my passwords, since anyone could read them. So I logged
off, dialed in, and reset passwords. That was the first and last time I
tried that.

I applied during Gate 1 to regain my original call sign. Application was made by First Class Mail sent on May 30th (I didn't want it to arrive prior to the gate opening). According to the UALR web call sign server my call was reinstated on June 19th.

Now, to the point of curiosity. My check was processed by the FCC through the Melon Bank on June 4th (which sets the arrival date of my application as probably Monday or Tuesday, June 3rd or 4th). In any case, the number 19 was written on the face of the check in red ball-point pen. Remember that my application was processed on the 19th. Is this a coincidence or is the FCC assigning incoming 610Vs to be processed on specific dates? Anyone else notice a number on their fee check? And, if so, does it coincide with the processing date?

This is of course no big deal either way. Just a curiosity!

The schools haven't abandoned learning. That has never been their task.
Instead, they feed the little monsters Ritalin to keep them quiet, warehouse
them, then spit them out like sausages on a production line at the end of
12 years constant grinding. Learning has always been the task of the
individual, not of education factories. It is the result of an inquiring
mind at work (something the education factories strive to suppress in
their mission to turn out conformist little Statists able to regurgitate
factoids on demand).

Teachers can be useful, in the Socratic manner, by leading their student's
interests in certain directions, but it is the student who ultimately
learns or doesn't. Like the horse led to water, it is ultimately his
choice whether he drinks or not. An education factory isn't required,
though libraries and laboratories are useful. Amateur radio is one such
lifelong laboratory where the student can pursue paths illuminated by
his inquiring mind.

>Also,

>they could use RTTY, but how many would (this isn't rhetorical, I have no idea)?

Probably not RTTY (that's dying out), but certainly PACTOR, GTOR, and
Clover. Digital mode operation is now used by over 22% of amateurs on
HF (ARRL survey), and growing rapidly. Throughputs range from 6 to 40
char/sec, or roughly 72 to 480 WPM, well above the capabilities of
Morse users. And they can operate at CNRs where most Morse users give
up. While voice, at 120 WPM, is faster than Morse, some of the newer
digital methods put voice operation to shame while consuming considerably
less bandwidth.

>The total space available in the HF bands is very small. Having lots of people using
>it WITHOUT the ability to use such a narrow band mode as Morse would create
>much more congestion than if they were to use Morse.

Sure, but better methods than Morse exist, as noted above, which don't
require wetware modem conditioning. Morse is *one* narrow bandwidth
option, but certainly not the only one (nor the best one).

>Without a Morse requirement and congestion on the voice bands, how long would
>the CW reserves remain just for CW (I already hear a number of SSBers operating
>on the CW realms)?

There aren't any "just for CW" reserves on HF *now*. Only 50.0-50.1 MHz
and 144.0-144.1 MHz are CW exclusive amateur band segments, and they don't
require a manual Morse speed test for access (ironic, no?). On HF, there
are two different subband types by emission for US amateurs. There are the

voice/image segments and the RTTY/data segments. CW operators tend to crowd into the RTTY/data segments in preference to the voice/image segments, but they don't have any exclusive claim to either type of segment on HF.

Some of us have proposed setting aside the lower 25 kHz of each band as a CW exclusive sanctuary so that CW operators won't fear being crowded off the bands by other modes should we eliminate Morse testing. But to date, none of the CW test forever types have cone forward to support the idea. (These segments would be like the current 6m and 2m CW exclusive segments in that the only test of Morse speed required is the one conducted on the air every time you try to make a contact.)

Note, the SSB you hear in the "CW segments", is probably foreign operation. Most contries don't have the elaborate by mode subbands with which the US operator is burdened.

>A couple of people suggested that the proposed HF no-coders would learn Morse
>once they encountered the congestion. Of this I am skeptical, for if they won't
>learn Morse in order to gain access in the first place, I cannot believe they'll learn
>it in order to reduce congestion.

I don't think so either. There are much superior non-voice methods available than manual Morse. Morse is a mode on welfare, requiring government force to keep it viable. Eliminate the forced recruitment of the speed tests, and amateurs would likely choose other, better, non-voice methods. Though no doubt a few would continue to learn Morse simply for nostalgia value, just as some still use AM.

>Others have spoken of the spectral efficiency, data throughput, etc. This all
>assumes that maximum throughput per channel is what is important. I don't
>believe this is so. It is (IMO) number of people per band that is more important.

Then push for *low speed* Morse. :-) At one dot per hour (Farnsworth), we could put a *lot* more people on the air. But how effectively would they communicate? If it is nothing else, amateur radio is about communication by radio. The more quickly and naturally one can communicate content, the better. Thus throughput matters (unless you have nothing to communicate).

>Besides, what is the spectral efficiency of a voice channel that consumes 3KHz
>(ideally)?

One useful measure of spectral efficiency is information content per unit bandwidth per minute. Normal speech is 120 WPM (except for some Southerners and Southerner wannabes). SSB speech fits in a 200 Hz-2.1 kHz bandwidth, so it has a "Q" of 120/1900=0.063. 20 WPM Morse with standard 5 mS shaping fits in a 400 Hz bandwidth, so it has a Q of 0.05, less than SSB. Now Clover fits in a 500 Hz bandwidth and has a speed equivalent to 480 WPM, so its Q is 0.96. Which one do you think is more spectrally efficient? Which is the least spectrally efficient?

Note: You can copy Morse with a narrower filter than 400 Hz, but you are clipping off part of the transmitted signal when you do. That signal still spills over onto other users within +/- 200 Hz of the

carrier. That's inherent due to the sidebands generated by the
keying shaping. Use square shaping and the key clicks spread over
tens of kilohertz (theoretically over an infinite bandwidth) causing
interference to other users.

>Why would anyone care if someone cannot saturate their 300Hz slice with maximum
>data throughput because they can work at only 5 WPM Morse? Are they to have
>time limits imposed, forcing them to speed?

You are the one wanting the most people to be able to use HF. Frequency
division multiplexing isn't the only way. Time division multiplexing
frees spectrum too. The quicker content is passed, the quicker other
people can reuse the same spectrum for their contacts.

>Is everyone to use some digital mode,
>and in order to maintain maximum data throughput on the "channel", everyone
>is to be connected to concentrators? Of course not.

Why "of course not"? If suitable "concentrators" can be developed, why
not use them? One such "concentrator" (poorly implemented at present)
is packet. It allows many users to share a single channel. Granted, HF
packet, as presently done, is a poor joke, but that's an implementation
issue, and not inherent to the concentrator technique. A DAMA protocol,
and a better modulation encoding, could do wonders for HF packet.

>Spectral efficiency, Shannon, Nyquist, sampling and signal theory aside, ten CW
>operators could fit into the space of one phone operator. On HW, this is, I believe,
>important.

1900/400=4.75 (call it 5 since fractional operators aren't allowed). But
5*20 is only 100 WPM, not as good as the SSB operator's 120 WPM. It'll
take each of those 5 CW operators 6 times as long to say the same thing
as the SSB operator, so 6 SSB operators could speak in the time taken
for the CW operators to "speak". 6/5=1.2 advantage for a SSB roundtable,
an informal form of TDMA which works quite well.

>A rhetorical question to those who say they wouldn't use Morse, thus it's a waste of
>time. I suppose the same argument can be used for the technical component of

>believe the tech components should be strengthened. I haven't written a Ham
>exam yet, so no-one can accuse me of trying to create an exclusive club of which
>I just happen to be a member.

The government has a legitimate interest in amateurs operating clean
transmitters, because dirty transmitters can cause harm to others, in
and out of the amateur service bands. Since amateur transmitters, even

the store bought ones, are not Type Accepted, the government depends on the amateur's technical knowledge to keep them in compliance. That's why there is a technical test. The government could require all amateur transmitters be Type Accepted, and then like in other services with Type Accepted equipment, such as land mobile, the government wouldn't have a compelling need to require a technical test. However, that would sorely impact the experimenter (one of the main reasons for the amateur service), so a technical test is required.

There is no similar compelling government interest requiring continued Morse speed testing. There is no evidence that harm has been done by slow Morse usage, or even by no Morse usage. It is merely one of several text encodings (and not the best) that an amateur may choose to use, or choose not to use.

It is important to realize that even among those who know code, some (about half of those on HF) operate no code. At all. Ever. (And many of them couldn't pass a Morse speed test for their license class today if their lives depended on it.) Yet I would suggest that is not of legitimate concern to the goverment. Those de facto no coders harm no one's interests but their own (if that), and that's their business, not the government's.

Having Big Brother insist we "eat our Morsies because they're good for us" is an illegitimate abuse of government power, especially since the government does not insist that we *continue* to "eat our Morsies" after we pass their test. If the government did insist we spend 50% of our HF time operating Morse, then no test would be required since we'd have to learn Morse anyway to comply with the usage edict, and formal testing would thus be redundant. So use it or don't use it, a formal Morse speed test is either redundant or irrelevant.

This "Scummy No-Code-Tech" actually did once pass a code test -- I wish I'd hauled a** down to the FCC to pass theirs after passing the Boy Scout's 5wpm test 30-odd years ago; if I had, I'd be QCWA instead of N1VUX.

I suppose I could do it again. I just find it as silly as wig-wag semaphore. Now that I've found a Farnsworth program that runs on the HP48, I may just do it...

Just remember, No-Code-Tech's are licensed to commit morse-code CW emissions from from 50MHz to Daylight, no test required. Which includes the 6m DX band. And includes the current open challenge, the 2m trans-Atlantic. And includes the EME WS work. (Heck, there's even been one morse-code QSO above daylight: two guys got about as much range with Gamma rays (modulated with lead shutters and decoded with Geiger-counters or some such) as the club's two 1.2Gig guys are expecting to get, albeit FM voice.) We're allowed to use the code, we're not certified code free, we've just passed a code-free test.

I think we might as well test for damped wave theory as ability to send or receive hand-keyed morse-encoded CW emissions. (Or Farnsworth-encoded if from an ARRL VEC.) The technical and regulatory components of the exams should be the real limiting filter, the real challenge. Just removing the misnamed "CW " test would be wrong; but not changing the current exam structure is equally wrong. I'm embarrassed by how easily I passed the Tech exam (the novice exam should be easy) and how close I got to passing the General written exam w/o additional study (it being 15 years since physics class). The guys who complain that the current no-code-tech ticket is a worthless piece of paper are perhaps right, but it is not the lack of a CW test that makes it so... its a test after the fashion of our public schools, sigh. Well, we're working on our local public school. Maybe we can make the tests tougher too. The idea that the 20wpm is the hard part of getting Amateur Extra is absurd. I hear tell that back in the good old days you had to actually know some electronics, be able to design an oscillator, to get a General ticket. hey, I'd like to learn that. I'm a little scared that I'm licensed to repair and build transmitters without being

tested on that! (Although I understand it's the oscillator you didn't
intend to build that causes the most trouble...)

What are we to do? Put some theory back in the "theory" exams.
Then remove the obsolete CW requirement from WRC-97 and FCC regs.
And add some real technological demonstration to the FCC exams per
existing treaty requirements.

My prior comments on the exam structure and Len Winkler's
Written-Only-General proposal are at http://world.std.com/~wdr/phil.html

How about a BC-35A? All the Icom IC2/3/4/02/03/04 accessories
fit the RS HTs (batteries, speaker/mikes, cases, chargers, etc),
and there are scads of them available, both used and aftermarket.
The Alinco HTs have one thing the RS HTs don't, and that's intermod.
But I wouldn't consider that a feature.

Yo Jim, surprisingly -- several bootleggers have appeared over the years on CW. Recently a bogus P5, a Tristan De Cunha wannabe, a VU7, to name a few.

Can't imagine but tis true.

SB QST ARL ARLB040
ARLB040 Field Day Bulletin

Crew members aboard the current STS-78 shuttle mission are planning to operate during this year's Field Day. Valid two-way contacts with the shuttle will count as satellite QSOs for QSO point and bonus point credit. Contacts with the packet robot do not count.

As part of the SAREX activities taking place during this mission, set to launch June 20, NASA Payload Commander Susan Helms, KC7NHZ, Mission Specialist Charles Brady, N4BQW, and Payload specialist Robert Thirsk, VA3CSA, hope to find free time to hand out points from the shuttle to Field Day ops. The crew will use the following separate receive and transmit frequencies:

FM voice downlink: 145.55 MHz.

FM voice uplink: 144.91, 144.93, 144.95, 144.97 and 144.99 MHz.

Does anyone know of any kits/plans/directions for the construction of microwave gear? I'd like to start out with a simple wideband voice link using a horn and dish, and progress to maybe a 10GHz data link. I have seen the project in the 1994 ARRL Handbook, and think it might be a little too complicated to start with. Any help along these lines will be GREATLY appreciated.

It uses 4 6JE6C television sweep tubes in parallel. Typical operation
is about 1000vdc at 750-800ma. on the plates with 100 watts of drive.
If you see about 650 watts of CW output, it is working about normal.
BE AWARE of the following,
don't key down for more than about three seconds at a time while
tuning, it will surely damage the tubes!
The amp should draw no more than about 90ma. at idle with no rf input,
if it draws more, the tube life will be short and it will be prone to
melt downs. You may need to add some normal diodes to the bias zener
to throttle the idle current down.
Sweep tubes are easily destroyed at these voltages and currents, and
I never classed the gla-1000 as more than a poor boy's amp.
If you can, buy a real amp with 811A's or PL172 or 3-500Z's or
something along the line of a real amp.
After you melt a few quads of 6JE6 tubes and pay about $100 for a set
of replacements, you will wish you had bought a better amp.
Just my opinions. 73 WN3SOH/WB3BIO/KD3SH-TF temp

This does seem to be one of the major problems of the amateur radio service today, too many people can't tell the difference between it and stamp collecting or bird watching or water sking. To these benighted souls, it is "just a hobby", of no value to their nation or themselves beyond a simple passtime.

Well having just returned from the 1500 mile round trip to SC and back, I can tell the interested parties that they have absolutely nothing to worry about....the truth is, there have been more posts from different persons on the newsgroups than I heard hams on 146.52 in nearly 28 hours of driving time with the rig on 146.52 most of the time.

I won't bore everyone with a full blown description of what I did hear, but it wasn't much.....and at the times I made some calls, I got no responses......this was during daytime travel, too, not in the wee hours of the night when you might expect things to be quiet.

Like many others, I just read the article in the most recent QST on using 146.52, and all I can say is the author has said it all alot better than I could! We need to listen and call on 146.52 more when we"re on the road over long distances.....I'm sure there were hams out there, I gotta believe there just has to be some.

I also had a modest sized sign in the rear window with my call and 146.52 displayed on it, a dead give away to any fellow ham who passed me.....and I gotta think that in the hundreds of cars that passed me on I81 I77 I85 and I95 there had to be a ham or two......

Well, I'll try it again when I make the same trip in 3 weeks. Maybe it'll be a little better... I mean, I'd hate to think that the "11 meter crowd" is really all that much more friendly and outgoing then us hams...

And I said I wouldn't bore ya! :-)

PS to all the packet racket bunch.....144.9, 145.0 and 145.1 were pretty quiet, too! :-) :-)

WX3Y, Kevin nr Williamsport PA, where a bunch of adults have made kids playing baseball a real going business.....(please, that's not flame bait) ???

SB PROP @ ARL $ARLP025
ARLP025 Propagation de KT7H

ZCZC AP46
QST de W1AW
Propagation Forecast Bulletin 25 ARLP025
From Tad Cook, KT7H
Seattle, WA June 21, 1996
To all radio amateurs

SB PROP ARL ARLP025
ARLP025 Propagation de KT7H

Last week's bulletin gave the dates for solar data at the end of the report as June 6 through 13. The data was only through June 12.

We just had 5 days of zero sunspots. Look for more periods of no visible sunspots as we move through the solar cycle minimum. The most disturbed period was around 0300z on June 19 when the K index was five. The Boulder A index for that day was 15.

Solar flux is expected to stay below 70 until the end of June, then peak just above 70 around July 2 and 3, moving again below 70 after July 5.

For Field Day weekend look for more quiet conditions, with solar flux just below 70 and quiet geomagnetic conditions.

Sunspot Numbers for June 13 through 19 were 0, 0, 0, 0, 0, 12 and 24, with a mean of 5.1. 10.7 cm flux was 68.1, 67.7, 67.3, 66.9, 67.4, 67.7, and 68.5, with a mean of 67.7.

Here are some path projections for Field Day weekend:

From the Eastern USA to mid-USA, 80 meters should be open from 2230 to 1300z, with strongest signals at 0200 to 0300z and around 0930z. 40 meters should be open around the clock, with strongest signals from 0200 to 0900z. The best bet for 20 meters is around 1400 to 1500z and 2100 to 2200z.

The path between Eastern USA and the West Coast should be open on 80 meters from 0230 to 1030z, and 40 meters from 0100 to 1230z, with best signals from 0400 to 0930z. There is a good chance for a 20 meter opening from 1700 to 0430z. 15 meters could also open around 0230z.

From the West Coast to mid-USA check 80 meters from 0215 to 1230z, with best propagation from 0500 to 1030z. 40 meters may be open continuously, with the weak period from 1700 to 2200z and the best period around 0300 to 1100z. 20 meters should be best from 1200 to 1630z and 2200 to 0800z. There is a small chance of a 15 meter opening from 1900 to 0500z, but starting much later for more northern paths.

> >Me: If an amateur attempts to start, or maintain, a conversation with
> >another amateur on the same frequency over the top of a couple out-of-
> >band operators, could that be construed as malicious interference?

malicious interference is malicious interference no matter what the case may be. I doubt that it matters if the person you would intend to interfere was an unlicensed person operating unlawfully. Two wrongs don't make a right.

By talking over top of that person you may only cause them to move to another amateur channel.

I don't know what the solution would be but I don't think that talking over top of them is it. Look for something a bit more diplomatic I think.

>hi I'm looking for a mod for the ict22a, any mod will do.

1. Reverse the polarity of the battery pack.
2. Short the antenna to ground.

These will certainly modify it's operation.

4053. "This Week in Amateur Radio" Returns to Satellite Air

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-21 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <pPDNUdQ.sanderman@delphi.com>
Source record: 222491

"This Week in Amateur Radio" returns to satellite air
on Saturday, June 22nd. An agreement has been reached to put the
the national bulletin service on Hughes Communications SBS-6
commerical communications satellite through the facilities of the
W0KIE satellite network.
"This Week in Amateur Radio" is a weekly on-the-air bulletin
service in audio newsmagazine format. The service carries ARRL and
RAC bulletins, contest and convention information, propagation
forecast summaries, "The RAIN Dial-up", and other features.
A network of over 100 nets and repeaters throughout North
America had carried the service until March 30th, when the "Tech
Talk Network" was dissolved. Efforts to find a new "C" band (4 GHz)
satellite carrier are still in progress. The move to "Ku" band (12
GHz) will force some affiliates to retrofit their receiving systems.
The service will feature a new, shorter 50 minute format.
Previously, the program ran an average of 75 minutes each week.
Regretfully, the new format and uplink timing constraints eliminate
the possibility of any future live call-in features. In addition,
"This Week in Amateur Radio" will no longer be able to carry the
"Amateur Radio Newsline" dial-up feature. The move to a "leaner and
meaner" production should serve to increase listenership.
According to its producers, the service will move to 9:00 PM
(EDT) each Saturday. It will be carried on SBS-6, transponder 13B
upper. The transponder center frequency is 12.019 GHz. Affiliates
will need to tune up in frequency to 12.031 GHz. Program audio will
be on a 6.2 MHz analog subcarrier. SBS-6 is co-located with Galaxy
VI at 74 degrees west longitude. Efforts are also being made to
"simulcast" the service on the internet, but plans are incomplete at
this time.
"This Week in Amateur Radio" is produced by Community Video
Associates, Inc., a New York State not-for-profit corporation based
in Albany, NY. Production and transmission expenses are
underwritten by donations from repeater operators, amateur radio
clubs, and individuals. Further information is available from
George Bowen, N2LQS, at 518/283-3665 (e-mail kxkvi@delphi.com) or
Stephan Anderman, WA3RKB, at 518/664-6809 (e-mail sanderman@
delphi.com). You may also reach them @ WA2UMX.FN32AW.NY.USA.NA via
the AX.25 packet network.
Look for "This Week in Amateur Radio" to return to the air
Saturdays at 9:00 PM (EDT) beginning June 22nd. Affiliates are
asked to please acknowledge receipt of this bulletin.

Message-ID: <4qcufs$9ck@newsman.murdoch.edu.au>
Source record: 222526

Wanted - keen 2 metre enthusiasts in southern Indian Ocean region!!!

Reception of the West Australian VHF Group beacon on 144.560 Mhz at Bunbury OF76 has been reported by Yvon FR1GZ on Reunion Island on 30 May at 13.04 UTC and 4 June 1996 at 13.31 UTC.

This beacon has an effective radiated power of about 100 watts horizontally polarised at a bearing of 260 degrees. It is co-located with a 6 metre beacon on 50.306 Mhz with similar erp and bearing with on-off keying on 50 Mhz and FSK on 144 Mhz.

A study of the relevant weather maps and satellite pictures suggests that this propagation over the 6 000 Km path was not only possible but repeatable!

Any further reports of reception would be most welcome - better still a phone call to endeavour to make two way contacts!!

There are serious threats to a variety of UHF Amateur Radio allocations. They do need to be taken seriously by all Amateurs. I've written an editorial for Ham Radio Online addressing these issues - inspired by the number of Amateurs who don't seem to understand that these threats are very real - and started to suggest ideas for dealing with them. I've got more ideas too and when I have a chance, I'll write them down.

Visit Ham Radio Online, probably the #1 web site for Ham Radio in the world, at http://www.accessone.com/~vbook/hronline.htm

4061. 2m mobile noise from 96 VW Jetta

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-21 00:00:00 UTC
From: gogood@sprynet.com
Message-ID: <31c9f157.599348965@news.concentric.net>
Source record: 222528

I recently purchased a 96 VW Jetta and moved my Kenwood TM-241A from my previous car.

With the ingition switch on (engine not running) I get S4 white noise! This isn't transmitted via the power, I have run the rig off a gel cell with no difference. I also pick up the interference with an HT.

The interference spans from 142 to 150 Mhz - drops off completely beyond that range - unfortunately that is the entire 2M band in the US.

I have isolated the source to under/behind the dash using an HT to sniff. Things are much quieter infront of the firewall than behind.

Also on the down side, wiring diagrams are not yet available for this vehicle - have one on order for Aug delivery.

What it isn't (by removing fuses)

Engine electronics
Fuel pump
AC/Fan motors

I'm suspicious if the running lights. Wonder if they have a FET chopper/inverter to run the headlights dim during the daytime. This chopper may still be running (if it exists) even with the headlamp fuses pulled. That iws about the only new feature and I have no such problem with earlier models of the same vehicle.

Anybody have any thoughts? Short a wiring diagram things are tough - also it's not easy to pull the dash!

>Morse code will drop dramatically if the requirement were removed.

While I agree that fewer amateurs would learn Morse code in the absence
of a requirment, keep in mind people sometimes tout the advantages
of CW. If CW has advantages, people will learn it in the absence of
a requirement; if people aren't learning it in the absence of a
requirement, there probably aren't advantages.

As for "how many techs learn code to use it on VHF/UHF?", how many
amateurs use CW on VHF/UHF in the first place? There's very little
CW activity on VHF/UHF, apparently mostly on 6m and 2m, and this is
historical, not due to the dropping of the code requirement from the
Technician class.

Perhaps the increased level of CW activity on HF is enough to cause
people to learn code, regardless of the requirement.

>>I suppose if you're looking at how many transmitters can be active

>>better. However, if you're looking at how much information can
>>be transferred in a given amount of time in a given amount of
>>bandwidth, CW doesn't do so well.
>
>Perhaps not, but how does it compare to voice with its 3KHz requirement?

Well, assuming that people speak at around 250 WPM (my sister, an
educator, supplied this estimate) it appears that CW and phone may
have roughly the same spectral efficiency.

What's your point?

>>>> How is it that you can with 100% certainty predict the actions of
>>>> thousands of people whom you've never met?

>>>
>>>Where did I claim this?
>>
>>Where you said that all no-code HF hams would only use phone.
>
>Great, a semantic argument ensues because someone didn't read what I wrote.
>Re-read what I wrote - I said all no code HF hams would BE ABLE TO use only
>phone (I didn't consider RTTY, etc. when I wrote that). I did not predict the
>actions of anyone. I simply stated the obvious. I did not say they'd all, with 100%
>certainty, do anything.

Given that "no code HF hams" could be reasonably interpreted as "amateurs on HF
that have not passed a code test", I don't think I misread what you wrote. In
fact, even amateurs that don't know a single character of Morse could
use a multi-mode TNC to operate CW. If what you meant to write was
"all amateurs on HF that don't know code won't be able to send or receive
it by ear", it wasn't obvious.

>Of course, if any were to voluntarily learn Morse, then they no longer would be "no
>code", would they?

As mentioned above, that depends on what is meant by 'no-code' - if it means
'do not know code' then you're correct; if it means 'never passed 1A/1B/1C',
which is a reasonable reading, you're incorrect.

I recently sent the following email to the ARRL. I thought I'd share it here as well, in the event that anyone has the kind of information that I'm looking for. I'd be glad to collect and re-post. If you send me some information, please be sure it is accurate, and please send it directly to my email address below (rather than doing a follow-up post).

73
Ken KF4BQF

In my own efforts to build a decent argument for the preservation of the 2m and 70cm bands, I have been unable to locate a good source for hard data concerning the use of the bands. It should be within the ability of the ARRL to easily locate statistics on such matters as

- the number of 2m repeaters and amateur clubs in the USA
- the percentage and number count of new licensees who are no-code technicians
- sales of 2m rigs in recent months: HT, mobile, and base
- the number and frequency of ARES/RACES, SKYWARN, and NTS nets and other regular training excercises
- the number of times amateurs were actually deployed in disaster situations last year
- a comprehensive list of other public-service activities serviced by the 2m and 70cm bands.

Posting this information would help all hams by giving us ammunition for our arguments, and also help make it clear what the public stands to lose (not to mention those who own all that 2m equipment).

Let me know if you have any ideas. I've sent my letter to the FCC; I'd like to send more to Congress and the Vice-President with some solid information.

Thanks and 73,

Ken McCoy

: > it.
: > Jim, WA7NDD.

: Very good points, which is why I am in favor of the NII proposal at 5 GHz,
: even though the current NPRM doesn't go far enough in my mind. Hams are in an
: excellent position to provide NII links, and something like that might breathe
: new life into the hobby.

: Unfortunately, the ARRL will do it's usual short-sighted knee-jerk and try to
: kill it, even though that will be just another nail in our hobby's coffin.

I too am in favor of the NII proposal at 5 GHz. I see a possible
future for amateur radio as providers of "universal access" parts of
the information super goat path.

Seriously, if hams could get their act together, we could provide a
high speed radio network with full mobile access capability that
rivals anything produced by commercial organizations. Once we get the
technology working, it could then migrate to using part 15 licensed
radios and provide a real social benefit.

However, this will mean that hams will need to learn about modern
modulation techniques, and network protocols unlike the current packet
radio toys.

I wish more people would do that too. I also have my call posted on
the rear of my vehicle and usually listen to 146.520 on the highway.
(unless I am using Zia connection) I have seen plenty of ham call
signs on vehicles but haven't gotten one to respond back yet.

au (au@ix.netcom.com) wrote:
: Yep here we go again with another unlicensed "service" to attract
: the fruitcakes from 11 meters. Big linears and echo mikes are on their
: way to UHF GMRS channels. It would have been one thing to put the FRS
: in its own little splinter channels, but the FCC had to stick the
: new "service" on most of the same frequencies! There are thousands of
: legitimate LICENSED users on GMRS. Is it now legal to speak to
: unlicensed stations? Can FRS users access the repeaters on GMRS
: legally now? What's wrong with 11 meters for continued unlicensed
: operation?

GMRS and FRS users supposedly will be permitted to communicate with
one another. The FRS freqs will be between GMRs repeater freqs, so they
will not have access to GMRS repeaters. The bandwidth of the equipment
should eliminate interference.
11 meters simply.... sucks... would you let your kid listen to all
the idiots on 11m? There has been a need for a while now for something
like FRS. A sort of happy medium between GMRS and CB.
I seriously doubt the 11 meter "Inbred Operators" (tm) will hardly
even notice FRS. They like the "skip" properties of 11m and the fact
amplifiers, echo mikes, and noise toys are so readily available. Since
FRS equipment will be handheld only, with little power, the CB jokers will
probably figure FRS to be not much more than those 49 MHz "kiddie band"
walkies. Plus, for some odd reason, the Inbred Operators seem to dislike
FM. Those who have FM capability rarely use it. FRS will be FM. That is
one of the points I like about it. Clean, crisp, FM. I see GMRS in my
future, although I also see FRS as a definite must. But then again... I
like radio. :)
In my area, Columbus, OH GMRS is essentially empty.... I have
found 1 maybe 2 repeaters.... all of which carry business transmissions,
including the so-called "emergency channel" I hope maybe one benefit of
FRs will be to lower prices on GMRS stuff as well. They are close to
reasonable now.

Let's see what happens. FRS is here.... all we can do is wait and hope.

4072. Field Day Lindenhurst, LI

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-21 00:00:00 UTC
From: tomcar@newshost.li.net
Message-ID: <4qdtob$mv9@linet06.li.net>
Source record: 222539

Field Day:

The Great South Bay Amateur Radio Club, in conjunction with the Babylon Amateur Radio Emergency Service (ARES/RACES), will again be participating this year in the American Radio Relay League's nationwide emergency communications exercise, Field Day, on Saturday June 22 and Sunday June 23, 1996.

The purpose of the exercise is to test the communciations capabilities of the town's emergency plans in an extreme situation in which there is no use of commercial power, phones or normally used communication equipment. The "ham" operators will be making as many contacts as possible with other hams throughout the US and Canada, nonstop, within this 24 hour period.

Everyone is welcome and encouraged to stop by and talk with some of your local emergency personnel. Additional information about local amateur radio operations will be available at the information booth. Anyone interested in emergency communications and amateur radio is encouraged to stop by.

The "on the air" activities will be commencing at 2:00 PM Saturday at the Babylon Town Hall park located at 200 E. Sunrise Hwy., North Lindenhurst, NY. the event will be securing at 2:00 PM Sunday.

If you need further information please contact Walter Wenzel, KA2RGI, Field Day Coordinator c/o the Great South Bay ARC, P.O. Box 1356, West Babylon, NY 11704-0356, by phone at (516) 957-0218 or E-mail at wwenzel@li.net.

Field Day is a nationwide emergency prepardness exercise that is held every year on the 4th full weekend in June. The object is to set up radio stations and make as many contacts over the radio as possible using only emergency power sources (batteries and geneators, no commercial power). Some people operate from their homes. Others operate from tents in the middle of a field (major storms can destroy buildings). Thousands of amateur radio operators across the country participate every year.

GSBARC holds its field day activities every year at the Babylon Town Hall in North Lindenhurst. This year we are planning on running 10A. This means we will be setting up 10 stations for communicating with other people (actually there are more than 10 stations but some categories don't count in the total). Power is provided by gas and propane generators.

If you would like to operate in Field Day but have no place to go, come on down. We have lots of positions to fill. Non members are welcome. Set up will start at 07:00 Saturday morning.

> Is there an internal battery that retains the memory?

Yes, in most modern radios, there's a lithium battery (usually a button-shaped battery like those used in wristwatches) which holds a voltage on the memory circuit so it won't lose its mind. These batteries seem to last between 3 to 10 years, depending on the radio they're in. It's probably not a big deal to replace. Sounds like a good bet that the battery is your problem.

Burt,

You miss the point. This is an amateur radio newsgroup. It isn't
dedicated to politics or to your desire to insult Germans. Why don't you
take it elsewhere since it seems quite obvious that you are annoying most
folks? Perhaps that is your sole intent. It must be satisfying to you
to know that the only thing you're known for is upsetting folks.

I suggest you use your time to do something constructive with your life.

4087. Drawing diagrams on FCC tests

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-22 00:00:00 UTC
From: atkes@imap1.asu.edu
Message-ID: <4qfuho$ore@news.asu.edu>
Source record: 222354

Several months ago I asked on the net when the FCC stopped requiring drawing of schematic diagrams on the written exams. Everyone who responded who took his test in the 1950s and before said he drew diagrams and only 1 or 2 people claimed to draw them in the 1960s and later, while many, who took their exams in the 1960s, including me, remembered not drawing diagrams.

I was looking through some older QSTs, and I came across an article in the July 1960 QST pages 54 and 55, "FCC written Exam Procedure Changing" which answers the question. It describes the change over from tests where applicants write the numbers of the answers to multiple choice questions directly on their exam paper to a "new" system (like the tests I took) where you black in a spot on a separate answer sheet. Quoting from the article:

It is expected that use of the new system may begin at some field offices in July and August. [that is, in 1960 -KES] Present plans are that each office will exhaust its supply of the old style examinations for a given class before beginning use of the new questions and answer sheets. The scope of the questions will be modified only to a minor degree, if any. Instead of requiring the examinee to draw diagrams, multiple choice diagram questions will be provided. For example, the examinee should be prepared to choose: the correct place to connect a neutralizing capacitor in an amplifier; the correct name of an oscillator circuit; the correct descriptive name for a power supply circuit; the correct descriptive name for an r.f. circuit, etc.

So it is clear that diagram drawing was phased out at the end of 1960, and the result of my little survey was correct.

Kevin,

That sounds about right. When I took my Extra class test back in 1967 there were 12 diagrams to draw out of 100 questions. The other 88 questions were multiple-choice.

Also, the code test consisted of 5 minutes of code of which 1 minute had to be copied without mistake. Once that segment was completed successfully, the Ham then had to send some code with a code oscillator until the FCC examiner was satisfied.

4091. GB2RS News 23rd June 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-22 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <835455135snx@llondel.demon.co.uk>
Source record: 222358
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 23rd of June and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The July edition of RadCom was posted to RSGB members this week. An Opinion Survey on the Future of Amateur Radio was included with the magazine as a four-page supplement. The survey is open to anyone interested in amateur radio, whether or not they are a member of the RSGB. Any GB2RS listener who would like to receive a survey form is invited to write to "Survey Request", RSGB Headquarters, Lambda House, Cranborne Road, Potters Bar, Hertfordshire, EN6 3JE. Please enclose a large self-addressed stamped envelope. Please note that the completed forms must be returned by the 29th of July.

G8ALO's 70 centimetre GB2RS news broadcast, provided in the Birmingham area, is proving very satisfactory. The plan is to make it permanent, but before this can be done at least one reserve reader is needed. He or she should be in the Birmingham area and preferably not far from the station of G8ALO. Anyone wishing to volunteer should contact either G8ALO or GB2RS Manager Ian Kyle, GI8AYZ. Their addresses are both correct in the RSGB Call Book.

Because of continuing difficulties with interference, the 0900, 80 metre GB2RS broadcast from G4ARZ will move to 3640kHz next month. The last broadcast on 3650kHz will be next Sunday, the 30th of June. We wish to express our thanks to the newsreaders who have attempted to provide the service on the original frequency in the face of severe difficulties. It is at their request that this change has been made.

Now some items of HF DX news from the weekly RSGB DX News Sheet, edited by Chris Page, G4BUE:

From the Minquiers, a group of small islands off the south coast of Jersey which count as EU-099 for the RSGB IOTA Awards, Jim, G3RTE, and Phil, G3SWH, plan activity from Friday the 28th of June until the 1st of July. Callsigns will be GJ3RTE Portable on SSB and GJ3SWH Portable on CW and they plan to run two stations on 10 to 80 metres. QSL both callsigns to G3SWH.

From the Dodecanese Islands - SV5 - DL9UDS is active from now until the 4th of July. He is operating CW and SSB on all bands from 10 to 80 metres, plus 6 metres, with the emphasis on the WARC bands.

And from the Cayman Islands, WB8YFE was planning activity from Tuesday the 25th of June until the 2nd of July, with emphasis on 6 metres.

Now news of some special event stations:

From Morecambe in Lancashire, GB2MB and GB4MB are on the air today, the 23rd of June, at the start and finish of the historic walk across the sands of Morecambe Bay. GX0WJW Mobile will transmit from the Queen's Guide's tractor on the sands on 80 metres.

GB0HSR is also on the air today to celebrate the 25th anniversary of the Havenstreet Steam Railway on the Isle of Wight.

On Saturday the 29th of June the South Normanton and District Amateur Radio Club operate GB0CCD at the Recreation Ground in Crich, near Alfreton, Derbyshire. The station will be active on HF, 6, 4 and 2 metres, 70 centimetres and on 1.2 Gigahertz amateur television.

And next weekend, the 29th and 30th, GB2DHH will be on the air from the Mosquito Aircraft Museum at London Colney near St Albans. The last flying DH98 Mosquito aircraft will display over the museum from 12 noon on both days.

Next the Rally News, and we know of no rallies for today.

Next weekend, from Friday the 28th to Sunday the 30th of June, the "Ham Radio 96" exhibition takes place in Friedrichshafen, Germany. This is Europe's largest amateur radio show, and the RSGB will be present with a bookstall and membership information stand.

The Rotarians of Amateur Radio annual get-together also takes place from the 28th to 30th of June, at the Wessex Hotel in Street, Somerset. Ring 01332 675657 for further details.

Next Saturday, the 29th of June, the Speyside Repeater Group general sale takes place at the New Elgin Hall, Land Street in Elgin. Doors open at 12 noon, and for further details contact Tony, GM0WPI, on 01667 454436.

The Longleat Amateur Radio and Electronics Fair takes place next Sunday, the 30th of June, and not over the weekend of the 22nd and 23rd as listed in some publications. This event, in the grounds of Longleat House near Warminster in Wiltshire, features six large marquees with traders, and an RSGB bookstall and membership information stand. For further details contact Gordon, G0KGL, on 0117 9402950.

The Amateur Radio Caravan and Camping Club is holding at rally at Kimbolton in Cambridgeshire over the weekend of the 5th to 7th of July. Any amateur wishing to attend as a caravanner or tent camper is invited to send an SAE for details and a booking form to Alan Gard, G4LWA, whose address is correct in the RSGB Call Book. Booking forms must be returned by this coming Friday, the 28th of June. There is no trading at ARCC rallies. Alan's phone number is 01462 811208.

The Southend and District Radio Society is holding a radio and computer boot sale at its club headquarters in Southend on Sunday the 7th of July. For further details contact Alan Radley, G0TTM, whose address is correct in the RSGB Call Book.

Now news of two 6-metre beacons which are temporarily off the air:

GB3NHQ, which operates on 50.050MHz from RSGB headquarters at Potters Bar, was taken off the air on the 14th of June for routine preventative maintenance. It had been transmitting continuously for 12 years and is expected to be back on the air in mid July.

And GB3RMK, which operates on 50.060MHz from near Inverness is being closed down today, the 23rd, after 11 years of continuous service. The beacon transmitter is to be given a major overhaul and it is expected to be back on the air at the end of next month.

For further information on either of these stations, please contact the RSGB's VHF Beacon Co-ordinator, John Wilson, G3UUT, whose address is correct in the RSGB Call Book.

We know of no HF contests either today or next weekend.

Next some VHF contest news:

The RSGB 432MHz FM Contest takes place today, Sunday the 23rd of June, for four hours from 1800UTC. This is an ideal first contest for Novice operators, and the rules can be found in last September's RadCom.

The second of six sessions in the RSGB 10 Gigahertz Cumulative Contest takes place next Sunday, the 30th of June from 0900 to 2100 UTC. The rules can be found in the March 96 RadCom.

The Worked All Britain 144MHz QRP phone contest takes place next Sunday, the 30th of June, between 09 and 1800 UTC. There are sections for fixed, portable, mobile and SWLs. Full details are available from the new WAB Contest Manager, Graham Ridgway, G8UYD, whose address is 6 Rosewood Avenue, Blackburn, Lancashire. The postcode is BB1 9SZ. Please note that G8UYD's address is not correct in the Call Book.

And now the solar factual data for the period from the 10th to the 16th of June compiled by Neil Clarke, G0CAS:

Solar flux levels remained steady and averaged 68 units. The 90-day solar flux average on the 16th was 70 units. X-Ray flux levels remained at A1 throughout. Geomagnetic activity was "very quiet" every day and averaged Ap 4 units.

Now the ionospheric data for Central France for the period from 7th to the 13th of June. The F2 daytime highs averaged 6.9MHz and the darkness hour lows averaged 3.3MHz, although on the 12th they were down to 2.6MHz. The daytime highs took place between 1800 and 2100 every day and the darkness hour lows between 0300 and 0400 hours. Only five hours of blanketing E was reported at Meudon during this period.

And lastly the solar forecast. This week the quiet, spotless side of the sun will be looking our way. Solar activity is expected to continue at very low levels and solar flux levels are expected to be in the mid to high 60s. Geomagnetic activity is expected to be "quiet to unsettled" throughout. Ionospheric MUFs during daylight hours are expected to be

about 19MHz for the south and 16MHz for the north. The darkness hour lows are expected to be about 12MHz. The June Perseids meteor shower takes place between the 22nd and the 30th and peaks on the 26th. Sporadic E is about at its peak now and openings can be expected on most days.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa Foxtrot and M1 Alfa Bravo series, and Novice calls in the 2 0 Alfa Oscar and 2 1 Foxtrot Bravo series.

4094. This Week in Amateur Radio #169 (for air through 6/28/96)

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-22 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <hfHN8PQ.sanderman@delphi.com>
Source record: 222361

Here is a summary of news items covered on edition #169 of
"This Week in Amateur Radio", North America's most up-to-the-minute
audio bulletin service, for the week ending 28-Jun:
-
1. FCC Announces Opening of Next Vanity Call Sign Program Gate
2. Ham Astronauts Aboard Columbia Will be Calling "CQ Field Day"
3. ARRL Reviews Request for Medical Use of 1296 MHz Band
4. Special Event Station Calendar with George Bowen, N2LQS
5. Kenwood Defends Plan to Sell Ham Gear in CB Stores, Truck Stops
6. Wayne Green Incorporated Files for Bankruptcy, "73" Spared
7. Weekly Propagation Forecast with Cheryl Bowen, N2SBB
8. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
9. "The RAIN Dial-up" from Chicago
10. Mobile 5 Meter Pioneer, Dutch Microwave Contester - Both SK
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard each Saturday at 9:00 PM (EDT) and carried on VHF/UHF
repeaters throughout North America and on 160 meters at 1860 kHz.
Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
NOTICE: The service returns to satellite air this week through
facilities provided by the W0KIE Satellite Network. It will be
carried on Hughes Communications SBS-6 ("Ku" band), transponder 13B
upper. The transponder center frequency is 12.019 GHz. Affiliates
will need to tune up in frequency to 12.031 GHz. Program audio will
be on a 6.2 MHz analog subcarrier. SBS-6 is co-located with Galaxy
VI at 74 degrees west longitude. The move to "Ku" band (12 GHz)
will force some affiliates to retrofit their receiving systems.
Negotiations with a new "C" band (4 GHz) satellite carrier are still
in progress. Efforts are also being made to "simulcast" the service
on the Internet, but plans are incomplete at this time. All
affiliates are being notified by email, packet, or landline.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (email sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

>than likely be a General class or above than a Codeless tech.

This doesn't appear to be true. While the FCC has finally cracked down on one notorious HF amateur (by denying his license renewal based on an unrelated phone phreaking conviction), most of the NALs in recent times have gone for misbehavior at VHF or above. One recent case was an Extra jamming McDonalds communications in Texas and another infamous case was an Extra jamming HBO's satellite feed (remember that?). OTOH, the recent protracted jamming war on 3995 kHz, which generated a petition for rulemaking, resulted in no NALs issued by the FCC.

It would appear that the FCC does little policing of amateur band activity at all, but usually acts only when other services are affected. With the closure of the HF monitoring stations around the country, the FCC has little ability to monitor HF (and apparently an even smaller interest in doing so). The few remaining enforcement vans are used mainly for VHF and above DFing. And they roll only in cases where other services, including interfering with air traffic control in one recent case, are affected.

Many years ago, the FCC was a bit more diligent in patroling HF. In 1964 I got a notice (a warning) for running a rough note on 40m (I was running raw AC to the plates of a pair of 211s in push pull). But that hardly ever happens today. The FCC could write a thousand NALs an hour just by monitoring 75m any evening today (or 20m during any Dx contest), but they don't. The FCC concerns itself mainly with policing the more valuable spectrum above HF, and usually only then when it receives complaints from other services. And it is still the Morse speed tested amateur who garners the lion's share of the notices issued.

There is some statistical reason for that, there are still more
Morse speed tested amateurs, even at VHF and above, than there are
code test free amateurs. However, the burden of NALs does fall
disproportionately on the Extra Class, and they are still the
smallest amateur class. Perhaps Morse speed testing selects
preferentially for a certain personality type which is prone
to anti-social behavior. Or perhaps Morse speed tested amateurs
are just more active and hence more apt to be noticed. Whatever
the reason, they do get most of the NALs, and today most of those
NALs aren't for HF operation.

Actually, this is usenet. While more and more of usenet traffic is
being carried over the internet, a good bit of it still travels by
uucp (as all of it did only a few years ago), and a good bit of it
is handled by email list distributions, it is not the internet, and
it certainly isn't the web. Usenet is a cooperative of usenet sites,
similar in concept to other bbs systems with distribution links.
Today, many of those sites do their linking via internet services,
but that definitely doesn't make usenet and internet synonyms.

4098. Kenwood and Microsoft say ham radio dead

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-22 00:00:00 UTC
From: Burt Fisher <k1oik@ccsnet.com>
Message-ID: <31CBCD4B.751C@ccsnet.com>
Source record: 222365
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc

Kenwood and Microsoft agree ham radio is dying.
(but I told you that a long time ago)

KENWOOD DEFENDS DISTRIBUTION PLANS

Kenwood Communications Corp says its recently announced plans to make its products available in more retail outlets will help to rejuvenate ham radio. Citing concerns about the future of Amateur Radio and a changing business climate, Kenwood announced it was taking "some bold steps" to revamp its wholesale distribution scheme.

In a June 10 open letter to the Amateur Radio community, Kenwood's Amateur Radio Products Group National Sales Manager Paul Middleton, KD6NUH, painted a dismal picture. "When we looked at where Amateur Radio is today, and where it is going to be in ten years at the present rate of decline, the future looks bleak," he wrote, citing competition from unlicensed communications modes. (internet).

"It is also obvious that the rate of no-code licensees is slowing down with fewer and fewer people upgrading," Middleton wrote. "Amateur Radio dealers should be more interested in attracting new people to our hobby. Every current amateur operator who wants this hobby to continue should be promoting ham radio to non-hams."

* Microsoft Network (MSN) has dropped its Amateur Radio Forum, reports the unofficial forum manager Rick McMillion, WB7UGZ. He said MSN gave him the word recently in a terse e-mail message. McMillion says he had no warning that MSN was going to dump the forum.

>have seen the project in the 1994 ARRL Handbook, and think it might be a
>little too complicated to start with. Any help along these lines will
>be GREATLY appreciated.

The "standard" way to start out on 10 GHz has been with a pair of Gunnplexers. The cheap motion detector types (about $20) will work, though the Microwave Associates units are better. Advanced Receiver Research sells complete MA units, though they're a bit expensive (over $300 each). The major difference between the MA type and the motion detectors is that the former have a separate modulator varactor diode while the latter have to be modulated by varying the Gunn diode current. This allows the MA types to handle wider bandwidth modulations, such as video or high bandwidth data, while restricting the motion detector types to just voice or lower bandwidth data.

Due to the relatively poor frequency stability of Gunnplexers, WBFM with AFC is used. They are always setup in duplex links by offsetting one of the pair by the IF frequency from the other. Typically, 30 MHz has been chosen as the IF, so the two Gunnplexers will be offset 30 MHz from each other. However, the 10 GHz amateur band is wide (500 MHz), so a higher IF can be used. One cheap solution is to choose 100 MHz (or any other clear frequency in the FM broadcast band) as the IF and use a regular broadcast FM receiver as the IF.

One of the pair is allowed to free run while the other has the AFC voltage of the IF receiver brought out to drive its Gunnplexer. This forces the "slave" station to track the other station at the fixed IF offset. As I mentioned, operation is duplex. The Gunn source acts as both transmitter and LO for the station at the same time. This means you hear yourself as well as the other station in the IF receiver.

For modulation of the motion detector types, use an adjustable current regulator with the modulation superimposed on the adjustment terminal of the device. There are several 3-terminal regulators which can be used this way. For the MA types, just apply the modulation to the varactor diode. The hardest part of this project is combining the AFC voltage from the IF receiver of the slave station with the

modulation of the slave, and with a DC tuning voltage. An opamp summer works fine for this.

You do rough tuning of the units with their mechanical tuning screws, do fine tuning with the DC tuning voltage, then flip a switch to activate the AFC voltage on the slave when you hear the other station. That's it. The units should stay locked together from this point on and you should be able to work duplex. A more elegant method sweeps the DC tuning voltage until lock is achieved then transfers control of frequency automatically to the AFC.

Note, you need some way of measuring the 10 GHz frequency so that you stay inside the amateur band. A simple wavemeter is sufficient. You can make this (adapt a micrometer as the tuning plunger and scale), or scrounge one surplus, or borrow one from another amateur active on 10 GHz.

As a matter of curiosity, Is there a hope to find a QSO-partner
on 10GHz WBFM? When I finished my WBFM TRX 10 years
ago, it turned out that everyone else here had moved to SSB.

>make a right.

The folks who wrote the regs that you and I have to follow disagree with
you. If it's not an authorized transmission, then the FCC doesn't consider
that they're being interfered with. More than likely your local repeater has
a policy to ignore jammers and continue normal conversations, i.e., transmit
over the top of them. The FCC didn't consider that malicious interference,
either.

>By talking over top of that person you may only cause them to move to
>another amateur channel.

And the amateur moves with them. Maybe he hopes they'll think no matter
what frequency they move to someone will be there listening to them, and
they'll eventually go back to 11m.

>I don't know what the solution would be but I don't think that talking

> software three times a year, elsewhere in the world the poor Ham
> has a hard time being able to afford even a simple CW TX.

The evidence doesn't really support this. In most foreign countries, including those "rare" ones considered exotic Dx, any indigenious amateurs are very likely to be among the wealthy elites of the population, and very likely to own the latest Japanese equipment. For the poor of those countries, any form of amateur radio is simply not an option (for one thing they are unlikely to have the "connections" to get a license). For people living on $200 a year, there are more pressing needs than operating amateur radio.

Examine the pictures of foreign Dxer's shacks in QST or CQ. Most often they are very well equipped. And having been involved in the sales of the 56 kb RF modems, I can tell you that foreign sales have exceeded domestic sales. That tells me two things, foreign amateurs seem to have a greater interest in advanced technology than the much larger US market, and foreign amateurs can find the money to buy it. My on the air HF digital activity tends to confirm this. I've contacted over 200 countries on digital modes (real countries, not Dx rocks). If amateurs in those countries can't afford digital equipment, they sure do a convincing job of faking it.

This picture of the foreign amateur as being both poor and too stupid to do better than CW isn't very attractive. Some foreign amateurs may indeed be poor by our standards, but the ones I've contacted have also shown themselves to be quite resourceful. In particular, I've contacted

an Indonesian amateur who built his entire HF digital station from PTT castoffs. And I've worked an English milkmaid whose Oscar station is entirely homemade (England may not normally be considered a poor third world country, but a farmhand doesn't make much money by our standards.)

>- If a digital mode is not an option (ie, the other guy can do only
> phone or Morse), Morse cuts through more easily than phone.

True. But there are already more amateurs than you can contact in a lifetime who aren't in this situation.

>- Being able to read and write a foreign language is one thing, being
> able to speak it is another thing entirely (those who are bilingual
> have a good understanding of this). Apparently, it is very hard to
> learn to speak English, as it has no solid phonetic rules (or too
> many!!!).

True. That's a reason why text modes are better than voice. But *any* text mode will do, it doesn't have to be Morse. However, for the stylized contacts of many Dxers, the spoken English required is so limited that it poses much less of a problem for the non-English speaker than learning Morse *and* learning the stylized English phrases needed to be sent by Morse.

For those *with something to say*, knowledge of a common language is still required regardless of the mode used. English is the most common language used because the majority of the world's amateurs speak it as their first or second language, but Spanish, French, German, Japanese, and Russian are also common languages used on the radio. How many do you speak? I speak two of the above, and can get by in another. US amateurs would be better served increasing their language skills rather than concentrating on a text encoding method.

>If you're not interested in talking to foreigners, then why do you need
>HF, when you can use repeaters and Oscars and TNC's and PC's for
>all the local and national coverage?

To be blunt, you can't use those methods very effectively for continental coverage as yet. HF digital allows long haul relay that isn't practical with the sparse VHF terrestrial networks, and which isn't yet well served by satellite relay. Besides, HF is an interesting propagation medium with characteristics not found on VHF or UHF. It presents a different set of challenges to the modem and protocol designer than the primarily white noise environment of VHF/UHF.

>In my book, there is another advantage to CW. It is:
>
>- For the home brewer, tackling a CW TX is a much simpler entry point.
> If Morse were to disappear, how many adults (let alone kids) would
> even try to start building a digital based TX or RX? OK, maybe they
> can build just the RF part, but you still need the interface box and a
> computer for the rest of it.

And you need a few billion conditioned neurons for Morse. Ok, the neurons are homegrown, but the programing complexity is several orders of magnitude greater than even the most complex DSP TU. At least you *can* understand a hardware modem. To date, even the top neuroscientists don't understand the workings of the wetware modem.

>Anyway, hearing that faint Morse code coming out of the static and
>decoding it manually is infinitely more exciting than just reading text on
>the screen.

For *you*. That's not universally the case. To me, the excitement of seeing text spill forth on the screen from a signal too faint to hear is infinitely more satisfying. That's particularly so because it was my creation that was able to do it. Every time one of my digital designs works, I'm like the proud pappa watching his kid take his first steps.

Is naked eye astronomy more exciting than working with the Hubble Space Telescope? I don't think so. Tools amplify your capabilities, and good tools amplify them even more.

>Already, with the loss of Heathkit (of old), etc. there seems to be a
>dearth of kids trying to build things themselves (I have my pet theories
>for why this is so, but that's another subject entirely). Anything that
>discourages the remainder (and adults as well) is, IMO, counter-
>productive to the aim of advancing the art. Everyone needs to learn
>to walk before they run. They still stick a pencil in the hand of the
>child and show him how to write the alphabet. They still give the
>child fingerpaints and a piece of paper. Giving them Microsoft Word
>and Adobe Photoshop at the start will result in nothing.

Are you *sure* about that? Even now some kids are learning to type before they learn to write manually, and even now kids are using PC paint programs (and saving their parents from having to scrub crayon scrawls off the walls). In times past, a kid would be handed a hammer and chisel and pointed toward a rock in order to write, but times change, methods change, and I think mostly for the better.

>Do you give your child (or beginning adult) the parts to make a
>crystal or one transistor AM radio for his/her first project, or do you
>give the child a kit for a digital PLL FM receiver?

Such a FM receiver is only two chips today, hardly more complex than the AM radio from the constructor's point of view. But a crystal set or a one transistor AM radio still works as a teaching aid *because it doesn't require an artificial text encoding to be learned first* in order to be used. That makes it a better introduction because the child or beginning adult can concentrate on the *radio* aspect without simultaneously having to be concerned about rote conditioning to decipher an arcane encoding.

>A one tube CW TX with about 18 components (plus another 6 or so
>for the PSU) will get you up and running with 50 Watts on 40M and 80M.
>(just what I plan to build once I have the license). What would be the
>parts count and logistics attached to doing the same thing using one

>of the digital modes?

You forgot to include the billion neuron wetware modem whose workings
you don't even begin to understand. Contrasted to that, a box with
a few chips in it is simplicity itself. You might not know how it
works now, but at least you *can* learn how it works. You *can*
develop algorithms to improve its action based soundly on information
theory rather than hit or miss thrashing in the dark trying to improve
the unknown workings of the wetware modem. And you can communicate
your improvements to others, who can easily duplicate your work since
the behavior of hardware is predictable while the behavior of wetware
continues to be wildly variable.

Good tangible hardware is understandable, and much easier to deal
with than squishy wetware with uncertain wiring and poorly understood
components with uncertain specifications. The former is engineering,
the latter is voodoo, witchcraft, and snake dancing.

>Jeff KH2PZ/KH6

So, if every time I hear you on the air I fire up my RTTY station
and call CQ on top of you, and when you move to get away from the
interference I follow you and continue to call CQ on top of your
signals, that's not jamming, right? I don't think so. By following
the other stations, the intent to jam is clear.

The FCC may not care anymore, in fact they don't seem to care much
about anything we do *inside* our bands anymore, but what you
describe is intentional jamming. That the other stations were
assumed to be "freebanders" might make such jamming vigilante
action, and the FCC doesn't seem to care about that either, but
that makes it no less illegal.

If someone walks across your yard without permission and you shoot
them, then shoot them *again* when they run, you can't claim you
were just target practicing and they happened to get between you
and the target. The second shot shows *intent*.

From what I have read, the amateur radio service is up against some of the most skillful, crafty, rich, and powerful people in the U.S. on this issue. It would behoove us to better understand the technology that is being proposed to be dropped in our midst, the strength, weakness, agenda (both apparent and hidden), etc. In that regard I have found a good webb page that gives the history, background, and description of satellite constellation communication systems in general and l'leos specifically. The source is:

http://www.ee.surrey.ac.uk/Personal/L.Wood/constellations/

Come on, Gary. How many lives have you saved lately ? I'm not your
Congressman, nor do I work for the FCC. You don't have to use the
'service' line on me. The closest ham radio comes to being a service
is that it is self-serving. Some benighted souls get so engrossed in
thier hobbies that they confuse them with services or professsions.
Anybody who wants to save lives should join the volunteer fire
department and skip ham radio.

>antennas?

Hi Charles,

Consider yourself very lucky to live in the 'good ole US of A'. The powerlimit is 1.5 Kw if I'm not mistaken. Here in Belgium we have 150 Watts maximum power. I've been on HF since september 1994 so that means most of my operating is done with very little sunspots. I don't use my HF radio a lot but so far I've worked around 120 countries on 20 meter and up. I don't have antennas for 30,40, 80, 160 meter. On the other bands I use a Mosley TA-53M at 12 meter (36ft) AGL. I'm also using a TS-450SAT and output is typical 80-100 W. Besides this I made my first QSO on HF with a OD5 station when had a mismatched sloping dipole (pointing north) at 1 meter above the ground at the

lowest point and 10 meter at the highest.

I suggest to LISTEN on the bands and if you hear a strong signal you WILL work them. Did you know that people run QRP (less than 5 Watts) and work the world? Maybe you could try to put a vertical multiband on top of the apartment building? It may also be posible to run a wire to a tree or something and tuning it for minimum SWR. Best is to get the antenna OUTSIDE.
You can always make up the difference in signal strength with operating practice.

Listen on 14.306 (+- QRM) in 3 weeks time... you might work W6/ON4BAM/m or W7/ON4BAM/m.....

Nevertheless... have FUN on HF. That's what's important.

Just my 2 cents, Your mileage may vary
Opinions are my own (most of the time).

True. A stone axe still works in a world of chain saws. It just doesn't
work as well. It is only our insistence on demanding the universal mastery
of the knapping of a stone axe before allowing use of the chain saw which
makes us seem anachronistic.

CW is fun...CW is relaxing..CW is a great place to meet some outstanding
fellow hams....CW is the only mode I operate on HF...But this still does
not explain why CW should be a requirement for a ham license. And
probably someday..... Bill, W2BY

To measure the 10 GHz frequency, Set up the Gunnplexer to transmit
and measure the receive diode current. Put a sheet metal reflector
in front and move it towards and away from the Gunnplexer. You
should see the diode current go through minimum and maximum values.
The distance between minimum's is a half wave. If you move
the plate through many halfwaves you can average the measurements
and easily get into the 10GHz band.

I hope that description is clear.

Gary,

Are you comparing the stone axe to Morse code and the chain saw to modern modes of communications? If so, I believe a better analogy might be a more modern metal axe with wooden handle and the chain saw. I suspect that there are many people who own both a chain saw and an axe, and depending on the job that needs to be done, the chain saw and/or the axe might be selected. Which tool would work better if you ran out of fuel?

Certainly, Morse code is the oldest mode of electrical/electronic communicatons. But there will always be a place for it among the more modern modes of communicatons, simply because it works when others fail, whether its electronic or not. For example, I learned from a TV documentary on the Vietnam War that one of our pilots who was being held captive sent Morse code to the US during a propaganda video taping. How did he do it? By blinking his eyes! Other folks could probably come up with other examples where code was used when other means of communcations would have been impossible or impractical.

Best regards,
Lindsay

Well, gee, Frank, but I do call it the internet. So does the guy who
sends me a bill for using it every month. But sometimes in formal
conversations, I call it the 'information stupid highway, the biggest
waste of technology since packet radio'. Someone else called it 'A
twelve lane superhighway gridlocked with garbage trucks'.
Are you suggesting we go surfing, Frank ? Ever think maybe we
already did, and we found the home of the world's electronic con
artists ? Try getting off the chair in front of your computer and
discover the world. It's a whole lot more interesting than anything
you will find on the information stupid highway.

>http://www.ee.surrey.ac.uk/Personal/L.Wood/constellations/

I think what you have 'found' is a personal soap box for a whacko at
UOS. Speaking of 'hidden agendas', did't you think it rather strange
that someone who would put together a web page about satellites would
throw a 'F__K YOU' message in your face automatically every 60 seconds
while you were reading his web page? If you want anyone else to find
it, get the address right. I think it would behoove you to read the
story about Chicken Little. And it would also behoove you to
understand that if UPS, or Motorola, or Microsoft, or any other
megabucks company in the U.S. wants the ham bands, the ham bands are
as good as gone. That's how the world works, Clay, money talks and
hams walk.....

Please explain to us how hams, who can't put together enuff money to
fly one satellite, are going to fight a company that can put together
enuff money to fly 850 of them ? And please don't tell us we are
gonna go blow up satellite dishes, some moron already suggest that....

That's not a valid comparison, Roland. There are no restrictions on anything in the Philippines. Restrictions there have not been invented yet. There are more bootleggers on the ham bands in the PI then there are hams. Ham licenses are sold, not obtained thru testing. Canada is a bit more refined with their system, I would hope.

4130. A New License Class

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-22 00:00:00 UTC
From: Dave Cook W0EYA <dcook@mach3ww.com>
Message-ID: <31CC7ABE.7698@mach3ww.com>
Source record: 222397

Some people don't like a code portion of an examination for any current class of license so let's just dumb ourselves down to accomodate them and not have the code test any more.

The written exams are kind of hard, especially since everyone knows the types of questions and their answers ahead of time, they are really just a waste of time so let's just do away with a written exams also.

Now since we have a license class with no code exam, and no written exam, maybe we should give them a whole amateur band to themselves so they can talk to one another. Maybe we should make it a band that frequently has skip propagation so they can talk longer distances and display their intensive knowledge of electronics and everything else.

What kind of a name should we give this class? How about something like the "Citizen Band" to show that absolutely everyone can get a license, without regard for race, creed, religion, or even mentality.

Seems like its already been done!

(I write this, tongue in cheek, holding a Technician [plus?] license since 1958.)

I see your point, Dave. But the other day, I was chatting with
a nice kid who's a codeless Tech; he told me he had a 10-m rig in
his car and enjoyed listening to it, while he worked on learning
the code.

And I wondered to myself: What would be wrong with, say, opening
the Novice section of 10 meters up to codeless Techs? Maybe have
just one segment for Tech- and another for those who've passed the
5 wpm? It would let them use voice on HF, and maybe give them the
taste of HF fun. Equipment is cheap and available, and it would
wouldn't be giving them *much*, just maybe a hint ...

Just something I was thinking about; I *despise* the code/nocode
flame wars and don't want to start a new outbreak. It *does* strike
me, though, that it's not a bad thing to have more and more people
joining the hobby. FWIW. 73!

Have you been living in a hole that last couple of weeks? This isn't about ham-to-ham interference; rather, it concerns unathorized transmissions within 10m, and as such, interference (malicious or otherwise) to these folks is not taking place (according to the FCC).

What did you do a couple decades ago when the "Russian Woodpecker" invaded HF? Cease all transmission so as to not interfere with it?

>If someone walks across your yard without permission and you shoot

Greg, I don't know your trx (model FT 736 R , from Yaesu) ,but if it
is also suitable for 13.8 DC operation ,it might be best to use a
separate linear PSU (back to basics) . Switch mode PSUs are light
and compact and probably cheap , but when not 100% (although working)
can cause a lot of problems.
Best regards

This is a fine amp when used with a pulser and a peak reading watt meter
to tune it up. I use one to tune the SB-220 I have.

->It uses 4 6JE6C television sweep tubes in parallel. Typical operation
->is about 1000vdc at 750-800ma. on the plates with 100 watts of drive.
->If you see about 650 watts of CW output, it is working about normal.
->BE AWARE of the following,
->don't key down for more than about three seconds at a time while
->tuning, it will surely damage the tubes!
->The amp should draw no more than about 90ma. at idle with no rf input,
->if it draws more, the tube life will be short and it will be prone to
->melt downs. You may need to add some normal diodes to the bias zener
->to throttle the idle current down.

Cross-posted to: comp.multimedia,rec.radio.amateur.misc,rec.radio.amateur.packet,rec.radio.amateur.policy,rec.radio.swap,rec.radio.cb,rec.radio.shortwave,alt.online-service,alt.irc,alt.bbs.lists,rec.audio,rec.video,

Thank you for reading and considering this happy request...

Our boy, Parker Douglas, was born on June 20th at 2:17 pm.
He is a happy, strong blond haired kid with a twinkle in his eye
and a snap in his step (or cry). He has a bright future also Iï¿½m
told when I prey for him at night.

SPECIAL REQUEST: Could you be so kind as to find the front
cover or page from Thursday, June 20thï¿½s newspaper and mail us a copy?
Be sure to sign it with your NAME, CITY & STATE AND COUNTRY.
It may be alot to ask, but it would be so nice of you to help with this.

If you have a couple of Email pals from around the world, please forward
this to them. The more remote and unusual the better.

I plan on presenting them to him when he is old enough to appreciate
how nice people around the world can be. How complete strangers
from acroos the world saluted his birthday in this small way.

This small but meaningful request will be remembered for generations
to come, and I thank you if you want to be a part of it.

May my son and you be always blessed.

Parker Douglas
20506 Riverside Pines
Humble, Texas 77346
United States of America

THANK YOU VERY MUCH!

P. S. If you find this an intrusion, I apologize. Sometimes I think
people on the net are far to serious--but I appreciate your right to
privacy.

Most of the Web databases list out daily activity (UALR, QRZ) and you don't know easily which is just an upgarde/renewal from a vanity call assignment. KI4HN reads the FCC database accessed by FTP and gives you the option of looking at all calls by individual date or the entire list to date. You get new and old call Look on his homepage at:

http://www.webbuild.com/~ki4hn/

In this post, I may be rehashing some of my earlier points, but the discussions preceeding this may have brought them more into focus (for me, at least).

There seem to be two sub-threads running through this whole thing, namely one questioning the need to mandate Morse and one wanting to make Morse obselete.

While I am as much against government interference as the next guy, I have a hard time objecting to the requirement to learn something that is easy and has been useful in the past (and is still useful, IMO, for the reasons given below). Again, I must point out, it takes more time for me to respond to these posts than it does to do a Morse drill.

Gary's own arithmetic points out that Morse is more or less equivalent to SSB phone in spectral efficiency (while both are much less efficient than his various digital modes). But here's the rub, more people in the world are able to communicate with you via Morse than with any other mode, phone included. It is the simplest mode and brings into the realm of contact possibilities many more foreigners than any other mode for the following reasons:

- As Gary has mentioned already, digital modes come and go (re RTTY). What is today's hottest mode may be tomorrow's obsolete trash. Morse, on the other hand, is everywhere on HF and has been there for a long time. Thus, there is quite a world wide investment in the necessary equipment. While we might be able to afford to go out and buy the latest TNC or equivalent and upgrade with the latest software three times a year, elsewhere in the world the poor Ham has a hard time being able to afford even a simple CW TX.

- If a digital mode is not an option (ie, the other guy can do only phone or Morse), Morse cuts through more easily than phone.

- Being able to read and write a foreign language is one thing, being able to speak it is another thing entirely (those who are bilingual have a good understanding of this). Apparently, it is very hard to learn to speak English, as it has no solid phonetic rules (or too many!!!).

If you're not interested in talking to foreigners, then why do you need HF, when you can use repeaters and Oscars and TNC's and PC's for all the local and national coverage?

In my book, there is another advantage to CW. It is:

- For the home brewer, tackling a CW TX is a much simpler entry point. If Morse were to disappear, how many adults (let alone kids) would even try to start building a digital based TX or RX? OK, maybe they can build just the RF part, but you still need the interface box and a computer for the rest of it. You're not up and running once the carrier goes out, you have the usual PC quirks, interface problems, software problems, etc. Besides, the project went from one with a large percentage of it being home grown to one where the constructor's effort is little more than a tack-on.

Anyway, hearing that faint Morse code coming out of the static and decoding it manually is infinitely more exciting than just reading text on the screen. I can see it now, "look son, there's a message on my screen!". The kid looks and says, "so, why's that different to all the other messages on your screen?" It's just not the same (my day job is development of OS modules, device drivers, microcontrollers and firmware, so maybe I'm a little jaded on digital modes).

Already, with the loss of Heathkit (of old), etc. there seems to be a dearth of kids trying to build things themselves (I have my pet theories for why this is so, but that's another subject entirely). Anything that discourages the remainder (and adults as well) is, IMO, counter-productive to the aim of advancing the art. Everyone needs to learn to walk before they run. They still stick a pencil in the hand of the child and show him how to write the alphabet. They still give the child fingerpaints and a piece of paper. Giving them Microsoft Word and Adobe Photoshop at the start will result in nothing.

Do you give your child (or beginning adult) the parts to make a crystal or one transistor AM radio for his/her first project, or do you give the child a kit for a digital PLL FM receiver?

A one tube CW TX with about 18 components (plus another 6 or so for the PSU) will get you up and running with 50 Watts on 40M and 80M. (just what I plan to build once I have the license). What would be the parts count and logistics attached to doing the same thing using one of the digital modes?

IMO, A person building the simplest device from scratch learns far more, has deeper insight and enjoys it much more than someone buying the most complicated device. So let's not discourage them by by making the simple modes obselete. How many times is it that the person starting with that simple shoestring device goes on to create something truly groundbreaking later? However, I'm wandering off topic at this point.

Should these reasons be enough for the government to mandate Morse? Perhaps not. But it is easy and, for foreign communication, useful or necessary. So why not learn it? Like someone else said, the real techs he knows just knuckle down and learn Morse, so they can get on with it. It'll take more effort to eradicate it than it will to

learn it. And if you do eradicate the Morse requirement instead of learning it, what will you have achieved?

So yes, despite on person's snide remark to the contrary, I believe learning Morse will broaden the mind in one way or another.

Tear me up all you like from here, I'm won't repond to this thread anymore - I have a CW TX design on which to work.

Cheers,

Chris.

It was reported in the Phoneix Newspaper and by the Television and Radio Stations that someone has been stealing radios from Fire department equipment that has responsed to fires or other emergencies. So far, it has been reported that the losses are in excess of $20,000 There have also been some fake fire and police calls. Most recently, a fake officer down call was broadcast that sent police units from all over the city scrambling to the area indicated in the fake call.

Anyone with info on this should contact The Phoenix Police Department or your nearest local Police department.

It's a serious crime to broadcast fake or fraudulent distress signals... whoever is doing this should be hung out to dry!!

Gee. And I thought it was the equipment manufacturers who were the
driving force in ham radio today.

I wonder what would happen if these manufacturers expanded their
product lines to more than 2m and 70cm nbfm radios with differing
face plates?

As we all know how beneficial the practical knowledge gained through
amateur radio is, perhaps companies like Microsoft are purposely
trying to murder 'our hobby' so as to minimize competition in the
future wireless world by limiting the ability of future engineers and
technicians from gaining self-taught, practical experiences.

Most of it is Junk- hence the name- MFJ:
Mighty Fine Junk

I'd much prefer to spend a little time and make a homebuilt tuner. If you do get MFJ, get the ham handbook out, and a lot of tools, because that MFJ device is going to need a lot of work.

Jim,

Not to take anything away from the wonderful job that many volunteer organizations do for public safety (which does include amateur radio). However, amateur radio is SO much more than just saving lives in order to fulfill a service. There such things as weather watches, public services in events (MS society use hams in some of its functions). Not to mention supplying "backup" communications in times of disasters.

Is amateur radio a hobby...yes and no. In order to prepare ourselves, our equipment must be checked, procedures tested, people trained. The best way of doing all these thing is to use your equipment and skill at all times. Therefore, after a while it does appear to be a hobby since all that we appear to be doing is taking with each other. However, in reality we are just preparing for the day when we might be call on to provide assistance.

Yes, there some hams that do take themselves to seriously...name me a hobby that does not have these. However, on the whole I have found hams to be willing to share their information and enthusiasm with people would are interested. Those people not interested in this service/hobby should not be bothered. Not because we are snobs but rather it is the correct and polite think to do (IMHO).

Not all of use can become volunteer fire fighters, but still wish to serve the public. There are many ways that this may be done...amateur radio is just ONE of those ways.

For Sale

1: An Icom IC-T22A FM Transceiver in mint shape. It should be in mint shape because I bought it about 3 weeks ago for a purpose that is no longer needed. Still has it's box and manual and Icom's warranty.

2: An Astron RS4A Power Supply also 3 weeks old and in just as great shape.

Both for $250.00

If interested please e-mail dapence@dapence.com

Thanks

If I try to use my old DX-440 with batteries it seems to power down (takes a few seconds). The LED slowly just fades away after I hit the power button. Acts as if the batteries are dead. I have replaced both the "D" cells and the "AA" cells. AC adapter works fine (though it has that "buzz" DX-390 owners are currently discussing on this NG). I have broken it apart but can find no obvious problem. Any suggestions?? Feel free to e-mail me direct if you think you can help.

By the way...If you need a manual for one of Rat. Shacks radios they have them available at their Web site for downloading. Can't remember the web address but a search will bring it up.

No, I meant stone axe. You buy a modern steel axe off the rack at the
corner hardware store just the same as you do the chainsaw, but you
have to knap your own stone axe, and that's an appropriate analogy to
Morse. You have to knap your own modem out of wetware. You get to take
no advantage of the leverage of modern technology or division of labor
or engineering experience, you have to fall back to the level of Og
the caveman.

A modern steel axe or a chainsaw are the products of generations of
engineering refinement and knowledge, the result of the efforts of
hundreds or thousands of people backed by the power of the industrial
age. But conditioning a wetware modem isn't. You don't get to expand
your reach by standing on the shoulders of giants. Rather, you are
reduced to the level of the stone age flint chipper in producing
your tool. So it is no surprise that it isn't a very keen tool.

And it is a brittle tool as well, subject to failure points you
don't even understand because you have no understanding of its internal
stresses and weaknesses. You haven't been producing and field testing
that model of stone axe for decades. It's your very first one, just
like Og's stone axe was his first one. You can't pull down your
trusty copy of Machinery's Handbook and read out the specifications
of the material you are using, it is just the piece of rock you happen
to have between your ears. Its cleavage planes aren't exactly like anyone
else's, so you can't use their experiences as a trustworthy guide.
You have to proceed by guess and by feel and hope the result won't

shatter against the first knot you encounter.

Kenwood and Microsoft agree ham radio is dying.
(but I told you that a long time ago)

KENWOOD DEFENDS DISTRIBUTION PLANS

Kenwood Communications Corp says its recently announced plans to make its products available in more retail outlets will help to rejuvenate ham radio. Citing concerns about the future of Amateur Radio and a changing business climate, Kenwood announced it was taking "some bold steps" to revamp its wholesale distribution scheme.

In a June 10 open letter to the Amateur Radio community, Kenwood's Amateur Radio Products Group National Sales Manager Paul Middleton, KD6NUH, painted a dismal picture. "When we looked at where Amateur Radio is today, and where it is going to be in ten years at the present rate of decline, the future looks bleak," he wrote, citing competition from unlicensed communications modes. (internet).

"It is also obvious that the rate of no-code licensees is slowing down with fewer and fewer people upgrading," Middleton wrote. "Amateur Radio dealers should be more interested in attracting new people to our hobby. Every current amateur operator who wants this hobby to continue should be promoting ham radio to non-hams."

* Microsoft Network (MSN) has dropped its Amateur Radio Forum, reports the unofficial forum manager Rick McMillion, WB7UGZ. He said MSN gave him the word recently in a terse e-mail message. McMillion says he had no warning that MSN was going to dump the forum.

This this is fragmented over several available versions of digital operation.
CW is still much more universal, which is why there is resistance to getting
away from it as the prefered "digital" method of emergency operating
on HF. Which is also probably why this particular group is still opposed
to removal of morse testing.

Throughputs range from 6 to 40
> char/sec, or roughly 72 to 480 WPM, well above the capabilities of
> Morse users. And they can operate at CNRs where most Morse users give
> up. Perhaps for casual operation. Where the message has some importance,
the operator will hang right in there. Actually, I don't know that
it has actually ever been quantified as to how tough the situation has
to be before an experienced operator will give up. It would be
interesting to know.

While voice, at 120 WPM, is faster than Morse, some of the newer
> digital methods put voice operation to shame while consuming considerably
> less bandwidth.

This is quite true. PACTOR II is one of the latest and very best examples.
But again, how wide-spread will it's usage be? How long before something
else comes along that is newer-bigger-better? This is where some of the
Morse testing proponents can make a good point. Morse is fully developed
and will not see further evolution - again, we are getting back to the
emergency operations senario. And yes, I know that actual CW usage during
the aftermath of a disaater isn't the major mode - especially in the
affected area, where VHF (and up) FM voice rules the roost.

Truth is, packet would be a much better way to go, but, not
everybody has packet equipment yet. Further, many more do not have
a portable set-up. We are currently facing this dilema here in my area.
We want to implement some sort of packet program
into our emergency plan, but have to admit that there aren't enough
local hams with portable packet stations. So, FM voice, wins again
by default. Some day though. . . . .

If Morse is on welfare, it is our own doing. The mode will percieved by the
image we project for it. And while there are those who may learn it for
nostalgia. In my experience, when properly presented, Morse is then something
that is WANTED. It also makes the learning process much easier.

> One useful measure of spectral efficiency is information content per unit

> Clover fits in a 500 Hz bandwidth and has a speed equivalent to 480 WPM,
> so its Q is 0.96. Which one do you think is more spectrally efficient?
> Which is the least spectrally efficient?

Actually, the usable bandwidth can be much smaller than this. As you mention
below, part of the signal is cut off on receive, but it isn't necessary to have 100%
to maintain 100% intelligibility. A worthwhile trade off to improve
system gain.
>
> Note: You can copy Morse with a narrower filter than 400 Hz, but you
> are clipping off part of the transmitted signal when you do. That

> carrier. That's inherent due to the sidebands generated by the
> keying shaping.

Yes, but evey form of "channelization" has a guard band requirement
for this reaso. Although there isn't such a thing on amateur HF,
it is inherent in the way we operate - for the most part.

Use square shaping and the key clicks spread over
> tens of kilohertz (theoretically over an infinite bandwidth) causing
> interference to other users.

I must admit to having very mixed feelings about a morse test.
You can argue a bunch of different points on either side of the fence.
Some more legitimate than others.

At times, I would argue to keep the test as morse can be looked at as
a basic simple digital mode, which can be implemented at will.

On the other hand, there is the point that no other mode has
such a requirement. And this point can be argued as to the why's

and why-nots of it's merits. I do see a day soon when the
international treaty requirment is dropped and then I suspect the
FCC will indeed drop the testing requirement.

There is a direct lifesaving aspect to the service, though that is
not primarily what I meant. I have had occasion to do just that,
however, when a trucker ran off the road, tore up 100 yards of
guard rail and was impaled by a piece of it in his cab. It was
late, there was no other traffic, and if I hadn't come along right
after it happened and called the rescue squad, there's a very good
chance he would have died.

But our service encompasses much more than that. Sticking only
with the public service aspect for a moment, there are the
thousands of messages and phone patches I handled for our
servicemen during the Vietnam War. Now few of those were directly
life and death, but they were surely important to the people
for whom they were made. That was of value to my community and
nation (helped the morale of our troops if nothing else).

But if you think our designation as a service only encompasses
emergency messages or health and welfare messages, then you

are sadly mistaken. Our service has four distinct charter purposes.

Every time I chat with a foreign amateur, I mean really converse with them not just try to extract a postal card in order to count coup, I do my tiny bit to increase international goodwill as required by our service's charter.

Every time I get a new circuit working, and share the results with others, I do my tiny bit toward the self-training and advancement of the art our service's charter requires. In fact, every time I can answer a question on the air, I do a little bit to help the self-training and advancement of the art aspects of the service.

This is a service our nation expects from amateurs, to increase the general technical literacy and skills of our numbers. That's important to the nation because we live in a technological age, and the more persons in the population who gain a working grasp of some of that technology, the better we can function as a nation.

And every time I log onto the packet network, or fire up the HF rig on 20m, I serve as a test load on the system, stressing it. Dr. Rohde credits amateurs with the improvement found in military and commercial receivers because only the amateur bands routinely put the sort of stress on the strong signal handling and selectivity of those receivers that the military would face in wartime.

We're the world's largest beta test organization for communications systems, and we not only do it for free, we pay for the privilege of doing so out of our own pockets. Because we are demanding, and have some technical skill and knowledge, we quickly identify flaws in equipment offered to us, and if we don't come up with fixes ourselves, we spur the manufacturers to do so thanks to the competitive marketplace.

No other radio service can duplicate those things to the degree which we do as amateurs. That we don't have to be paid to do it, and that we actually *enjoy* doing it in many cases, is just gravy. Bird watchers and stamp collectors don't provide those sorts of services to their nation or their communities. They just fill idle time with their activities. If that's all you do in amateur radio, then you are indeed not providing a service, and probably should be collecting stamps instead of occupying valuable spectrum.

Oh, and I *have* been a volunteer fireman too, and a member of the rescue squad, not that those activities are related to amateur radio in any way except as other services to the community. We all have a responsibility as citizens to try to make a difference, to improve our communities and our nation. Sometimes we do that through direct actions, and sometimes we do that merely by improving ourselves. The latter often receives far too little recognition as being

of value to the community and nation. Every little drop
of water contributes to the flow of the river.

Yep. Maybe some day I'll work a REAL FT5W on 40 CW!

Not only that, but there are very frequently "intruders" into the bands who are operating CW. I've heard a few just recently on 80, 40 and 20 meters (20 seems to get most of them now).

>
>one can't jam a bootlegger as they are illegal and we are not!
>steve

When you generate malicious interference, for whatever reason or
aimed at whatever target, you are no longer legal. It is a matter
of intent. If you try to communicate with another legitimate station
through noise (and you can treat a bootlegger as noise for this
purpose since he is not an authorized signal and thus not engaged
in legitimate communications), you aren't jamming. But when you
chase the bootlegger across the band, you've demonstrated that
your intent is no longer that of legitimately trying to communicate
with an authorized station. You've demonstrated an intent to jam.
It is the intent which makes it malicious, and thus illegal, whatever
its target.

That's why you can continue a QSO by transmiting over a bootlegger
on a repeater and not be jamming. Your *intent* is to communicate
with another authorized station. But if you chased the bootlegger
from repeater to repeater and just keyed over him *because he was
there*, your intent would then be demonstrated to be that of malicious
interference and it no longer matters that your quarry is himself
illegitimate. Violations by others don't excuse your own violations.

This could actually be good news for the community. Infusion of the Internet into our society may eliminate those who viewed amatuer radio as another form of CB. Once that crowd leaves the airways amatuer radio may return to the civil, and critical, service it was intended to be.

Gary,

I think we're looking at it from different perspectives. I believe you're talking about the evolution of a technology, while I'm simply conveying the relative effectiveness of the tools. The steel axe (Morse code, especially as CW) and the chain saw (SSB, digital, etc) are both useful tools depending on the job to be undertaken. Even though the steel axe was developed long before the chain saw, it continues to be used today because of its attributes as a cutting or chopping tool. I suspect that, while lumberjacks cut trees with chainsaws, a good steel axe complements their toolbox.

From my perspective the drums or smoke signals would be analogous to the stone axe, since they are among the most primitive means of "long-distance" communication.

Best regards,
Lindsay

SB DX @ WW $OPDX.259
Ohio/Penn DX Bulletin No. 259

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 259
BID: $OPDX.259
June 24, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N4CBR, W4MWT, N5OGP, AA6DC, WA6BXH, K8AE/7, DF4RD, DL7VOA, DL9GOA & DX News Letter, EI2GX G4BUE & DX News Sheet, I1JQJ, IK2MRZ, PA3EZL, PS7AB, SQ6CWP/SM6RXS and VK6LC for the following DX information.

1996 SEANET CONVENTION. The 1996 SEANET Convention will be held November 22, 23 and 24th in Madras, India. All are welcome to attend. For further information send a request to: VU2GJR, Gaja, PO Box 1127, Madras, India 600010 or E-mail to: seanet96@indiagate.com

7O, YEMEN. Geraldo, IK8JAF, is now aactive from San'a as 7O1JAF. He is there on business and will be there for approximately one month, but is likely to return to Yemen in October. Geraldo is reportedly using dipoles and 100 watts and plans to be active most Thursdays and Fridays starting at 1600z between 14200 and 14220 kHz and from 2000z on 7075 kHz (or whenever his business commitments leave him free time). Also, Geraldo has been heard on 3799 kHz around 2135z. He is active on SSB only and presently he cannot work split (he does not like pile-ups). QSL via his homecall: P.O. Box 230, 84091 Battipaglia - SA.

9M6, EAST MALAYSIA. The DX News Sheets report Tony, G0OPB, will be active July 25-28th, including participation in the IOTA Contest (OC-133), and possibly August 2-4th August as 9M6/G0OPB (to be confirmed). Outside these periods he will be active from the 9M6 mainland. QSL to home call.

9N, NEPAL. Just a REMINDER! By the time you read this Brad/KV5V and his XYL Patricia/KB5KVV will be in Kathmandu operating from 9N1ARB's and 9N1RHM's QTH (using their callsigns). Brad stated he is going to try to spend most of his operating time on CW and RTTY (CW being his preferred mode), because Dick and Rich (9N1ARB and 9N1RHM) work phone almost daily. Brad also reports that Dick and Rich will be active on RTTY and HF Packet when he leaves because he brought the materials which are needed to get their PK232MBX's going. Brad's operating day starts on phone and then

he will switch to CW or RTTY after announcing frequencies and times. Operation will only be on 20 meters and he will be on the air daily, Sunday through Thursday, U.S. time (Whitewater rafting on Friday and Saturday, local time in Nepal!). QSL both callsigns to KV5V.

9Q, ZAIRE. This may be your last week to work Piero, IK2BHX, who is currently active as 9Q5HX until the end of June. He is active on SSB/CW mainly on 18, 14 and 10 MHz. QSL via IK2MRZ.

A5, BHUTAN. It was reported that the Inside DX reports Barry, ZS1FJ, has applied for permission to be active in January/February 1997. (ed. I hope so!)

A6, UNITED ARAB EMIRATES (UAE). David, AA6DC, who was recently here and was active as/from A61AF, A61AN and A61AH QTHs, may return in 3 or 4 months with a CW keyer to please many CW operators.

BRAZIL DX NET. Rony, PS7AB, reports there is a change in the time and location of the Brazilian DX Net. Net is now on Saturday and Sunday on 14222 kHz at 1900-2100z.

CY0, SABLE ISLAND. CY0AA has been very active and will continue to be active until July 3rd. During the Field Day weekend, this group seemed to concentrate on 6 meter and the WARC bands (not FD). Refer to OPDX.257 for more details on their operations.

FT5W, CROZET ISLAND. Sandy, WA6BXH, reports Samuel, FT5WE, has been QRT since May 30th until June 21st due to various antenna problems. Samuel has just recently received and installed a new Cushcraft AP8A vertical and Amertron AL-80B amplifier. He will also be installing a dipole for use on 75 meters SSB. Samuel generally prefers to operate CW up 5 KHz from the bottom of the band. On 30 meters, he prefers 10108 kHz. He plans to be active on 80 meters CW on 3505 kHz around 1400z. Later, he plans to put up a dipole for 75 meters SSB. On 40 meters SSB, he likes 7045 kHz and does listen up for the USA. Please note that his QSL manager is F5GTW.

GW, WALES (UPDATE). Last week we reported that the WestNet DX Group (now in conjunction with the ADX CSG) would be active from IOTA EU-124 during the IOTA contest. The group has announced that they have been issued the special contest callsign GW6J. This call will be used for the first time in this year's IOTA contest as the group operates from YNYS MON (the Island of Anglesey). The team will comprise of operators from GW, EI, GI and GD. QSLs will be handled by GW4VEQ and all stations appearing in the log will get a card via the bureau.

HB0, LIECHTENSTEIN. Between July 7-16th, a team of 6 operators, all members of the Eindhoven Student Radio Amateur Club (ESRAC), will stay at the mountain restaurant in Malbun Liechtenstein some 2010 meters above sea level. The callsign to be used is HB0/PI4TUE. Activity is planned on the following bands: HF (160-10 meters including the WARC bands, running two stations), VHF (6-2 meters) and UHF (70 cm and possibly 23 cm). Modes of operations will be SSB, CW, RTTY and PACKET. Operators

include: PA3EZL/Aurelio, PA3FXW/Robert, PA3GFE/Martijn, PE1NEX/Johan, PE1NVK/Michel, and PE1PRG/Jons. Any last minute details will be put on the ESRAC's home page: http://www.esrac.ele.tue.nl

HK0, MALPELO ISLAND. DXNS states that Bert, HK5JPS, said at Dayton's HamVention that a group of HKs are planning an operation next February.

KH4, MIDWAY ISLAND. An international team of operators including members of the Central Arizona DX Association announced plans to conduct a Multi/Multi style DXpedition to Midway Island the first part of August, 1996. The group plans to operate on all bands and will concentrate on CW, SSB and RTTY. As with prior operations to Midway, there will be special emphasis on accommodating EU and AF. Frank Smith, AH0W/OH2LVG, who is heading up this effort, will have more details in the next few weeks. QSL route will be KE7LZ.

NEW DX WEB-SITES......
JA6IMJ announced on the Internet that a new Japanese DX Web Cluster is available at: http://www.big.or.jp/ham/dx.html

The WEB page for the South Sandwich Island DX Group is now up and running. The URL is: http://ocean.st.usm.edu/gejones/ssidxghp.html

The Oklahoma DX Association announces the OKDXA WWW Site. Please point your web browser to: http://www.pcok.com/n5ogp/okdxa/

OY, FAROE ISLAND. Greg, SQ6CWP (CW operator) and Mario, SP6OJG (SSB operator) will be active from from June 27th to July 9th as OY/SM6RXS. They plan to have two stations active on all bands including the WARC bands. Suggested frequencies (SSB/CW): 3780/3505, 7080/7005, 14240/14001 and 21240/21001 kHz. Activity on the WARC bands depends on conditions. A nice full color QSL card will be avalible via bureau or direct to: Greg Rybczynski, Hagmarksv. 18, 448 33 Floda, Poland.

PALESTINE (Gaza Strip). Yoshi/JA1UT, Ray/G3NOM, and others were (or still are) active as ZC6/KH2Y and ZC6/G3NOM this past week. Reportedly, they are there to deliver HF, VHF and UHF radios to the Ministry of Communications and Ministry of Health plus train local operators to use them for emergency communications.

VK6, SHOLL ISLAND (Australia). Mal/VK6LC, Terry/VK6VS and Dave/VK6DLB will be operating from IOTA OC-140 from June 23rd to July 6th. Sholl is located in the Western Australia State (N.W. COAST) Group in the Indian Ocean (Zone 29). Sholl Island is part of the Passage Islands (a group of 8 islands). Callsign to be VK6ILS and activity will be on 80-15 meters. Suggested frequencies are: 3799, 7042-7045 (N.A. 7165, 7185 and 7278), 14260 and 21260 kHz. QSL via I1HYW, Gianni Varetto, P.O.Box 1, 10060 Pancalieri, Torino, Italy.

ZS8, MARION ISLAND (Long path opening!). It has been reported that East Coast USA wanting to work Chris, ZS8IR, may want to check 20 meters longpath in the mornings around 1145z. Chris was heard calling "CQ outside JA" and had very few takers on 14195 listening 14200 kHz and up.

>away from it as the prefered "digital" method of emergency operating
>on HF. Which is also probably why this particular group is still opposed
>to removal of morse testing.

Yeah, that is the one claim to fame of Morse today, universal
interoperability. But I'd suggest that's a historical artifact
of current regulations. It would be just as easy to craft regulations
placing some other method in the universal slot, if the regulators find
universal interoperability a necessary condition of amateur usage.
They apparently do not, however, because they don't require us to
maintain a Morse capability once we are licensed.

>Throughputs range from 6 to 40
>> char/sec, or roughly 72 to 480 WPM, well above the capabilities of

>the operator will hang right in there. Actually, I don't know that
>it has actually ever been quantified as to how tough the situation has
>to be before an experienced operator will give up. It would be
>interesting to know.

More to the point, how many are truly *experinenced* operators?
(Survey says, less than half, and there goes your universal
interoperability under emergency conditions.) And how long is
too long to hang in there? According to FEMA, even AMTOR is too
slow to trust for emergency situations where the information is
almost always time critical, and where absolute accuracy is often
essential. Note that PACTOR II claims to be able to function
with a CNR of -15 db. That's below the threshold of audibility
for a Morse signal, so in that case it wouldn't matter how long
even an experienced Morse operator hung in there.

>While voice, at 120 WPM, is faster than Morse, some of the newer
>> digital methods put voice operation to shame while consuming considerably
>> less bandwidth.
>
>This is quite true. PACTOR II is one of the latest and very best examples.

>emergency operations senario. And yes, I know that actual CW usage during
>the aftermath of a disaater isn't the major mode - especially in the
>affected area, where VHF (and up) FM voice rules the roost.

That's correct, Morse usage in real disaster situations is practically
(if not totally) non-existent. And addressing the other point, almost
all of the boxes implementing newer protocols have fallbacks to more
mature methods (usually all the way down to RTTY). And even RTTY usually
offers better performance than Morse. My P-38 can copy RTTY down to levels
where I couldn't copy Morse, certainly not 60 WPM Morse.

(Note I don't claim to be a great Morse operator, but I did handle lots
of NTS traffic on Morse at one point so I'm probably more skilled than a
lot of HF amateurs.)

>Truth is, packet would be a much better way to go, but, not
>everybody has packet equipment yet. Further, many more do not have
>a portable set-up. We are currently facing this dilema here in my area.
>We want to implement some sort of packet program
>into our emergency plan, but have to admit that there aren't enough
>local hams with portable packet stations. So, FM voice, wins again
>by default. Some day though. . . . .

VHF/UHF packet certainly can play a role in disaster communications,
and has been used for logistic support in that role by a number of
groups. But HF packet? Forget that, its a lost cause. We're going
to have to reinvent packet to make it work usefully on HF. (That's
an interesting challenge, of course, and something we should be
working on.)

>>>A couple of people suggested that the proposed HF no-coders would learn Morse
>>>once they encountered the congestion. Of this I am skeptical,
>>
>> I don't think so either. There are much superior non-voice methods
>> available than manual Morse. Morse is a mode on welfare, requiring

>
>If Morse is on welfare, it is our own doing. The mode will percieved by the
>image we project for it. And while there are those who may learn it for
>nostalgia. In my experience, when properly presented, Morse is then something
>that is WANTED. It also makes the learning process much easier.

Yes, you catch more flies with honey than with vinegar (and that's why many of the Morse proponents are doing Morse a great disservice by claiming it is an "effort" test). When Morse is seen as something useful, rather than as an obstacle, people are more willing to want to use it. And of course, to use it, they find that they have to learn it. But I think that if people look at the various options open to them today objectively, many of them will be more likely to want to use something better than manual Morse.

>> Note: You can copy Morse with a narrower filter than 400 Hz, but you
>> are clipping off part of the transmitted signal when you do. That
>> signal still spills over onto other users within +/- 200 Hz of the
>> carrier. That's inherent due to the sidebands generated by the
>> keying shaping.
>
>Yes, but evey form of "channelization" has a guard band requirement
>for this reaso. Although there isn't such a thing on amateur HF,
>it is inherent in the way we operate - for the most part.

No, for example Clover has a very sharp cutoff characteristic and is -50 db at +/- 250 Hz from the channel center. It fills the channel, but needs no guardband. This is one of its advantages. Adjacent channels can be used with no mutual interference (assuming the receiver is capable of that selectivity). But no amount of receiver selectivity can solve the problem of sidebands falling *inside* an adjacent channel's passband, so Morse must be considered a modulation with a 400 Hz bandwidth requirement.

Amateurs tend not to view things on a communications system basis, but they should. We need to look at the effect on the total system, including all the other users on the band, and not just at our particular requirements, when we select modulations and operating methods. That way we can hope to approach optimum tradeoffs for the total system and our particular task. BTW that's why SS is so attractive. It offers total system advantages we can't easily obtain with other methods.

Yes.. we have such a system here in Houston. Our Clear Lake ARC has
an internet/packet gateway.. we give full internet access.. telnet, ftp, www,
email etc... we have over 200 users who come in via packet! We have
converse and links to other ham gateways etc.
We run Linux with the ax25 utils.. a special form of login and you are
presented with a full UNIX shell account.. we have set up some features
to make life easier for the non-UNIX folks, but basically the mail, telent,
ftp are pure UNIX. No JNOS/TNOS.. just pure Linux.. works like a champ. We
put it on the air OCT 15.. and the packet community here has fallen in love
with it.

>(but I told you that a long time ago)

If K&M said "Burp, the world would be a better place if you jumped
off of a tall building", would you believe them?

Kenwood's sale of ham gear might be dropping due to
1. Their prices being too high
2. The market being flooded with ham gear (see r.r.swap)
and folks are buying more used equipment
3. The number of licensees possibly stablizing (which does not

Now Burp, we already read this report on Newsline - why spam 3 groups
with it? I'm told that you are a heavy drinker and you get on the air
while drunk. Apparently what we've been seeing from you on here is also
a product of your high alcohol consumption. AA really works - please
try it, if only for the sake of your daughter and your students.

Skid, I've had several responses via CompuServe's hamnet forum. Several
supported the processing date vs check notation evidence and several were
exceptions to it! It was, I guess, curious for a short time anyway!

Thanks for the response & 73
Joe, K5HLR

I don't see any *valid* reason for me (or you), to provide any
personal information. If I want to do an anonymous good deed,
then fine, but I'm beginning to think someone is building a
database and it ain't a newborn who's doing the building.

I'll keep watching for those who get "hooked" by this ...

Al Gross, W8PAL, will be the special guest this Sunday, 6/30/96, on the Ham Radio & More Show. Mr. Gross invented the first hand held, the 1st beeper, and was the genesis for the wristwatch radio used by Dick Tracy, in Chester Gould's comic strip. Mr. Gross was heavily involved in rocket technology during World War 2 as well as the man behind the Joan/Eleanor Project. In addition, Mr. Gross was the 1st CB'er in the US, (not on 11m), and had the 1st CB contact in England between 2 mobiles. Don't miss this live call-in show.

Correct me if I am wrong BUT .....

Who said continued growth is a good thing?
Sixty years ago the joy of the hobby was for two operators to make contact with rigs they built and antenna's they designed.

These days the bands are crowded with Ham want-to-be's, DJ want-to-be's and people who wouldn't know good manners if they jumped up and bit them.

I for one say its time for this hobby to down-size. Maybe those people who get their license and then spend all their time bad mouthing the hobby will find new things to bad mouth (like net surfing). The true joy of amateur radio will always be there no matter how much it's bad mouthed.

CW has a major advantage over phone. It can get thru where voice can
not. ESPECIALLY for emergency communications. It has the ability to be
used over longer distances and still be readable. It is EFFICIENT for
those who are motivated enough to learn it. CB is for the lazy; not
Amateur Radio. I got my Tech+ in may and was harrased mostly by techs
that thought I was stupid for bothering with code. I know personally
that these are also only interrested in their radio as a cb
replacement. I pzarticipated in Field Day this week end and tried some
phone but kept comming back to cw. I totaled about 12hrs cw. ^hrs in
a single stretch and I had more fun in there than anywhere. Maybe my
10wpm isnt great but it was successfully fun.
Try it and have a positive outlook. It isnt hard, it just take some
actual working to build up. you cant be lazy, but it pays off!

No, as a licensed radio amateur I may purchase and own _any_ kind
of equipment I wish to modify for ham use. However, if I transmit
outside ham bands, I get a much harder fine than a none-ham.

Millions of beta testers?? Maybe if there were some quality and a little
alpha testing, those of us in the indusry wouldn't have to be "beta" testers.
I can tell youafter 25 years in computers there is really a shortage of true
technical skill and knowledge out there. Sure there is a lot of hear-say and
nay-say, but very few people have the knowledge to do anymore than regurgitate
what someone else has done. Many people have successful computer careers and
know little or next to nothing about them or how they work, only what they have
"learned" to pass a certificate or some such. Gone are the days of knowing
ebough about something to actually understand and fix it.

Maybe some should learn outdated information as this often is the knowledge
base for the technology of the future. There are certainly a lot of high
ranked business people out there who know enough of the buzz words, but very
little of the actual technology....

If the military are dumb, does mean we have to be. As for the truth of
that, I hear that elite units are still using CW as the most reliable
comms and that many units are REINTRODUCING CW training. :):)

If you saw that movie on the guys who crashed in ALERT North Pole you
saw that they had to ressort to CW type communication to talk to the
search party because their battery was frozen (That was not fiction).

Jeff:
For sure! And they were "invented" if one can call it that, by
Motorola. Bulky by today's standards, nevertheless hand-held.
Operation was FM in the 21 to 30+ MHz region to be compatible with
the many field ops FM units in place. It looks likes Mr. Gross
overstates his claim. But, history gets warped all the time.

> (but I told you that a long time ago)

Who cares what Macroshaft thinks? I certainly don't...

Kenwood's opinion, on the other hand, has a little more weight. One reason their sales have dropped, though, is that their equipment is expensive! (well, to me anyway... I'm only 21...) For the past six years I've been a ham, I've survived on equipment I bought at hamfests and fixed up, or equipment I've built myself. Very few of the hams I know can afford to buy new equipment from Kenwood... Building it is more fun anyway.

Oh, I'd love to be a corporation! Nearly infinite financial resources compared to the average ham! Faster than a speeding bullet, more powerful than a locomotive, able to gobble up huge amounts of the spectrum in a single round!!!

One of the first handhelds was the BC-611 used by the military during WWII. It used 5 miniature 7-pin tubes. It operated around 2-4 Mc.

>the 1st beeper

Selective-calling (i.e., paging) was being used at least as early as the 50s. I've got a couple Motorola tone encoders from that era given to me by the Los Angeles Fire County Fire Dept. They each have 14 tubes.

Do you think it's that different in the electronic technology field. Heck it's the
same in any field. There are those who excel, those who follow and those
who just fall by the wayside. If there are so many great "beta testers" in
ham radio then why is there so much crap being sold. When is the last
time that any of the big three ham radio manufacturers put out a handheld
that didn't suffer from extreme intermod. Other than a couple of mobile
vhf radios all the others have front ends looser than a hookers crotch.
VHF/UHF radios have become basically scanners with ham bands
thrown in as an afterthought. And sure some of the newer HF rigs
have introduced DSP, but other than that I haven't seen a rig worth
giving up my ICOM-735 for. And even the new higher entry radios have
some serious flaws that indicate pretty shabby "alpha" or "beta
testing or very poor quality control.

All I'm saying is that we are living an illusion if we think ham radio
reigns supreme over all other technology. And to those who
do think we are better then I ask why is this hobby not growing at
the pace of the computer hobby? Obviously there are a lot of
people in that industry that are on the cutting edge of technology.

If I'm not mistaken, Mr. Gross was part (head?) of the design team at Motorola that designed the first HTs for the military during or shortly before the war. Perhaps his (and it isn't really his, it's Len's) claim is not so overstated.

Your knowledge of Bill Gates's strategy is Hum NIL. This
guy's future strategy is the HOBBY market. The commercial
market is already in his pocket and saturated. Selling
upgrades is less and less profitable, people are fed up
with quaterly 200$ upgrades.

An immense subdivision of Microsoft is now working on
Internet tools and Games, yes Games. New tools for
programmers to develop Internet Agents and Animated Games
are in the pipeline. The hobby market includes world
communication via Microsoft private constellation of
satellites (not bigger than small fridges says Bill Gates)
directly to your computer.

Hams are one of the targets because they communicate for FREE.
And FREE is not a word that Bill Gates likes very much if he
is going after the hobby communication market.

Madjid VE2GMI
==========
And God said, "Let there be light." And there was light,
but Microsoft said he would have to wait until Monday
to be connected to MicroSoftNet. And God rested Sunday.

And Monday God saw the light and it was good.
Then he saw Microsoft's bill and that was not good.
So he became a ham radio operator as G0D.

:
This is rather interesting. In an article I read while doing a report on
Bill Gates (also mentioned in QST, but I will have to dig it out) Bill
Gates and Teledesic (Bill Gates' LEOs company) got on the WRC 95(?) agenda
at the time of the convention, which is nearly impossible, and asked for
something like 10Mhz of spectrum in the microwave bands and received it.
Nothing was ever mentioned about anything lower than Ghz. Besides, with
all of this hype about high speed communications and live video conferencing
I think you would need more than what the vhf band can supply.

Just my $0.02

========== comments GM0CSZ / KN6WH
Yes I agree with WN3SOH etc.
TV sweep tubes are fine for moderate power levels.
To ensure a reasonable life the anode voltage should be limited to
850V and they should be properly aircooled with one or more axial
blowers depending on number of valves and their chassis location/orientation.
I suppose an centrifugal blower and valve chimneys (home made from
domestic glassware) would even be better.
I used 2pcs 6KD6 in a Yaesu FT400 transceiver operating them at 650 V
with 1 axial blower. For a short time I operated with 850V on the
anode but valves then were rather hot, so I reduced anode voltage to
650 V. Even after a tuning mishap when the valves became so hot that
the glass almost melted ,resulting in a small dimple (implosion), I
used that pair of valves happily for another 2 years before replacing
them in the mid-eighties. (replacement cost for each General Electric
valve at that time, US$10)
The current price for this type of transceivers in the UK is approx
GBP 120.- (US $ 180.-)
These are my fond memories of a glorious all valve HF transceiver.

-I have seen nice, new, small HTs from Alinco selling for $179.
-basics. You can also get a load of accessories. RS offers almost
-nothing in the way of accessories. How about a rapid changer?

If you use the Icom BP3-BP8 (or CM- family) of packs, the Icom BC35 charger (or equivalent) works great. Since the HTX-202 is a derivative of the Icom 02AT (modified by Maxon for Tandy), most Icom accessories for the 2AT/02AT line work fine with the 202. BTW, how well does the Alinco work near pager transmitters?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 23/2330Z JUNE 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 23 JUNE AND FORECAST FOR 24 JUNE - 26 JUNE

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 22 Jun
Daily Proton Fluence >1 MeV: 2.2E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 4.4E+05 (normal)
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
24 Jun 25 Jun 26 Jun
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 24 Jun: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: ???

Estimated Indices : A K Observed A Index 22 Jun
Learmonth 5 1122 2211
Fredericksburg 5 5
Planetary 5 4

Observed Kp for 22 Jun: 2000 2222

2B. MAGNETIC FORECAST
Date Ap Conditions
24 Jun 5 Quiet to unsettled
25 Jun 5 Quiet to unsettled
26 Jun 5 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
23 Jun Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
24 Jun Normal Normal Normal
25 Jun Normal Normal Normal
26 Jun Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
23 Jun 6

Observed Australian Regional MUFs:
Darwin: Near predicted monthly values, with spread F and
blanketing sporadic E observed during local night.
Townsville: Near predicted monthly values, with spread F
observed during local night.
Sydney: Near predicted monthly values to 30% enhanced during
local night.
Hobart: Near predicted monthly values, with
spread F observed during local night.

Predicted Monthly T index for June: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
24 Jun 10 near predicted monthly values
25 Jun 5 near predicted monthly values
26 Jun 5 near predicted monthly values

>(but I told you that a long time ago)

Dont you just wish burt knew a bit about statistics. there are more hams, per capita, in the us now than there have ever been. the rate of growth is steady, and exceeds the rate of growth of the population. if this is dying, then what is living. my suggestion is that we leave burt alone. if he really hated ham radio, he'd send me all of his equipment!

>I find that 6 Meter AM is asking for it from the non-techno neighbors.
>If any power at all is used, they can recognise my voice from the
>audio rectification that always seems to go with 50 MHz operation.

I have recognized this possibility ever since I asked my neighbors if they ever got any TVI from me. They said they could clearly hear me coming through the TV once or twice. I realized that only my Heath DX-100 operations on 29.0 Mhz could demodulate so clearly. Especially since I had tweaked it all up for HiFi transmit. They were more amused than annoyed and I haven't operated on 10 meter AM for a couple of years since.

This will not prevent me from ancient modulation transmissions on 6 meters. I was on 50.4 Mhz last Monday nite during a big opening to the East Coast. Nobody answered my CQ's but a least I tried.

Sure, its sacrilege to use an Icom 706 for this but since I accidently took my Clegg 99'er to the swap meet I haven't got any tubes on that band.

Anybody got a Clegg Venus or something?

No, we don't. Mssrs. Gates and McCaw want to corner the market on RF radiation and co-opt the PCS systems coming soon. This is your brain on drugs, this is your brain on RF, any questions? :)
I can't imagine 800+ satellites in orbit anywhere while maintaining co-ordination with each other and avaoiding all the junk that falls out of the sky. And, of course, 800+ satellites statistically will have some systems failures - what do they do then? - more junk in the skies! Right.....

>quanta into account.

Hi Gary,

Which is however irrelevant. To receive a CW dot on HF it takes about 10^15!
photons. You can work out that even at the highest microwave band allocated
fot amateur radio communicaton, there is no noticable quantization.

The FCC licenses classes Tech, Tech Plus, General, Advanced and Extra
to use ALL frequencies above 300GHz for amatuer radio communications.
CQ X-Ray anyone?

>73,
>Clay N4AOX
>wyn@worldnet.att.net

That's fine, Clay, to each his own. But you, just like everyone else I asked, failed to answer the question. One liners are cute, but if you want the rest of us to jump on the band wagon and help you save ham radio, we need to be informed. I'd love to help. But so far I have seen nothing tangible from anyone, just a lot of the sky is falling hype.

So, I repeat:

Please show us some documentation to prove they are after us. SHARE what 'you have read' that says the sky is falling with the rest of us.

73, Jim KH2D

>Jeff KH2PZ

Thanks for that insight Jeff, that may explain why Burp's writings at
some time aren't as cohesive as they are at other times.

Another reason for Kenwood's sales being down could be:

4. Icom. Nobody familiar with Icom would buy anything Kenwood makes.

5. They've lost their share of the good buddy market to Yaesu.

Or it could just be a marketing ploy. I'm in the golf business, and
if I could convince people golf was dying and the only way to save it
was to recruit more golfers, I'm sure I'd sell more golf clubs......

Dave -

Congratulations on making the decision to upgrade.

I like a program named Morse Academy [one place it is available is Compu$erve's HamNet Forum Section 7]. MA is a freeware program and I used it to learn the code from the ground up. I found the drill exercise and QSO exercise very useful.

There is a line of thought that says it is best to learn the code at the fast character speed spaced out to get to the word speed. As you become more familiar with the code, the brain [the fastest, most powerful computer available] will convert the sound to a recognized character and eventually, you will hear words!!!

There is a methodology for copying at very high speeds that involves copying behind. In other words what is recognized is several letters behind what is heard. I'm not very familiar with this item an don't know if I'm practicing it yet <VBG>. SuperMorse does have a copy behind exercise - I'm not certain that the others do.

I find that because I can recognize the faster character speed that even when I am listening to slow code, I am able to do head copy fairly well.

Final thoughts, for some - including and especially me - code does not come easy. The way I learned the code was dedicated practice, practice, pracitce including listening to live code W1AW or one of the novice segments of the bands. Also, try to get on the air as soon as possible after the 5 wpm. On-air operation helps a great deal and gets the butterflies out. As soon as you think you are ready, take the test and if you need to, try to take it twice the same session. I found that I usually did better the second time [butterfies were dead by then]. There are two ways to pass - answer the questions or have perfect copy for one minute - approx. 30 characters in a row for 5 wpm. When taking the test, you will have time to go back over the code, fill in obvious missing letters and making sense of your copy to answer the questions. I tried to take that attitude of take the test, the worst that could happen is I wouldn't pass and I still had some practice in test conditions.

Final thought - if I can get from zero to sqeeking through the 20 wpm test is 10 months, it can be done.

take care, good luck and 73

And so what, what is so bad about that. If you want to increase the
ranks a no code path would be the way to do it. I love to use code and
am reasonably proficient at it (25-40 wpm) but see it as ancient,
backward, and totally unneeded for reliable fast communication. I
don't see why you should be against Kenwood wanting to increase sales
and therefore making available excellent equipment ant lower prices.
Don't cut off your now to spite your face.

I agree here. Microsoft's decision has nothing to do with the
health of ham radio.
>
> About Kenwood, I use a Kenwood HF RIG but next rig will be
> YEASU or TEN-TEC. Vote with your wallet !
>
> Madjid VE2GMI

As for Kenwood, at least from my local experiences, they have had
quality problems. If they aren't selling enough rigs, they need to
look at their own doorstep. I don't see Icom and Yaesu complaining.

Even if the volume is dropping off, so what. There is a saturation point
in every market. The no-code license did what it was supposed to,
it got all those people in the door who were unwilling, or unable
to learn morse code. Now there is going to natural, expected slump.

I agree that it was a marketing ploy on Kenwood's part. Amateur radio
is just a small, small portion of their total business.

I have believed for a long time that they only keep an amateur division
around is for experimentation with stuff they would like to put into
their commercial equipment, but are unwilling to spend the R&D money
to perfect it before introducing it into a much more demanding
commercial market.

Dispersion in a transmission line has to do with the *group* velocity of a small *band* of frequencies, as compared to the *phase* velocity of a *single* frequency. If the velocity factor is 1.0 they are the same. In a coax, they are different, therefore in this sense the coax is dispersive".

This comes from the same person who advocates speeding because the
highway speed limits are set far lower than their designed speed.
It's easy to understand your position now with regard to the bootleggers.
You side with them because you see a bit of yourself in them.

Here's a little item to chew on:

97.101d:

(d) No amateur operator shall willfully or maliciously interfere with
or cause interference to any radio communication or signal.

Okay, let's take this a piece at a time. Are bootleggers transmitting
"any radio communication or signal?" Yes. So is overrunning their
transmissions causing interference? See 97.3a(22) definitions:

(22) Harmful interference. Interference which endangers the
functioning of a radionavigation service or of other safety
services or seriously degrades, obstructs or repeatedly
interrupts a radiocommunication service operating in
accordance with the Radio Regulations.

Are bootleggers operating "in accordance with the Radio Regulations?"
No. So is it actually possible to cause "harmful interference" to
their transmission? I think the answer is obvious. And I believe
this was what the FCC official was thinking when he retorted with
"Interfering with whom? They're not making an authorized transmission
so you're not causing interference."

Here's the scenario one more time, then I will not reply to any more
of Gary's whining for criminals' rights: Bootleggers pop up on 10M.
The ham sends a 3x3 CQ and listens for another ham. If no answer
he continues to send a 3x3. If the bootleggers move up 20 kc, he
moves too, and sends another 3x3. He's making it sound as if the

band it active. It's a very docile method of gently letting the bootleggers think that no matter what freq they choose there will be someone on it. They eventually go back down to the "lower 40". He's not "throwing a brick on the key" and walking away.

The FCC has no problem with this. Accept it Coffman.

Jeff KH2PZ

And with all this mumbling about commercial LEO satelitte systems, I'm
just so proud that I spent lots of dollars and two or three years
helping UOS do beta tests. Could turn out that the all the pacsats
should be sporting bumper stickers that read:

'I've Been Screwed Before, But it Felt Better'.

>Gary

OK, Gary, that's a description of what you do, and why you feel you
are performing a service. What percentage of hams do you feel fit
into the same catagory as you do ? I honestly think that a very small
percentage of hams participate in any type of public service activity.

In our local community here, that percentage is zero. Of the hams I
know in the U.S., none pass traffic, none do phone patches, and none
participate in any communications support activities for the public.
If I see a traffic accident or someone broken down on the road, I
call it in too, on my cellular phone. I will admit that I attended a
few marathons here a few years back when hams were supposed to
be providing communications support, but the activity was such a
disorganized mess, that I and a bunch of other hams felt we were
wasting our time standing on a street corner with an HT. So of all
the things you mentioned, Gary, I can only say that I personally have
been a beta tester, and as I mentioned previously, that may be for
the good of the public, but if the people who say the sky is falling
are correct, it didn't do much for the hobby.

To me ham radio is just a hobby. I don't feel at all committed or
obligated to anyone, as I passed the test to get a license and I
paid for all my own equipment. I'm sure there are lots of hams who
feel it is a service, but I am also sure that there are lots of hams
that feel it is a hobby.

If the FCC asked me tommorrow to answer one question,
'What have you done to justify the existance of Amateur Radio' ?,
I honestly would have to answer 'Nothing'. Unless passing out
30,000 QSL cards can be condsidered 'international goodwill'.

>that atitude, *you* should be the one getting off the chair.

>Gary

Well, Gary, there's a litte Burp in all of us I guess, you too huh ?
You lash out before you comprehend. Franks suggests that internet
is 'the world', I don't. I've seen more of the world by accident then
I ever intended to see on purpose. What am I doing here ?

I find it amusing. And I can't play golf at night cuz it's dark.

I don't have to get up in the morning (except for tee times, and we
usually schedule them after noon), I stay up very late most nights,
I don't watch TV, and internet, like ham radio, is a great way to burn
up free time. You might say it's a hobby, like ham radio. People who
can't find things to do in their free time are usually very unhappy
people, Gary, and I try my best to keep smiling. I was forced to use
internet because of business reasons, so I didn't come here looking
for any ways to improve my world.

I find a few intelligent things to read, but not many. So I again, I
guess, internet is like ham radio, where I find a few interesting
conversations to listen to, but not many.

I've met a few people I enjoy typing to, but not many, just like I
have met a few hams in different countries that I have become
good friends with, but not many.

It's kinda like RADIO FUN with no radio, Gary. Surely you're
not so busy with breaking things that you don't have time for
a little RADIO FUN ????

So that's why I'm here. But I'm just visiting, it's Frank's
world, not mine.

What are you doing here, Gary ?

>As we all know how beneficial the practical knowledge gained through
>amateur radio is, perhaps companies like Microsoft are purposely
>trying to murder 'our hobby' so as to minimize competition in the
>future wireless world by limiting the ability of future engineers and
>technicians from gaining self-taught, practical experiences.

Only a paranoid and self-delusioned ham would believe that.
I hardly think that Bill Gates and friends give ham radio a
second thought. The growth of ham radio doesn't even come
minutely close to the explosive growth of the internet and
other computer related activities.

Maybe we were a while ago. Today we pale by comparison to the millions
of computer beta testers. And one cannot say that there is no technical
skill and knowledge involved in dealing with computers. Also one does
not have to learn an outdated mode of communications to prove their
prowess in the computer world.

There was a time when they supposedly did, but I don't ever remember
being asked to go down to the FCC and prove I could do it. Same with
logging. I know when they dropped the logging stuff, I can't put my
finger on when the FCC decided to stop, uhm, advertizing their
right to ask you to prove your morse capability.
> Note that PACTOR II claims to be able to function
> with a CNR of -15 db. That's below the threshold of audibility
> for a Morse signal,

I don't remember seeing this spec anywhere. And what is meant by "function,"
maintain a link? Pass a certain amount of data?

I would also like to know where
that -15dB is being measured. Is that at the speaker teminals of the
receiver, or after the final filtering done by the TNC?

No, I don't expect you to answer these, just pointing out that claims
are easily manipulated when worded broadly - i.e: The Maxon Antenna matcher!

Still, in a recent review of different digital modes used by hams today,
PACTOR II was head and shoulders above the rest. (July 1996 QST, pg 35)

At 0dB SNR (not mentioned where that was measured, but I suspect at the
receiver audio out terminals) the throughput was 6-7 char/sec.

BTW - In a 250Hz bandwidth, we can copy morse at 20 wpm to
very nearly 0dB S/N. This doesn't take into account the
operator however. I remember once copying a CW signal buried in a
movie soundtrack - this was in High School and the film was on WWII.
I remember blocking out entirely the voice track and other stuff
once I heard the morse. I'm jusdt glad we were't asked any
questions later about the introduction!

the path is slow and painful in getting acceptance. Like VHF(and up)
packet at 28.8K in the standard voice bandwidth(2700Hz)
and without rig modifications.

CLOVER is a unique example. Hats off to HAL though for having the
foresight to make full use of the DSP to reduce sidebands.
In the case of CLOVER, the guardband is minimized to the
absolute minimum possible, but some is still required due to
nonlinearities in the transmitter, receiver weaknesses and
frequency stability issues.
> BTW that's why SS is so attractive.

I must admit to not being really up on Spread Spectrum. I know enough
though to understand it indeed offers a lot. Maybe someday I'll get the
chance to tinker with it.

Gary, always a pleasure!

Hi All,
This years Horncastle Rally will be on Sunday June 30 at the
Youth Centre, Horncastle, Lincolnshire.
The start is at 10.30.
Admission is the princely sum of 50p.
For Table bookings contact Tony G6CZV@GB7IDE or me via email at
101704.1654@compuserve.com.

Begging to differ with Armond, but the directive to drop CW came directly
from the office of the Secretary of Defense. It requires ALL DoD agencies
to terminate ALL use of Morse Code in all DoD operations (including
training) by the end of this fiscal year, aka Sept 30, 1996. This order
includes ALL military and defense forces, period. I guess the new
definition of being elite in Armond's eyes will be that they defied a
direct order from the Secretary of Defense.

Apparently Gates and McCaw are not involved in the bid for the amateur frequencies. In a note from ARRL, I noticed that Gates and McCaws company, Teledesic, was conspicuous in its absence, so I sent a note to Dave Summner questioning this. His reply:

"Jim, Teledesic is one of the "big LEOs." Their interest is in much higher frequencies; VHF/UHF won't provide the bandwidth they need."

But keep those cards and letters going to the IWG and FCC et al. We are still being threatened.

I don't know what this means. How do you "charge" a ZIP file?

> I have PKUNZIP.
> How can ido to extract my file from *.ZIP ???

This I can help you with:

Put the .ZIP file in a new subdirectory. Make sure there's a path to
PKUNZIP.EXE, or put it in the same subdirectory as the .ZIP file. Then,
enter the following command:

PKUNZIP *.ZIP

The upzip utility will uncompress all files in the zipped archive.

4283. Kenwood 732A mod question

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-25 00:00:00 UTC
From: John Smith <jtsmith@mindspring.com>
Message-ID: <01bb630d.e1e92be0$b62779a8@jtsmith.mindspring.com>
Source record: 222152

I received a mod for the Kenwood 732A that describes the 800MHz
receive option. It states to solder a capacitor next to pin 1 on the foil
side next to IC202. It does not say where the pad is and where the
other end of the capacitor is to be attached? Anyone out there
who has performed this mod and verifies it to work ?
Please respond with where the other end of the cap is to be attached.

Thanks
John KI4XO

My experience with military comm (TSC-60 crew, 242 CCSQ, WANG) leads me to
believe that the bulk of military traffic is unsuited to CW because of
it's low throughput. 75 baud TTY and such are only used as the very last
resort because even they are so slow. In today's military, where just
about everybody and everything moves above mach 2, every piece of data
must be relayed ASAP because lives depend on it.

Sure CW will always have a place.....ELF submarine comms for example. But
there just isn't, and won't be, the demand for CW that there once was.

4288. Kids _are_ interested in ham radio.

This message is to all of the people that I've offended on this newsgroup.

I'm sorry that I've been such as ass. It's mainly because I have a drinking problem, and a drug problem, but I'm dealing with it. I get on the internet and post things that I regret the next day, but by then it's too late.

I'm leaving my famous "horse's ass" GIF file at qrz.com as a reminder to me and to you what drinking can do to a person.

I'll probably get drunk and retract this someday, but for now, I just want to say that I'm sorry (and sober, for now).

Burt, K1OIK

PRESS RELEASE - PRESS RELEASE

Phantom s Amateur Radio Group, Portland, Oregon Phone (503) 818-PARG

ATTN: All Newspaper, Newsletter, and Magazine editors
(printed or on-line)

The following is an announcement of a local ham radio group catching a person causing malicious interference to a Police department radio system. Please feel free to publish. Send e-mail to mscott@teleport.com if you would like an electronic copy of this release sent to an e-mail address. 6/24/96

<START>

During June 1st, 1996 in Seaside Oregon, where the SEA-PAC ham convention was being held, a group of hams belonging to PARG (Phantoms Amateur Radio Group) were down on the beach front enjoying the annual PARG bonfire. One of the hams (KB7YZS) was monitoring the local Seaside Police Dept. He heard someone cursing and yelling at people. At first he thought it was coming from the UHF side on his hand-held transceiver, but to his surprise it was coming from the VHF side which was monitoring the police.

He promptly notified everyone at the bonfire to listen. After a few minutes of listening to the person, the members had figured out that the person was up in a balcony, was with 3 or more people and 2 of which were females. They realized this because of key things he said and voices in the background.

The 4 PARG members in the group (KB7YZS, KB7YZR, N7XMD, and AA7UP) just happen to be most of the PARG Interference Committee. They immediately activated the PARG Interference Committee direction finding operations. They promptly tracked down the interference to a specific location of the Shilo Inn and searched for someone matching the description. After only 5 minutes they saw a group of people on the third floor of the Shilo who matched the description. Then they saw him pick up his hand-held transceiver and speak into it. At the very same moment the voice on the police frequency was saying "Hey, fat ass, yea you in the black pants and the white shirt". While he was saying this on the Seaside Police frequency the members noticed a man wearing those clothes, a little on the heavy side walking directly underneath them.

One of the PARG members saw a Seaside Police patrol car in the area. A PARG representative approached the officer and asked him if he was looking for a person causing interference to the Police Frequency. He seemed very upset and replied "YES"! The PARG representative then informed the Seaside Police Officer where the malicious interference was coming from. Three other PARG members were on their way to the third floor when they saw the people (from the room/balcony where the interference was) come running down the stairs and away from the Shilo.

The officer took a report from the PARG representative, including an exact location of the motel room and spoke to the hotel manager. After 2 hours the interference started up again. The Seaside Police Officer went directly to the room the PARG Interference team pointed out and caught the person in the act of doing the deeds.

The above is known to be facts. The above mentioned is knowledge from speaking the PARG Interference Committee members and to a friend of the suspect.

The man who in is question has a call sign of KE6VNU and is from Central California. He apparently was in Oregon for the ham convention. Information indicates he was released from jail only a short time before this incident, the charge he was in jail for was malicious interference to the local police in his area. This obviously did not teach him his lesson. We understand that he caused a great amount of interference to the Sacramento County and Roseville emergency/public services communications and often identified himself on those malicious transmissions as "The Phantom Jammer". We were told the charge Seaside Police brought against him was "Interference of a police officer in line of duties".

Note: It is an unfortunate coincidence that the malicious interferer used the name "Phantom Jammer". He has absolutely NO association with or relation to PARG (Phantom's Amateur Radio Group), the group which located him & turned the necessary information into the Seaside Police which led to his arrest for the interference. We did not release this information until now at the request of the local law enforcement officials to prevent tainting their investigation.

This was PARG's second year in a row of providing public services during the Seaside Ham Convention. Last year several PARG members apprehended a purse thief (after a brief foot pursuit), returned the purse to the rightful owner, and detained the suspect until police could arrive. PARG also performed crowd control activities at this time due to the large number of people who stopped to watch the purse thief incident.

PARG is the Phantom's Amateur Radio Group in Portland, OR and is Portland's most active VE testing, repeater club, emergency communications, and ham radio group. Please visit our web page at "http://www.teleport.com/~mscott/dumb.shtml".

Jeff:

You can find more info on this by looking at
http://www.fcc.gov/wtb/license.html

But ... in a nutshell...

For now (there is an NPRM to make this permanent) the FCC has suspended
the requirement for station licenses for "recreational ships" (see the
FCC's limits on that term) and "private aircraft" operating
domestically.

For ships it applies to VHF only. MF/HF, satellite and radiotelegraph
stations must still be licensed.

You identify using the callsign of an existing license or the vessels
name. Private aircraft still use the their US registration number
(a.k.a. the "N-number) as a call - no real change there since that is
normally the licensed callsign for a plane anyway.

The FCC has asked the Coast Guard not to enforce license requirements
for recreational ships while the Commission considers the new rule(s).

That's because the ham market is so small. If they sold as many ht's as
VCRs, they'd be able to drop the price in half.

The bottom line is that the military has VERY deep pockets that allow
them to use the latest in technology,.....on BOTH ends of the QSO.
As Hams we have the Fella with a IC-775, computer, three or four
towers with monobanders, talking with a another Ham with a homebrew
rig who's VFO swings with the varying line voltage in his country
(listen to Cuba lately?). To compare the ARS with the Coast Guard or
any other form of the military is comparing apples and oranges. I
guess since Cecil got his Vanity call he lost his sense of humor.

Gary Coffman generally has some pretty smart things to say, and he says them well. But I question his continued put-down of learning Morse as "conditioning a wetware modem" or as the equivalent of "knapping a stone axe."

By the same reasoning, why learn to walk or ride a bicycle? Why not just issue kids their own little tri-wheeled scooter, with digital fly-by-wire joystick control, as soon as they're old enough that they can form a desire to go somewhere?

Well, it's because walking or biking will take you places without expensive equipment, into conditions where that normally higher-performance equipment simply won't cut the mustard. Morse is the champion of graceful degradation, able to get through conditions of unpredictable fade or QRM with the unmatched self-adapting wetware at both ends to make real-time decisions about repeating, adjusting speed, and the like. It's a universal standard of impressive longevity, unlike digital protocols.

I have recently come to the conclusion that Morse proficiency is not, however, a rational prerequisite to HF amateur radio operating privileges. The purposes of the Amateur Radio Service, as defined by FCC Regulations, are materially advanced using Morse Code only in modes such as moonbounce communication. And this is done on frequencies where Morse skills are not a licensing requirement. Every other argument for the Morse requirement on HF boils down to saying that a small pool of operators who can converse at 20 wpm is more useful than a larger pool of operators who can copy an SOS at 5 wpm and alert appropriate agencies to the need for assistance.

Wilderness QRP operation will continue to make Morse a useful skill. Pure enjoyment of something different from ordinary talking will continue to make Morse a popular form of radio-based recreation. That's not a reason to require it for a license. Neither is it appropriate, however, to dismiss it as a skill whose enjoyment brands the operator as other than a "modern" ham.

Good luck on the tests!!

The time it takes to get your call assigned depends on the VE group.
IF they do electronic filing, you could have your call by the end of
the week. If the mail is used it will be longer. Ask the VEs how
long it has been taking them. You can then check the site:

http://athena.ualr.edu/doc/hamualr/callsign.html

to see if you are in the database. I understand the database is
automagically refreshed each evening.

In a previous article, Steven_Sampson@msn.com (Steven Sampson) says:

>Questions:
>
>A. Do you think that a minority of the people should have more rights
> than the majority--simply because they were there first?

Yes. If I owned 500 acres in Kansas, I don't believe someone should come
along and take it if I don't want to sell it.

>
>B. Do you think that Gold (or any fixed/slowly increasing) type
> treasure should be purchased by the majority and given to a
> minority as a right?

No.

>
>C. Are you against welfare programs that don't require work?

Yes.

>
>D. Do you think radio spectrum should be socialist or capitalist?

Do you think air should be socialist or capitalist? Same thing in my book.

YOU OWE FOR THE FLESH! PAY UP! (Can you tell me where that's from? :-)

>
>E. Do you think radio amateurs will be able to progress from morse
> code to spread spectrum TDMA/CDMA in five years?

Some of us will.

>
>F. If E is true, do you believe pigs can fly?

A lot of larger things flew when the tornado went through here a month
ago (grain elevators, banks, etc.) Probably a few pigs too.

>
>The reason for this message is to prepare yourself for the coming
>WARC programs, in which radio spectrum will be removed from the
>non-progressive socialists, and sold to the highest bidder. Instead
>of a license giving you hundreds of Megahertz spectrum, you will pay
>the same for a license giving you Hundreds of Megahertz in bandwidth
>in a much smaller spectrum. The choice is yours--1200 baud
>stagnation, and 15 kHz channels, or infinity.

I myself don't think radio spectrum is a "commodity" to be sold, just as
air is not (shades of "Total Recall"!) It is not by definition real estate.

>
>Steve
>"Radio Relay is history, as is any organization built around it"
>

What's that supposed to mean? The government uses packet.

I would like to respond with two points here:
1) History is once again repeating itself. A while ago E.F Johnson said nearly the same thing when the CB craze was catching on. They cut their ham radio line and went full force in the CB market. A lot of hams remembered this when the CB craze ran it's course, and the Johnson Ham gear didn't sell either. Too bad, the Johnson gear was usually top quality, but that doesn't override a bad image.

2) Even though we don't like it, Kenwood is sending us a message to which we should react positively. Even though it may not be totally true, ham radio IS ailling. We need to stop bickering, start thinking positively more often. We need to accomplish some major breakthroughs through a combination of synergism, persistance and expertise. An example: we have the expertise among us to create a mobile data network that could pale any commercial system out there. All we need is the desire to accomplish something like this.

4316. Field Day Lids block W1AW message

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-25 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <4qon2f$hvm@cville-srv.wam.umd.edu>
Source record: 222216

Most of the operators on during Field Day, I suspect, had a clue.

Some, however...the FD message was given as a voice bulletin on Sunday at 1500z on 7.299 MHz among others. We made the mistake of starting to listen for it on 40m.

At 1500z, W1AW came on the air and, gee, people kept calling "CQ CQ FD CQ CQ FD this is..." without regard for the fact that 7.299, besides being just on the hairy edge of the 40m band, was the voice bulletin frequency.

Occasional shouts of "Hey, you're blocking the W1AW bulletin" did nothing to deter the "CQ Shouters." Oh well. We went down to 3.999 and listened there instead (they repeat it once, at normal speech speed, i.e. write FAST!).

With an attitude like this its no wonder you hate ham radio. NO ONE WANTS
TO TALK TO YOU. Any hobby is what you make of it. the fact that your
teenage off spring don't like it comes as no great surprise. They will
most likely find very few people their own age to talk to and have little
diser to try and hold aconversation with someone their parents age or
older. If all you can do is whine and complain about everything hams do
why bother turning on the rig or reading this news group.

This past field day I must have qso at least a dozen young hams working
club stations.

4319. VHF Operation Question...

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-25 00:00:00 UTC
From: amethyst@iglou.com
Message-ID: <4qovb6$b5c@ha1.ntr.net>
Source record: 222219

This question is more for clarification than lack of knowledge,

I have a Radio Shack HTX-202 2M FM transceiver, can I communicate with someone who is using a non-FM transceiver? I would think that he could receive me fine, but would sound garbled on my end.

The reason I ask is that I want to get into VHF non-repeater contacts, particularly DX. I have called CQ on the national calling frequency (144.200) a few times, but the responses have been garbled.

Is there much activity as far as FM non-repeater communications go? Once I get this antenna up, will I have any trouble making contacts on the simplex range of the band?

Thanks,
KE4RCA

hi,

I am searching for any description of the following camera model:

- color CCD-Camera Modul
- manufactured by AT&T
- ID: Video Camera PV Camera 200-NTSC /201 PAL

this model can be pluged to a computer-card. therfor there is a conector
with about 8 (i don't know it now) pins.
an other conector is for the vidoe output and the power surply.
it works all fine, execpt if there is to many light.
i think, as it is a computer camera, there must be an option to regulate the
chip or something in this way.

this info is needed for atv-tx-experiments...

any help is welcome, also the description of the other pins at the 2
conectors.

thanks for answering ;-)

ps: please send any infos as a PM to
Torsten.Fechner@rrze.uni-erlangen.de
not to the newsgroup because it is normaly no ony of my favourit ones....

This has got to be one of the most lame-brained comments I have seen
posted here in a while.

Flight training has nothing to do with ham radio. Trying to compare ham
radio testing requirements to flight training requirements is not even an
"apples and oranges" analogy - It's more like "apples and rocks".

Get a grip, folks!

The toy radiometers do not use light pressure. I suppose if one built such a thing in complete vacuum with extremely low mass, it might be able to work. But the scale is entirely wrong. What actually happens with the toy ones you see is the argon gas heats up on the black sides of the vanes, pushing it forward. The light sides do not radiate much heat, so the gas is cooler.

References: <31CE98EA.6671@crpl.cedar-rapids.lib.ia.us>

You will notice dispersion especially with pulse propagation (the Fourier transform of a pulse has a lot high freq. components in it), in which the pulse looks less and less like a pulse as it travels down the coax. Dispersion creates an effective upper limit on bandwidth of transmissions over long distances. The same phenomenon is present in any wave motion through a medium other than vacuum. Optical fibers are dispersive, as is air for sound. Dispersion is not generally a practical problem in most amateur radio applications. High speed computer designers have to worry about it, though, as do long haul, high bandwidth network designers.

>> <nudge nudge> Say No More!

Well in the US it is going even further the other way. You don't need a
license to buy a Marine Radio...and under many circumstances - you DON'T
need a station or operator license to use a VHF Marine transceiver.

So, are you suggesting that the practical learning stops once
the entrance exam is passed? I would suggest that it is only
after the license is issued that practical experience can be
gained.

Source record: 222230

BTW, while 186,000 miles/second is a nice round
figure for the speed of light, it is usually
stated in meters/second in the round number
300 * 10^6 meters/second. I have seen a number of
'official' more accurate values for this which always
seem to differ slightly.

I currently use this value for my complex.h header
in my C programs:

299.792458 * 10^6 meters/second

Anyone have the latest? ;-)

They *do* Cecil, it is called the STANG HF modem, works even better
than PACTOR II (and *that* works lots better than OOK Morse). That
OOK Morse can get through where SSB can't isn't exactly hot news.
We've known that for decades. Of course when SSB can get through,
it has higher throughput than OOK Morse. But both are bottom of
the barrel methods compared to Clover, PACTOR, etc.

Message-ID: <01bb62ca.12845980$0e1222c7@bill_byrom.teleteam.com>
Source record: 222233

Yes, the velocity of electromagnetic signals can be frequency dependent. Dispersion is caused by interaction with the transmission medium, such as the dielectric in a transmission line. This effect can even cause problems with long twisted-pair lines used in telephone communication. The ionosphere also exhibits dispersion when measured over a wide frequency range.

Another way of describing this effect is group delay. If you produce a repetitive short CW dit and slowly sweep the frequency while measuring the response of a crystal filter, you will find that the delay of the pulsed signal caused by the filter is frequency dependent. If you are transmitting a wide bandwidth signal, such as video, this effect can dramatically reduce the quality of the received signal. Some frequencies (in the content of the video you are watching) arrive at your television after others. This can cause sharp vertical lines to become fuzzy, since the Fourier content of a sharp edge includes a wide range of frequencies.

I work as an application engineer in test equipment sales. My company manufactures equipment which can generate and measure signals with sharp edges containing frequency components up to about 20 GHz. Using a technique called TDR (Time Domain Reflectometry), we can measure the impedence characteristics of cables and PC boards by measuring reflections of these high frequency pulses. Unfortunately, dispersion limits the ability to measure long cables or PC boards with high resolution, since the sharp pulse is broadened so much that distance resolution is diminished. Fiber optic communications is also greatly impacted by dispersive effects, and special "low-dispersion" cable formulations are used.

>the simplex range of the band?

Well for one thing the calling freq you are using is for single
sideband contacts. That is the reason you are hearing them garbled.
The FM calling freq is 146.520. Try that one out. You'll be surprised
at what you will hear.

Let us also not forget that Bill Gates is also the main man behind the X-files (a government front program explaining mysteries that way the govenment wants us to know them). Also, Hitler is not dead, a 9000 lb baby was born to a 1 day old infant in the oval office and the FCC is run by the unabomer.

The government is watching - you may now become so paranoid that you turn to drugs, supporting the defict by paying the columbian drug lords who got Clinton into office. Also, Mr Clinton is a changeling and Bill gates is a KGB agent and quite possibly a Borg.

PRESS RELEASE - PRESS RELEASE

Phantom's Amateur Radio Group, Portland, Oregon Phone (503) 818-PARG

ATTN: All Newspaper, Newsletter, and Magazine editors (printed or on-line)

The following is an announcement of a local ham radio group catching a person causing malicious interference to a Police department radio system. Please feel free to publish. Send e-mail to "mscott@teleport.com" if you would like an electronic copy of this release sent to an e-mail address. 6/24/96

<START>

During June 1st, 1996 in Seaside Oregon, where the
SEA-PAC ham convention was being held, a group of hams belonging to PARG (Phantoms Amateur Radio Group) were down on the beach front enjoying the annual PARG bonfire. One of the hams (KB7YZS) was monitoring the local Seaside Police Dept. He heard someone cursing and yelling at people. At first he thought it was coming from the UHF side on his hand-held transceiver, but to his surprise it was coming from the VHF side which was monitoring the police.

He promptly notified everyone at the bonfire to listen. After a few minutes of listening to the person, the members had figured out that the person was up in a balcony, was with 3 or more people and 2 of which were females. They realized this because of key things he said and voices in the background.

The 4 PARG members in the group (KB7YZS, KB7YZR, N7XMD, and AA7UP) just happen to be most of the PARG Interference Committee. They immediately activated the PARG Interference Committee direction finding operations. They promptly tracked down the interference to a specific location of the Shilo Inn and searched for someone matching the description. After only 5 minutes they saw a group of people on the third floor of the Shilo who matched the description. Then they saw him pick up his hand-held transceiver and speak into it. At the very same moment the voice on the police frequency was saying "Hey, fat ass, yea you in the black pants and the white shirt". While he was saying this on the Seaside Police frequency the members noticed a man wearing those clothes, a little on the heavy side walking directly underneath them.

One of the PARG members saw a Seaside Police patrol car in the area. A PARG representative approached the officer and asked him if he was looking for a person causing interference to the Police Frequency. He seemed very upset and replied "YES"! The PARG representative then informed the Seaside Police Officer where the malicious interference was coming from. Three other PARG members were on their way to the third floor when they saw the people (from the room/balcony where the interference was) come running down the stairs and away from the Shilo.

The officer took a report from the PARG representative, including an exact location of the motel room and spoke to the hotel manager. After 2 hours the interference started up again. The Seaside Police Officer went directly to the room the PARG Interference team pointed out and caught the person in the act of doing the deeds.

The above is known to be facts. The above mentioned is knowledge from speaking the PARG Interference Committee members and to a friend of the suspect.

The man who in is question has a call sign of KE6VNU and is from Central California. He apparently was in Oregon for the ham convention. Information indicates he was released from jail only a short time before this incident, the charge he was in jail for was malicious interference to the local police in his area. This obviously did not teach him his lesson. We understand that he caused a great amount of interference to the Sacramento County and Roseville emergency/public services communications and often identified himself on those malicious transmissions as "The Phantom Jammer". We were told the charge Seaside Police brought against him was "Interference of a police officer in line of duties".

Note: It is an unfortunate coincidence that the malicious interferer used the name "Phantom Jammer". He has absolutely NO association with or relation to PARG (Phantom's Amateur Radio Group), the group which located him & turned the necessary information into the Seaside Police which led to his arrest for the interference. We did not release this information until now at the request of the local law enforcement officials to prevent tainting their investigation.

This was PARG's second year in a row of providing public services during the Seaside Ham Convention. Last year several PARG members apprehended a purse thief (after a brief foot pursuit), returned the purse to the rightful owner, and detained the suspect until police could arrive. PARG also performed crowd control activities at this time due to the large number of people who stopped to watch the purse thief incident.

PARG is the Phantom's Amateur Radio Group in Portland, OR and is Portland's most active VE testing, repeater club, emergency communications, and ham radio group. Please visit our web page at
"http://www.teleport.com/~mscott/dumb.shtml".

PARG, PO Box 1586, Beaverton, Oregon 97075-1586
Phone 503-818-PARG (24 hours)

Signed, PARG BOARD of DIRECTORS
Justin Bousquet, AB7NG, PARG President

Does providing communications on 2meters for a search and rescue operation for a little girl that was abducted seem self centered?? The volunteer fire dept was there. However the 900 MHz system that the city was using would not work in valleys. The city officials were only carring excess bagage. Their radios could not communicate. The hams could. The hams were asked to provide help with communications because the "official" comm system would not work.

This does not sound self centered to me. It sound like saving the bacon for thr city.

4351. 2001--The end of socialist radio

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-25 00:00:00 UTC
From: Steven_Sampson@msn.com
Message-ID: <00001fef+0000446d@msn.com>
Source record: 222296

Questions:

A. Do you think that a minority of the people should have more rights than the majority--simply because they were there first?

B. Do you think that Gold (or any fixed/slowly increasing) type treasure should be purchased by the majority and given to a minority as a right?

C. Are you against welfare programs that don't require work?

D. Do you think radio spectrum should be socialist or capitalist?

E. Do you think radio amateurs will be able to progress from morse code to spread spectrum TDMA/CDMA in five years?

F. If E is true, do you believe pigs can fly?

The reason for this message is to prepare yourself for the coming WARC programs, in which radio spectrum will be removed from the non-progressive socialists, and sold to the highest bidder. Instead of a license giving you hundreds of Megahertz spectrum, you will pay the same for a license giving you Hundreds of Megahertz in bandwidth in a much smaller spectrum. The choice is yours--1200 baud stagnation, and 15 kHz channels, or infinity.

Steve

:>can I find out for sure?

:>Sam
:>AD5C

Hello Sam, as of yet, no the 10-10 roster is not on the Net. But a Web interface with a call sign/number lookup program might be forth coming in the future.

It shows that you are correct on the guess Sam, it has you listed as 21826 which is a pretty low number compared to the 68,000 range its up to now. Also shows your address as Behrman Hwy in N.O. I know that the address info is incorrect as your address has changed according to other sources. If you have any other questions just send an e-mail and I'll be happy to pass on additional info.

4353. Repeater near Lava Beds Nat'l Monument

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-25 00:00:00 UTC
From: lfloyd@sonic.net
Message-ID: <4qnqjp$ciu@ultra.sonic.net>
Source record: 222298

Does anyone know of a repeater up in the area around Lava Beds National Monument in north-central California?

Thanks!

Larry - WB5HHM

It means that Steve thinks the ARRL is dead. You know, American RADIO RELAY League. Maybe. But then again, it could be as meaningless as the rest of the 'can pigs fly' posting. If Steve is typical of most of the more profound posters here in this newsgroup, we'll never know as he won't be back to answer questions. Never saw any grain elevators fly, Zack, but I have seen a bunch of flying tin roofs....

As far as I have found out, yes, all units will be handheld. But, I
don't see it staying that way indefinitely. Maybe the bases will have
built in antennas too?

Chris, If your VE team sends in the results by E-mail, your call can well be issued in about a week. Just last week as I was watch ing for my wife's vanity call to com through, I noticed a call which I then heard on the local repeater. I congratulated the gentleman on his new call but he had it for a couple of months but said he had upgraded "last Saturday" and his info apperaed in the FCC files on FRI.ZIP. On a vanity call where the application was sent on May 30th, the license was dated June 6th. Can't ask for much better than that! Yeah, FCC!

>receive me fine, but would sound garbled on my end.

Yeah, he can slope detect you, but your receiver won't make much out
of his signal.

>The reason I ask is that I want to get into VHF non-repeater contacts,
>particularly DX. I have called CQ on the national calling frequency
>(144.200) a few times, but the responses have been garbled.

That's the national *SSB* calling frequency. Avoid using FM below
144.3 MHz. You'll annoy a lot of people with your wide signal down
there. 146.52 MHz is where you want to call using FM.

>Is there much activity as far as FM non-repeater communications go?
>Once I get this antenna up, will I have any trouble making contacts on
>the simplex range of the band?

That depends on your area. In some places there is a lot, in others
it is an echoing emptiness. With a good antenna, 5 watts can go a
long way. For example, you can work MIR on 145.55 MHz, and that's
about 400 km (straight up).

I'd start with 20 wpm. The idea is to make the character formation fast
enough that you are forced to learn the "musical" sound of the
characters an NOT count dits and dahs.

4372. Wanted - 7" (or bigger) centrifugal fan

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-26 00:00:00 UTC
From: davek@medphys.ucl.ac.uk
Message-ID: <1996Jun26.131232.46191@ucl.ac.uk>
Source record: 222118

I wish to purchase a centrifugal fan with a wheel diameter of at least 7" (178 mm).
It must be single phase and run at more than 2600 rpm from a 230 V 50 Hz mains supply.
If it was much larger (say 14" wheel diameter or more), 1300 rpm will probably do.

Please e-mail me the following (if known):

1) The price you want
2) The condition.
3) Wheel diameter
4) Wheel width
5) The details for the air outlet - ie is it a flange, or a pipe etc ?
6) Speed (rpm)
7) Make and model.
8) Motor power, or current
9) Where it could be seen/picked up from.

They were on the frequency first, so they had every right to
continue using it. Just because the ARRL publishes a schedule in
which it violates it's own principles of "Good Amateur Practice"
doesn't make it right.

Personally, I find the ARRL broadcasts to be great. But I detest the
fact that they never check to see that the frequencies that they use
are clear - it's as bad as some of the 80M nets that think they "own"
a particular frequency.

>She hates it FAR more than I do and made me negative on it.

Then she shows the same extreme stupidity that you do every time
you post here (no doubt, inherited).

There are many hobbies I consider stupid and a waste of time.
Since I don't like them, I don't waste my time pursuing them, and
I don't waste my time (and that of the fans of those hobbies) by
going onto their newsgroups and berating them for their choice of hobbies.
I don't miss them and I'm sure they don't miss me.

Since you seem to hate ham radio so much, if you were very intelligent
you would have long since realized that your time would be better spent
finding other pursuits you DO enjoy and spending your time on them, rather
than engaging in petty sniping and berating those people who like
ham radio.
You act as though you wouldn't miss us, and I assure you that we
wouldn't miss you (well, maybe a little bit... like one misses a
tooth ache after its gone). It'll be a "win-win" situation for
all of us.

Around here there are well over 20,000 newsgroups. Certainly
EVEN YOU could find one or two that you would like.

Source record: 222174

To help hams with the letter writing campaign recommended by the ARRL.

I have taken the liberty to write down some information that anyone can use in their FCC letter opposing any realocation of the 2 meter or 70 cm bands. The material is available at my web site. The information is provided to help those of you (including myself) who at times have some difficulty getting throughts down on paper. Feel free to use what you like, and if you would like to add some additional letter writing copy, just e-mail it to me and I will add it to the web page.

I have also established e-mail links to allthe FCC commissioners that are listed as the critical decision makers on this issue by the ARRL.

4380. LINKS TO ALL MEMBERS OF CONGRESS & WRC-97 & ARRL BAND THREAT PAGE

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-26 00:00:00 UTC
From: wb6siv@cyberg8t.com
Message-ID: <wb6siv-2506962119100001@host23.cyberg8t.com>
Source record: 222175

I have generated links at (http://www.sarrio.com) to all members of Congress that have e-mail addresses, and also to the WRC-97 mailbox, and the significant ARRL page that deals with the band take over issue.

I know there is a great deal of controversy concerning the best approach to take in fighting the LEO attempted take over of 2m and 440MHz. I am not saying that e-mailing to your Congressional Rep. or US Senator is the most effective approach. I do not know and can only guess at what method will work most effectively. I do believe that to DO NOTHING will definitly lead to significant freq. losses in the long run.

I offer a complete list of Senatorial and Congressional e-mail links to those who believe this is (will be) an effective approach to stopping this takeover effort.

I would suggest,however,that if you e-mail Congress, that you limit your e-mails to only your own district representative or state senator. Include your name and address, this will inform your representative that you are one of his/her constituent and he/she will be far more likely to seriously consider your letter. Also try to be civil and informative in your message, remember we need their support.

I have also added some letter writting matterial for those who find it difficult to put your ideas down into words. Feel free to use what you want, it's there for your use in the letter writing campaign.

>are performing a service. What percentage of hams do you feel fit
>into the same catagory as you do ? I honestly think that a very small
>percentage of hams participate in any type of public service activity.

In almost every group, 20% of the people do 80% of the work.
I have done quite a bit of public service work, technical training and
some technical experiementation, and I know quite a few other hams who
have done a LOT of public service work and done more in the other
areas than I have. But I know many hams who don't do much (if any)
work in these areas.
This ratio also is correct in professional groups, church groups,
civic groups... almost any group. Hams are no exception.

>In our local community here, that percentage is zero. Of the hams I
>know in the U.S., none pass traffic, none do phone patches, and none
>participate in any communications support activities for the public.

Perhaps you should introduce yourself to a new group of people (and
hams).

>If I see a traffic accident or someone broken down on the road, I
>call it in too, on my cellular phone. I will admit that I attended a
>few marathons here a few years back when hams were supposed to
>be providing communications support, but the activity was such a
>disorganized mess, that I and a bunch of other hams felt we were
>wasting our time standing on a street corner with an HT. So of all

Perhaps you could make a major contribution by helping organize
this activity.

>To me ham radio is just a hobby. I don't feel at all committed or
>obligated to anyone, as I passed the test to get a license and I
>paid for all my own equipment. I'm sure there are lots of hams who

Then you are resting on the laurels of those who do provide
emergency comms, public service, technical advancement, etc.
As you say, there are many other hams who feel as you do.
However, if you look at the regs, it's the technical and service
aspects of the hobby that justifies its existence.
Fortunately, there have been enough hams (so far) that *will* do
the work so we continue to deserve that justification.
One of the reasons I work in ham radio public service events, etc. is
that my parents raised me not to be a free-loader.

>If the FCC asked me tommorrow to answer one question,
>'What have you done to justify the existance of Amateur Radio' ?,
>I honestly would have to answer 'Nothing'. Unless passing out

Fortunately, I wouldn't have the answer "nothing". Many have done
more than I have, but I've at least pulled my weight within the
hobby and society.
Of course, your activities are the domain of your conscience and your
sense of duty (or lack thereof). To each his own, but we all will
suffer or enjoy the consequences.

I've been a ham since the late 50's and can't recall anything
in terms of renewal requirements having to do with code speed.
There used to be a requirement of a certain amount of operation being
done, but that wasn't restricted to any particular mode as I
recall.

Hi Gary,

It may well be so in theory,

But if I listen on the band, I always wonder why digital stations
are putting out extremely strong signals. OTOH, If someone set
aside 50 KHz for Pactor or clover, and this section got as busy
as a typical CW section, you can bet that the effective throughput
will be very low, because the stations will spend most of their
time sorting protocols, syncronizing et.c.

All BG know is how to get the most $$$ from the worst service,
If he can BUY all the R/F bands and start charging $$$ for using
them, he might start to come out with quite a few ham stuff, even
hiring people to make "MicroSoft Ham"... But it is impossible for
him to do so, so he just dump the market all together....

Consider what he says.... If OS/2 reach 1Million users, he would
restart OS/2 app development.... Well, OS/2 have over 12Millions
of users. And weeks before the OS/2 app development cut off, he
stated that there is no reason for him to stop OS/2 app development,
and yet, he stop the development a few weeks later.... I even have
a recording of Bill Gates saying "We believe OS/2 is the platform
for the 90's".... So much for a lying and cheating Businessman....

Like what other OS/2 user says, "If M$ won't support it, SO WHAT?
M$ isn't the only company in the world!" The same could be applied
to ham world.... M$ is only a GOD DAMN ISP and ISV, Gimme a BREAK,
do they have any measurable market share in ham software and hardware?
NOPE. They don't have any power in the ham world....

BTW: M$ lovers, check out PC World July 96' Page 101.

>Well, fill me in. What's your objection to Yaesu...nationalistic?

Nope, nobody here makes radios, and the big three are all made
in the same nation. Icom's HF receivers are far superior to Kenwoods,
that's why all the big contesters use Kenwood. The deader your
receiver, the less you hear the guy's transmitter who is sitting
next to you. Yaesu has had problems ever since the invention of
the transistor - they made fairly good stuff when we all used tubes,
but since then they have gone down hill dramatically. And Yaesu's
target market has always been 11 meters. After the 101's they
took 11 off the bandswitch, but they replaced it with a dipswitch
inside the radio, I guess so nobody would cut the wrong wire.....

I did see a Icom 706 (?) at field day last weekend, and I wasn't real
impressed with the receiver (HF) on it, it has the image problem on
CW that the 745 had. But it's a whole lot of bands for not a whole lot
of money, so it still looks like a good deal to me.

My observations are not based on labratory testing (Gary can fill you
in on that), just real world use. After having owned radios from all
of the big three, and having watched all the guys I started out with
do the same, seems like most if not all of us wound up with boxes
that say Icom on the front. In the last ten years I've also met a
lot of Japanese hams, and most I've met prefer Icom also.

I only have one piece of Ten-Tec equipment, that's a Titan amplifier.
It's probably the best piece of ham gear I have ever owned. I bought
it on the recommendation of another ham who has one, and some

other friends bought them after I did. None of us have been sorry we did buy them. Ten-Tec's service is miles above anyone elses. I've had a few minor problems, and Ten-Tec has responded immediatly to resolve them, no questions asked. I've personally witnessed a lot of RF amplifiers go up in smoke, but none have ever said Ten-Tec on the front. If I ever have to buy another amp, it's the only one I would consider. Ten-Tec amps aren't cheap, but when you buy an amplifier, the last thing you want is a cheap one.

When Bill Gates is ready for the ham bands, he won't have to murder
them or take them over with Kenwood's help. He'll just buy them.

I can't for the life of me figure out what the XX is for Frank.
Unless you want a (that) between the 'people' and the 'I'.
You're gonna have to get out your red marking pen and fix
that one for me. But make it to Micronesian English standards,
not Canadian English standards, we don't speak the Queens
English over here....

I don't use Wordstar, I use a newsreader called Agent. If it had a
spelling checker, I wouldn't use it. Because in my early days of
using internet I saw a posting pointing out that attacks on spelling
and grammar are the most trivial attacks around, and if someone starts
attacking spelling and grammar, it's because they can't find anything
else to attack. If I pointed out every spelling and grammar error I
see in this newsgroup, I would have more papers to correct than a
English teacher in a mental institution. Plus I'd never have time to
participate in all the important discussions that go on here. So us
experienced users of the internet just ignore those things, Frank.

Your internet lesson for the day.................

>Which newsgroups carry info on the GPS receivers?
>
>What does anyone think of the ICOM GP-22? I have noticed that it's price
>has dropped to about $300. Is this a good buy?

No. Buy a Garmin 45. I have both units, and the GP-22 is not in the
same league, even if it has finally come down to the same price.
Battery life for the GP-22 is poor, it loses track very easily, and
the user interface sucks. The car kit is also outrageously priced,
more than the basic unit. It does speak NMEA, but so does the Garmin.
When it was the only under $1000 GPS receiver, the GP-22 was tolerable,
but you can buy a much better unit for $300 today.

>I cannot speak much about the `450 .... but the TS-440S is a
>super rig. I've had one for about five years and had no problems

Echo the above comments. I own a 440 for the last 3 years, and have
a 690 (a 450 with 6 meters) at our club station on campus. Both
very good basic radios. 450 has a few advantages with new features,
but nothing real significant (switching CW sideband on receive is
pretty neat on the 450). Filter selection is simpler with the 450,
but roughly the same overall.

My 440 does not lack sensitivity at all....maybe the writer needs
an alignment for his. Not hard to do. I put three IRCI filters
in mine (a pair for SSB and one for CW) and my 440 stacks up
very well against the FT 1000, the TS 940, the TS 850 and the Ten
Tec OMNI VI. It hears as well as any of them on a clean band.
When heavy QRM appears very close by, I think my OMNI outhears
any of them, but it is not a big difference most of the time.

I heartily recommend the 440, especially if you can find one with
later serial number for, say, under $700.

4413. Re: VHF Operation Question...

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-27 00:00:00 UTC
From: Peter Coffee AC6EN <72631.113@CompuServe.COM>
Message-ID: <4qufn5$g9p$1@mhadf.production.compuserve.com>
Source record: 222059

6m contest operations center on 50.125 and up because this is the
designated calling frequency. When things bunch up, it's good practice
to wait for a moment of silence and announce "<Call sign> listening on
<frequency>", thereby drawing some people up off the calling frequency.
I usually wind up with three to five contacts, then go back to the calling
frequency and repeat the process.

There's every reason why 6m should be an outstanding Field Day band. You
tend to be farther away from the neighbors' TVs, so Channel 2 interference
is less of a problem than at your home QTH. (Most of my neighbors have
cable, and I have yet to have a complaint despite running 45 watts to a
beam at 26 feet above ground.) Six meters has transcontinental range,
a good many SSB operators, and I've had some good CW activity during contests
as well. And Technicians have full privileges on this band. Finally, the
beams are of reasonable size for field setup and operation. A terrific
Field Day band! (And I'd say that even if it hadn't given me almost one contact
per minute for the first half hour on the air that weekend...<grin>.)

Likewise looking forward to the remaining summer contests,

- Peter

Jim,

How do you know all this stuff, Burt lives 10,000 miles or so from you and you know he doesn't drink Wow that is impressive. On the same subject what is that "no-coders" comment in honor of? Careful Jim someone is going to call you a Code Nazi saying stuff like this.

73 Jerry

INTERNET SPACE WEATHER AND RADIO PROPAGATION
FORECASTING COURSE

(also see: http://solar.uleth.ca/solar/www/course.html)

Course Start-Date

This course is scheduled to begin on 29 July 1996.

An appropriate enrollment form and pricing is included at the end of
this announcement.

Course Prerequisites

There are no prerequisites to take this course. If you are interested,
sign and send the enrollment form. This course will not be a difficult one
for most people to handle. It will be visually-oriented with minimal math
involved and will increase in detail and complexity, building on the
framework previously taught and established.

By the time the course is completed, everyone who takes the course
should be able to forecast space environment and radio propagation conditions
with accuracies comparable to professional forecasters.

Course Completion / Duration

We are trying to emphasize that this course has no set completion date
or duration. People who take this course are allowed to take as long as they
need to finish it. If you go on holidays for 6 months and cannot complete it
until you return, that is no problem. Simply resume where you left off when
you are able to. We want this course to be an enjoyable learning experience,
not a taxing one. Most people who enroll also have full-time jobs and may be
time-limited. We recognize this and want everyone to realize that we will
continue to help students with this course whether it takes them 4 months or
4 years to complete it. Take your time. Enjoy it.

Course Completion Certificate

Although this course is not acreditted, students who complete the course
and pass the final exam will be given certificates certifying the successful
completion of this course. Final exams will be given to each student only
after they are ready to take it and specifically request the exam. After
receiving the final exam, students will have 24 hours to complete it and

return it to us through e-mail or FAX for marking. Students who fail to e-mail or FAX their final exams back to us within the 24 hour time frame will not be entitled to a certificate of achievement. This is the only rigid deadline imposed on the course.

Course Curriculum Reading Software

The following FREE software will be required to take this course. This software is available for most computer platforms, including:

* DOS
* Windows (3.x / NT / 95)
* Macintosh
* SDK
* UNIX systems (HP, SGI, and Sun supported)

The software is the ADOBE ACROBAT READER. This software is free of charge and can be downloaded at your convenience via FTP or WWW from Adobe (ftp.adobe.com/pub/adobe/Acrobat or http://www.adobe.com) or via our FTP system at: solar.uleth.ca in the subdirectories of "pub/solar/Software/Acrobat". Our FTP system is now connected to the Internet using a high-speed T1 line, so those who may have had slow downloads previously should notice a significant improvement in transfer speeds.

The use of the Adobe Acrobat Reader software has several significant advantages over other delivery methods. These include:

* Ability to incorporate complete graphical figures and high-resolution images into the lesson material for high-quality visually-oriented lessons.
* WWW-style links to other sections of the lesson material, allowing cross-references or bookmarks to be included.
* Support for imbedded digital video movies (AVI, MOV, MPEG, etc) if we should choose to insert movies of solar flares, etc.
* Wide compatability amongst most available computer platforms.
* Lessons can include links to WWW sites if you have Internet WWW access (not a requirement for the course).
* Lessons can be printed out on paper for those who would rather take the course on paper.
* There are security features available that are attractive.
* Compression features to reduce the disk-space requirements and download times.

Available Optional Course Material

This course will make use of a number of different IBM or compatible software products (designed for MSDOS 3.3 or higher systems or Windows systems running in DOS mode). The available software which can be used as part of the course curriculum includes the following, which can be ordered as part of the course when filling out the Course Enrollment Form appended to this announcement. This software is optional and will not be required to

successfully complete the course. But it will certainly provide greater hands-on experience:

1. PROPLAB-PRO Version 2.0 HF Radio Propagation Laboratory (normally sold for $150.00 to $175.00 USD).
2. Professional Dynamic Auroral Oval Simulator (normally sold for $100.00 USD).
3. BCAST Solar and Geophysical Database Manager (normally sold for $50.00 USD).
4. Extended Database containing sunpot numbers from the year 1818, solar flux values from the year 1947, and geomagnetic data from the year 1932 (normally sold for $50.00 USD).
5. IMPACT - Simple Computer Aided Coronal Mass Ejection Impact Assessment Software (valued at $50.00 USD).

Also available as part of the course curriculum, intended to be indirectly used as tools for the course, are our subscribable E-Mail Internet Services FOR ONE YEAR that include:

1. Daily Summaries of Solar and Geophysical Data (including all of the critical solar indices, geomagnetic indices, and statistics on solar flares, sunspot numbers, solar flux values, proton and electron fluences, neutron monitor and PCA statistics, etc).
2. Daily Summaries of Ionospheric Data (including ionospheric data from observatories around the world).
3. Daily Summaries of Auroral Activity (summarizing auroral activity for the last 24 hours and giving forecasts for the next 3 days).
4. Daily Summaries of Solar WIND Spacecraft Data showing directly measured solar wind velocities, densities, magnetic field parameters, etc.
5. Weekly Solar Terrestrial Forecasts and Reviews (which include complete summaries of activity in graphical formats as well as 10-day forecasts of geomagnetic activity, HF propagation conditions, auroral activity and potential satellite anomalies.
6. All Alerts and Warnings (warnings and alerts for major solar flares, geomagnetic storms, proton and PCA events, satellite anomalies and auroral activity).

These additional optional materials are not required to take the course, but will help you in developing your forecasting skills during and after you have completed the course.

Number of "Seats" Available

(Notice that this couse will be conducted entirely through the Internet via FTP or WWW in the convenience of your home or office. It does not require that you fly out and physically attend a class. Those who are interested in the course but do not have Internet access may also arrange to purchase the course on-disk. Contact us for pricing.)

Enrollment will be on a first-come first-served basis. There are an unlimited number of seats available.

Method of Course Delivery

Curriculum will be available for download via FTP or WWW on a weekly basis by all individuals taking the course. If you are away one week, the older material will remain on-line so you can catch up at your convenience. We now have a high-speed T1 line installed which has resulted in significantly faster FTP and WWW transfers. The transfer of course material using this method will therefore be more than adequate.

Course Assignments

There will be course assignments that can be completed and returned to us if desired. However, we are not going to enforce this. If you are too busy to complete course assignments, we certainly won't hold that against you. Whether you decide to work on the assignments or "hand them in" will be entirely up to you. The assignments are only intended to help hone your skills and test your knowledge.

Duration of the Course

We are not setting a strict deadline on when the course will be completed. That will depend to a large extent on when YOU want to finish the course. If you are able to keep up with the weekly curriculum releases, the course should take at least 3 months to complete. But you are not bound to follow this time-line. If you go on holidays or need more time to complete the course material, please do take your time. We will continue to provide you with the curriculum and help regardless of how long it takes you to complete the course. We want this to be an enjoyable learning experience, not a taxing one.

We Will Help

If parts of the course are particularly difficult to grasp, send us e-mail and we will try to clarify and explain the concepts using e-mail correspondence.

Revised Course Outline

The current course outline follows below. The order of the material listed below may not necessarily be the order in which they appear in the course curriculum. All of these topics will appear in the course.

COURSE OUTLINE FOR THE
INTERNET SPACE WEATHER AND RADIO PROPAGATION FORECASTING COURSE

Over 150 Topics Covered

Goal: To learn how to accurately forecast space weather and radio propagation conditions using information available on the Internet, through radio observations, and through studies using supplied computer software.

Upon completion of this course, each student should be able to formulate space-weather and radio propagation forecasts with accuracies comparable to professional forecasters.

Supplied: o PROPLAB-PRO Version 2.0 HF Radio Propagation Laboratory
o Professional Dynamic Auroral Oval Simulator
o BCAST Solar and Geophysical Database Manager
o IMPACT - Simple Computer Aided Coronal Mass Ejection Impact Assessment Program
o Extended Database of sunspot numbers, solar flux and geomagnetic data.
o Subscription to All STD Solar and Geophysical E-Mail Products (including alerts and warnings) for one year.

Total Value of the Supplied Material: over $580.00USD

The following topics and subtopics are currently scheduled to be included as part of the course curriculum. There will probably be many other subtopics included that are not listed here.

o The Sun
* Basics of the Sun
* Sunspots
- Types of Sunspots
- Sunspot Magnetic Fields
* Solar Radiation and Radio Emissions
* Solar Cycles
* Techniques for Modelling Solar Cycles
* Sources of Information and Imagery

o Interplanetary Space
* The Solar Wind
* Magnetic Fields
* Heliospheric Current Sheet
* Solar Sector Structures

o The Earth
* Magnetosphere
- The quiet magnetosphere
- The disturbed magnetosphere
- Understanding and Deriving Magnetic Indices
K-Indices
A-Indices
Auroral Electrojet (AE) Index
DST Index
- Magnetic Storms
Sudden Storm Commencements (SSCs)

Gradual Storm Commencements
- Geomagnetically Induced Currents (GICs)
Effects on Electrical Hydro Systems
Effects on Other Long Conductors
* Ionosphere
- Formation of Ionospheric Layers
- Factors Affecting Ionospheric Layers

o Solar Disturbances
* Transient Solar Coronal Mass Ejections (CMEs)
- Types and Structures of Coronal Mass Ejections
- Understanding the Importance of CME Structures
- Inferring CME Structures from Available Solar Data
- Coronal Mass Ejection Detection Methods
- Using IMPACT (software) to Aid in CME Disturbance Predictions
- Solar Cycle Dependencies
* Solar Flares
- Basic Nature of Flares
- Types of Flares
- Flare Rating Systems
- Significance of Proton Flares
- Ground Level Events (GLEs)
- Fast Transit Events
- Interpreting Magnetograms
- Determining Magnetic Shear and Flare Susceptability
- Solar Flare (and Proton Flare) Prediction Techniques
- Solar Flare Related Coronal Mass Ejection Prediction Techniques
- Sources of Solar Flare Information
* Solar Coronal Holes
- Coronal Hole Basics
- Recurrence
- Solar Cycle Correlations
- Associations with Near-Relativistic Electrons
- Coronal Hole Related Disturbance Prediction Techniques
* Filament Eruptions
- Filaments and Prominences
- Eruptive and Non-Eruptive Activity
- Filament-Associated Coronal Mass Ejections
- Filament-Related Disturbance Prediction Techniques
* Possible Lunar Influences
- Interaction with the Geotail

o Auroral Activity
* Basic Theory of the Northern/Southern Lights
* Behavioral Characteristics of the Auroral Ovals
* Sensitivity to Solar Disturbances
* Affects on Satellite Health and Radio Communications
* Mathematical Models of the Auroral Zones
* Auroral Activity Prediction Techniques
* Information Sources

o Conditions Affecting Satellite Health
* Satellite Orbits
- Geosynchronous
- Sun synchronous
- Polar
- Properties of Lagrangian Orbital Points
* Atmospheric Drag
* Surface Charging Anomalies
* Deep Dialectric Charging Anomalies
* Interplanetary Shocks
* Magnetopause Crossings

o Postulated Sun/Earth Climate Connections
* Possible Long-Term Climatic Trends
- Rainfall
- Temperatures
- Atmospheric Pressure
- Storm Tracks
- Ozone Correlations
* Possible Short-Term Meteorological Trends
- Pressure and Winds
- Lightning
- Storm Systems
- Ozone Responses

o Radio Propagation
* Basic Theory (Non-Technical)
- Characteristics and Components of Radio Signals
- Understanding Plasmas
- Importance of Electron Collisions
- Appleton/Hartree Contributions
- Signal Polarization and Coupling
- Ionospheric Absorption
Deviative Absorption
Non-Deviative Absorption
- Fading
- Multipathing
- Travelling Ionospheric Disturbances
- Solar Related Disturbances
- Structure of the Ionosphere
Ionospheric Layers
Importance of Sporadic-E
Effects of Spread-F
Solar-Cycle Dependencies
Models of the Ionosphere
x Simple Mathematical Models
x Numerical Maps
x CCIR
x URSI
x The International Reference Ionosphere (IRI)
x Others
* Probing the Ionosphere

- Probing Techniques
- Probing Instruments
- Sources of Ionosonde Information
* Basic Ray-Tracing Concepts
- Ordinary vs Extraordinary Signals
- Becoming Familiar with Ray-Tracing Software
* Ray-Tracing in Three-Dimensions
- Ray-Tracing Software Considerations
- Preparing for 3D Ray-Tracings
- Performing 3D Ray-Tracings
- Studying 3D Ray-Tracing Results
* Vertical Radio Signal Propagation
- Signal Reflection Behavior
- Critical Frequencies
- Ray-Tracing Vertically-Incident Signals
* Oblique Radio Signal Propagation
- Signal Refraction/Reflection Characteristics
- Effects of Geomagnetic Activity
- Effects of Solar Activity
- Ray-Tracing Obliquely Incident Radio Signals
- Determination of Maximum Usable Frequencies
Simple Empirical Methods
Ray-Tracing Techniques
- Effects of Sporadic-E
- Non-Great-Circle (NGC) Propagation
Responsible Conditions
Compensation Methods
Ray-Tracing Techniques to Analyze NGC Propagation
- Chordal-Hop and Inter-Layer Ducting Propagation
Advantages and Disadvantages
Analysis using Ray-Tracing Techniques
Detailed Ducting Analyses
- Searching for and Exploiting Exotic Propagation Paths
Properties of Exotic Paths
x Auroral-Related Non-Great-Circle Propagation
Searching for Exotic Paths using 3D Ray-Tracing Techniques
Determining the Most Reliable Exotic Radio Paths
* Ionospheric Disturbances
- Solar Related Disturbances
Solar Flares and Related Coronal Mass Ejections
Coronal Holes and High Speed Solar Wind Streams
Filament Related Coronal Mass Ejections
Impact of Flare Related Radio Noise Bursts
- Short Wave Fadeouts
- Sudden Phase Anomalies
- Sudden Frequency Deviations
- Devastating Effects of Polar Cap Absorption
- Disturbances and their Effects on Satellite Communications
* Radio Propagation Prediction Methods
- Short-Term Forecasting Techniques

- Medium-Term Forecasting Techniques
- Long-Term Forecasting Techniques
- Sources of Forecasting Information

o Applied Forecasting Techniques
* Climatology
* Pattern Recognition
* Compiling Necessary Information
* Exploiting Databases
* Computer Related Aids
* Studying Real-Life Examples
* Developing Experience and "Intuition"

o Field Experience
* We present you with some specific historic real-life scenarios. Using the information and techniques studied in this course, you are asked to develop your own space-weather and radio-propagation predictions. The actual real-life impacts are then studied and compared with your forecasts.
* We present you with several hypothetical (possible future) examples and ask you to develop your own forecasts.

o Course Completed

INTERNET SPACE WEATHER AND RADIO PROPAGATION FORECASTING COURSE
ENROLLMENT FORM

I am interested in taking the Internet Space Weather and Radio Propagation Forecasting Course scheduled to begin on 07 June 1996.

I AM INTERESTED IN TAKING THE FOLLOWING COURSE VARIANT:

[ ] - The Full Course without the accompanying computer software or subscribable e-mail services for $250.00USD.

[ ] - The Full Course WITH all accompanying computer software, but WITHOUT the STD E-Mail subscriptions to all Daily Solar and Geophysical Products, all Weekly Products and all Alerts and Warnings for one year for $300.00 USD.

[ ] - The Full Course WITHOUT the accompanying computer software, but WITH all STD E-Mail subscriptions to all Daily Solar and Geophysical Products, all Weekly Products and all Alerts and Warnings for one year for $300.00 USD.

[ ] - The Full Course WITH all accompanying computer software AND WITH the STD E-Mail subscriptions to all Daily Solar and Geophysical Products, all Weekly Products and all Alerts and Warnings for one year for $350.00 USD.

CHOOSE ONE OF THE FOLLOWING:

[ ] - I need the computer software postal mailed to me on 3.5" high-density disks to the address written on the *REVERSE* side of this order form for an additional $40.00USD which includes shipping and handling.

[ ] - I expect the Solar Terrestrial Dispatch to notify me via e-mail of the Internet FTP and WWW procedures to obtain the computer software.

CHOOSE ONE OF THE FOLLOWING:

[ ] - Please inform me of the FTP/WWW procedures to obtain the FREE ADOBE ACROBAT READER software over the Internet, required to read the course material.

[ ] - Please ship me the ADOBE ACROBAT READER software on 3.5" HD disks (for IBM or compatible systems only) for an additional $10.00 USD.

TYPE OF COMPUTER AND OPERATING SYSTEM THAT WILL BE USED TO TAKE THIS COURSE:

_____

MY E-MAIL ADDRESS IS:_____

MY BACKUP E-MAIL ADDRESS IS: _____
(if available)

MY VOICE TELEPHONE NUMBER IS: _____

MY FAX TELEPHONE NUMBER IS: _____

TOTAL AMOUNT INCLUDED FOR ENROLLMENT, INCLUDING ANY ADDITIONAL AMOUNTS REQUESTED FOR SHIPPING SOFTWARE, ETC, IN UNITED STATES CURRENCY ONLY:

$_____._____ U.S. DOLLARS

SELECT THE PAYMENT METHOD:

[__] - I am paying by check or money order.

[__] - I am paying by VISA and will FAX this order along with my VISA Card number, Valid-From Date, Expiry Date, Postal Mailing Address, and phone number to the STD FAX number: 403-756-3008 or if that line is busy: 403-756-2380.

I have remitted a check or money order (IN U.S. FUNDS) for the above amount to the "Solar Terrestrial Dispatch" at the following address:

Solar Terrestrial Dispatch
P.O. Box 357
Stirling, Alberta
T0K 2E0
Canada

FAX: 403-756-3008 or if busy: 403-756-2380

I understand that course material (lessons) will be made available on a weekly basis for anonymous FTP and WWW from the Solar Terrestrial Dispatch and that I will be notified via e-mail of the FTP/WWW and other procedures

required to obtain the lesson material and read it on my computer. I also understand that there will be no refunds for the course should I be dissatisfied with the course or the included software or services.

By signing below, I agree that I will not share copies of this course with any other individual(s) through any means without the expressed permission of the Solar Terrestrial Dispatch. FAILURE TO SIGN AND DATE THIS FORM WILL VOID YOUR ENROLLMENT APPLICATION.

Date: _____, Signed: _____

Please Print Your Signed Name Here: _____

I don't have problems with my RS HT. Mine has been dropped many times without breakage. I did have a solder joint fail once, sent it in, got it fixed, and received it in 3 days. It's going on 3 tough years of use. It's gotten wet, dusty, dirty, and down right abused in some cases. Keeps running. My dad has one too and hasn't had a problem either. Now the new ones may be bad but I know they made good HT's at one time.

I just sent for an Alinco DR-150T to put in my rig. I don't want to take the CB out as I use it for traffic info near large cities and to keep from getting run over by log trucks when I go into the mountains. I plan on putting in a combo antenna where the AM/FM one is now. I don't care about getting out because I mostly listen.

If I put out 25-50 watts from the 2m antenna a couple of feet away will it hurt the CB or standard radio even though the freqs are a lot different. I am also wondering about putting a 2m and a hf antenna in my attic. How much separation is required between antennae on different bands?

Oh no, the songspiration is upon me:

Ole Morse Code Is Here to Stay

Ole Morse Code is here to stay,
It will never die.
It was meant to be that way
Though I don't know why,
I don't care what no-code Techs say,
Ole Morse Code is here to stay.

Ole Morse Code is here to stay,
We'll dig it to the end.
It'll go down in history,
Just you watch my friend.
Old Morse Code will always be,
It'll go down in history.

Repeat first verse.

Sung to the melody of "Rock N Roll Is Here To Stay" as sung
by Danny and the Juniors.

Adapted by Curt KD4YU, an EXTRA class ham. :-)

Curtis, I will agree "setting" one up is no big deal, however try to make
one actually useful..add an enet card to the exisiting modem, SB32, VGA card
typical config and do it such that 5 or 6 different programs ALL work, I think
you would be suprised how poorly they perform, without reload, reboot, reconfig
etc... Better yet try and run some of the more "powerful" software and see
how quickly it comes to it's knees..

stuff deleted..

> ready to be used, even though they are preinstalls.

Not to change the subject but after spending the last 5 years in "higher"
ed (colleges), I think some folks are better off flipping burgers, as they
have little ability to survive inthe real world. They are being taught
archaic things, not basics mind you, which they could use, but useless
stuff because faculty doesn't want to budge and learn soemthing new or better.
There ar exceptions, but for the most part, CS people are graduating without
ever looking into a PC or understanding the basics...like EE's used to learn.
I agree some stuff is being rushed to market, but that is what the public
wants or will settle for.

Stuff Deleted
Once the net-newness wears off, which it will, because it willnot and cannot

be everything we want it to be, without a cost that no one wants to bear, computers may go back to being auseful tool, not some status bar for all to belly around to....every needs a whiz bang pentium to surf with like they need a hole in the head....how about some truly fast IO, and don't give me the ATM crap..it'll be years before it is practical if then

30wpm for typing is lame, 30wpm for copying code is exceptional.
Bad comparison.

1200 baud packet facts:
1200/11 = 109 bytes per second potential
109/5 = 21 words per second potential
21*60 = 1260 wpm potential
^^^^^^^^
Facts:
World record typist - 120wpm
World record CW copy - 76wpm

My guestimation below:
Average typist - 40wpm
Average CW copy - 15wpm

============== response GM0CSZ / KN6WH
I don't know the capabilities of this receiver, but handheld GPS
devices from other manufacturers ,like Garmin are slightly below this price.
Before you buy any make,ensure you have the full spec and make up
your mind for which purpose you are going to use it.
If it's on a hiking or x-country skiing trip or trip in an open boat
,buy a model with integral antenna. If you want to buy it for use in
a car ,get one with a removable antenna (say Garmin 45 ,or later
model) and make sure an external power supply between 8 - 30 Volts
can be connected
If you intend using the device outside your own country ,ensure it
can be set-up for mapping formats and data world wide . Have fun with
your (future) GPS.

WASHINGTON (AP) - U.S. Senator Daniel Akaka wants the federal government to give the state of Hawaii jurisdiction over seven U.S. possessions in the Pacific region.
Akaka's "Insular Areas Consolidation Act of 1996" would transfer jurisdiction over Baker Island (KH1), Jarvis Island (KH5), Howland Island (KH1), Johnston Atoll (KH3), Kingman Reef (KH5K), Midway Island (KH4), and Palmyra Atoll (KH5) to Hawaii (KH6).
The bill was prompted by the revelation that the new owners of Palmyra Atoll - KVR Inc. of New York - want to create a nuclear waste storage facility there. The Hawaii congressional delegation and state officials oppose the proposal.
"My legislation will give the state of Hawaii a stronger voice in the fate of U.S. possessions in the Pacific that currently are not part of any state or territory," Akaka said.
Similar legislation was introduced in the House last year.

<remainder of article deleted>

I wonder if these will still be seperate DXCC "countries" if the consolidation act passes Congress? If the act does pass, they'll all belong to Hawaii, thus they might all be designated as just KH6.

4444. RE: Proof Ham Radio is Dying

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-27 00:00:00 UTC
From: gsturm@usa.pipeline.com
Message-ID: <4qt7vp$etc@news2.h1.usa.pipeline.com>
Source record: 222121

So Kenwood and Microsoft agree that ham radio is dying??

Microsoft is a computer software company-- what gives them enough "expertise" to make a profound statement regarding amateur radio?? They should stick to what they know best, which is computer software. I will place all Microsoft statements regarding amateur radio in the circular file.

Kenwood is a commercial outfit selling electronic equipment to various and sundry users-- some of whom are ham radio operators. Their main interest is selling more equipment-- to whomever will buy it. In this case they seem to be courting people who might become "no-code techs" so that they can sell the new hams some nice new handtalkies. The Kenwood "doom and gloom" is keyed to their "bottom line"-- which may be affected by competition rather than the demise of amateur radio.

Ham radio isn't dead until the fat transceiver burns out.

Glenn, KJ4TK

I'm posting this message for a friend. If anybody can be of assistance, could you please send a copy of your reply to my e-mail address as well (as I don't normally monitor this newsgroup).

MESSAGE:

I have an SG2000 HF transceiver as a base station to which I have connected an SGC Tel-two telephone patch. The patch is manual, thus requiring an operator to be present.

I would like to automate this system such that I can use it whilst I am mobile on HF in remote locations. I thus need to be able to pick up the phone, dial a number, switch the patch on and off and put the phone down from my mobile HF station. Can anyone give me an idea of how to do this??

Brendan

According to my callbook, you still hold a Tech license. If you want
to get rid of the csc, apply to the FCC to upgrade your license
certificate to one which states your license class as Tech Plus. The
introduction of `Tech Plus' as a separate license class instead of
being just the informal name for `Tech plus Novice' may have been
after you passed your 5wpm test.

4458. help ID Motorola part numbers

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-27 00:00:00 UTC
From: David.Bourque@analog.COM
Message-ID: <199606271204.AA23997@adinet.analog.com>
Source record: 222135

Greetings all, thanks for the bandwidth.

I am in need of some help identifying some Motorola surplus equipment I recently acquired. I have what I believe to be a Motrac vintage rack with supply, receiver, control cards, transmitter and amplifier. It is the supply and amplifier I'm interested in. The amp has a number TLD6612A and the supply is TPN1041B. I also have another supply and amp from another rack. These are numbered TLD6622A2 and TPN1046A3. My questions are these. What band did these amps operate in? What power class are they? Does anyone have any documentation on these items that they would like to share? Has anyone ever converted one of these amps for LINEAR operation in the ham band? If so, what does it take?

I have also recently picked up a Motorola receiver that is rocked for 956.2625. I need some documentation for this thing as well.
The unit is model C04RTB-1108C, receiver strip is TRF1032A, Chassis is TLN1991A, Backplane is TRN6090A, Power supply is TPN1158A. Two other cards and the squelch gate and audio control but I didn't write down the numbers. Does anyone have any documentation to share on these items? Has anyone ever moved one of these down to 927 Mhz? If so, what does it take? I want to use it as a link receiver for a remote repeater link.

Thanks for all the help. Reply via direct email please. I don't always have GOOD access to the net and can only post via "Info-Hams". Thanks again.

Concur. I've been a member of ARRL and a reader of QST for a lotta years, but I cannot condone the ARRL's announced policies of broadcasting on amateur frequencies without first checking to see if the channel is clear. There is always the danger that someone might be conducting emergency traffic on the frequency. The potential harm that ARRL's policy could cause in such a situation is obvious.

I submit that 99% of hams have no idea either what freqs W1AW broadcasts on, or when they do it. I know I don't have the time or inclination to keep track of such information.

>73 de KA9YZB

I cannot speak much about the `450 .... but the TS-440S is a
super rig. I've had one for about five years and had no problems
or disappointments with it. It began as a fixed station, has
seen some use portable, and is now a mobile.

Output power is a little over 100W (PEP) on all modes. Reports
received on CW, SSB, and FM (don't use AM) have all been good
(not necessarity signal strength but quality of the signal). RX
sensitivity could be better but it's not bad enought that I'd
consider adding a preamp. Noise blanker works great! Antenna
tuner, although not the most efficient, is accurate and asy to
use. Yup, I like it .... and wouldn't even consider selling mine
at the "bargin-basement" prices I've seen.

I have a `850 in the house. Presuming it's much like the `450
but with a few more "goodies", the latter should be a good rig
too. A little smaller (not much) than the `440 and maybe a
better RX; the TX, though, is rumored to be the same as the `440
with some (A-F) refinements for the digital modes.

I've also had a Yaesu (FT-747) and prefer the TS-440. Never
owned an Icom HF radio.

Any questions? Feel free to E-Mail.

>inside the radio, I guess so nobody would cut the wrong wire.....

I suspect you'll get a lot of argument about your comments above.
Though I own Icom HF equipment, an IC-735 and an IC-706, I must say
that Icom is in second place for HF transceivers compared to the
newer Yaesus. At the top of the line, the FT-1000 simply blows
Icom and Kenwoood away, and the FT-990 and FT-900 aren't bad in
their price classes either. Kenwood HF gear is also pretty good,
if you can keep it working. The big problem with all the recent
Kenwood gear is reliability. (And their VHF/UHF gear has always
sucked.)

>I did see a Icom 706 (?) at field day last weekend, and I wasn't real
>impressed with the receiver (HF) on it, it has the image problem on
>CW that the 745 had. But it's a whole lot of bands for not a whole lot
>of money, so it still looks like a good deal to me.

It is a good deal, for what it is. It is not a top of the line rig,
though I must take issue with comparing it to the IC-745. Now that
was a truly awful radio. It suffered even more from front end overload
(all the time) than the IC-706 does when the IC-706 preamp is on (you
should leave the preamp off on HF, you never need it). The IC-706 does
let you reverse sidebands in CW mode, which does get rid of most problems.
There is a bit of filter blowby (I assume the rig you saw was fitted with
the optional CW filter, without it the IC-706 is totally unsuitable for
CW or digital), but it isn't nearly as bad as the old IC-745. That thing
was a real turkey. The IC-706 isn't as good as the IC-735, but then few
radios are (and all of those are lots bigger and cost lots more), and

the IC-706 is smaller still, and does offer 6m and 2m.

>My observations are not based on labratory testing (Gary can fill you
>in on that), just real world use. After having owned radios from all
>of the big three, and having watched all the guys I started out with
>do the same, seems like most if not all of us wound up with boxes
>that say Icom on the front. In the last ten years I've also met a
>lot of Japanese hams, and most I've met prefer Icom also.

Like I mentioned, I've got two Icom radios now, but I've owned
Kenwood, Yaesu, Ten-Tec, Drake, National, Hallicrafters, Heath,
SBE, Galaxy, Johnson, B&W, Collins, etc over the years. The Icom
radios aren't the absolute best in raw performance. Of all those
I mentioned, the FT-1000 is the best in raw performance. But there
are more issues than that for me. I want a small radio today, and
I want one that is well built mechanically and thermally. In the
small radio class, that's Icom.

But if I were fielding a big contest station, all the radios would
likely say Yaesu on the front. Though if I could keep them running,
they might say Ten-Tec (you *need* that great factory support). They
would not say Kenwood unless I had at least four sets of spare radios.
That way maybe I'd have one radio that worked when I needed it.

Gary

If you guys were paying more attention to reality, you'd already know that Bill Gates and Microsoft have disclaimed any lust for the 2M and 70 cm bands. MS and Apple are major players in reallocating the 5.8 GHz ham band to low-power unlicensed computer networks. They need much more bandwidth for the RF network protocols they have developed, and those boxes are already in production!

My Ten-Tec radios have never had to go back for service in all the years I have owned them. The receivers are fantastic and the audio quality is higher than any other radio I have owned.

Don't know what you are doing to your Ten-Tec stuff to give you problems.

From Tad Cook, KT7H
Seattle, WA June 28, 1996
To all radio amateurs

SB PROP ARL ARLP026
ARLP026 Propagation de KT7H

Solar activity is still very low, although there were visible spots
on the Sun's surface every day this past week. Average solar flux
was up about 3 points, and the A index was in the single digits.
Solar flux peaked up just over 70, and it is expected to drop below
70 around July 7, reaching back up to 70 again around July 17.
Around July 16 is when we could see a slight recurring geomagnetic
instability, although some smaller disturbances could appear also
around July 2, 3 and 14.

Sunspot Numbers for June 20 through 26 were 22, 33, 23, 23, 25, 23
and 25, with a mean of 24.9. 10.7 cm flux was 69.7, 70, 69.7,
68.6, 72.3, 71.9, and 71.8, with a mean of 70.6.

4476. N.E.W.S. VHF Ham Webpages URL change

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-28 00:00:00 UTC
From: klimas@uhavax.hartford.EDU
Message-ID: <009A485B.5BCE1FA0.92@uhavax.hartford.edu>
Source record: 221953

The N.E.W.S. VHF page new URL is http://uhavax.hartford.edu/~newsvhf
Note the only change is the addition of the tilde (~).
Good news is the old URL still works, but now we have shorter URL's
for all of our sub-pages, for example some of the more popular ones:
http://uhavax.hartford.edu/~newsvhf/beacons6.html
http://uhavax.hartford.edu/~newsvhf/beacons2.html
http://uhavax.hartford.edu/~newsvhf/contests.html
http://uhavax.hartford.edu/~newsvhf/events.html
http://uhavax.hartford.edu/~newsvhf/ham-www.html
http://uhavax.hartford.edu/~newsvhf/vhf-www.html
http://uhavax.hartford.edu/~newsvhf/vhf-news.html
http://uhavax.hartford.edu/~newsvhf/vhfbig.html
http://uhavax.hartford.edu/~newsvhf/vhfconf.html
(the last one is for our VHF/UHF Conference)
-Enjoy and feel free to link, Ron WZ1V, N.E.W.S. webmaster.

4477. HAM-server Information

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-28 00:00:00 UTC
From: server@GRAFex.sbay.org
Message-ID: <gate.836028916@GRAFex.sbay.org>
Source record: 221954

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
====================

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
=====================

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order
UUDECODE.BAS or UUDECODE.C and UUEXE536.ZIP. Compile on your
system then uudecode UUEXE536.ZIP. This is a archive of UUENCODE

and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP
(plus other stuff). Will dearchive PKUNZIPped files, as well as
UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a
utility, such as StuffIt to decode. There are also UUDECODErs
and other de-archivers available. See the index for
/hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==

o If you are ordering from a ccmail system, be advised that ccmail
in its default configuration attempts to automatically UUDECODE
files. If your order is sent in parts, it will hiccup after the
first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite
regularly with messages. And, since the path is incorrect, I cannot
contact you to let you know. Try the PING command to check that
the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file
for correct syntax.

o The file name has changed since the INDEX was generated. Order a
new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post.
Orders are only honored when sent to HAM-server@grafex.sbay.org.
That's the way the software works.

YOUR HELP IS NEEDED:
====================

If you have a program you would like placed on HAM-server, you can email it
uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I
need to take care of quickly.

I seem to remember stories by some of our POW's about how they
communicated by tapping out CW on the side of the cell. Perhaps they
will be given lap-tops and internet accounts in the future, since no one
will know CW any longer?

My 9 & 10 year old boys think my HT is 'really cool' and would like to get their own. In a moment of fatherly love (and perhaps feeble-mindedness) I told them if they could each get a Tech license, I'd get them each a 2m HT (nothing fancy, something with thumb-wheels and such, like an IC-2AT). Well, it looks like they may soon do it. My question is: What type of behavior is appropriate for kids on amateur frequencies? I'm sure they're not going to spend time talking about their rigs and when the next hamfest is. Is it ok to let them operate simplex at low power and have fun looking for frogs by the river (and whatever kids think is fun)? I guess in my opinion, if they're not tying up a repeater, and following regulations, it would be all right...? I'm fairly new to this area, and the last thing I want to do is get a bunch of local hams ticked off at me.

Thanks

Chris Davis
(BTW, I passed my Tech exam, and am now waiting for my calls. Thanks to all who wished me luck.)

I know a few of you have been bothered by messages posted to these and other amateur newsgroups by K1oik in the last few days.

It saddens me to think that within the brotherhood of ham radio there are people who would go out of their way in an attempt to stain the character of a fellow ham.

I thought everyone would be happy to know that we shouldn't be bothered any further by this gentlemen, as his internet account has apparantly been terminated.

Whoever the little worm was, I hope he had fun while it lasted, and I would like to commend AOL for quickly pulling the plug on him. Amazing how easy it is to make a little piece of dirt disappear down the drain. I would also like to thank all the other hams who were involved in notifying AOL of the problem. Solving little problems like this are a shining example of what hams can do when they stick together as a group.

On behalf of the hams on internet I would also like to extend apologies to the REAL Burt Fisher, K1OIK, and tell him that we realized (well, most of us anyway) right from the first posting that the messages posted by this impersonater were no where near the quality or caliber of what Burt normally posts, and we hold him in no way responsible for anything posted by this second rate AOL imitation of a real ham.

You're right that it was no where near the quality - the imposter used real sentences with actual structure and coherence - that crack about CB being too intellectual wasn't bad!

If k1oink (sic) talks like he types, it's no wonder he's frustrated that no one will talk to him. To play the devil's advocate, one must be able to advocate with some degree of facility. <g>

>a recording of Bill Gates saying "We believe OS/2 is the platform
>for the 90's".... So much for a lying and cheating Businessman....

Let's be honest here for a change... Bill is a VERY schrew
businessman. I don't know when he said the quote above, but
at the time, he might have really believed it. As markets
change, a smart businessman changes with it. Only a complete
moron would favor a product owned 50% by his company over a
product he owns 100% that is gaining market share.

Let's get back to ham radio and leave the MS bashing to the
comp.* groups.

>Don't know what you are doing to your Ten-Tec stuff to give you
>problems.

At Field Day a couple year ago, one of our hot CW operators insisted on using his "good" TenTec rig instead of one of those cheapo "junk" IC-735. Forget the model of his Ten Tec, but it was the top of the line at the time. Looked very impressive. Unfortunately, it fell apart under tough conditions; first, it overheated and dropped down to QRP levels. Then the CPU went bananas... the rig would suddenly decide to scan the bands, change frequencies, change mdoes, etc. He took the rig home where it worked fine, so he brought it back to our FD site. Once again, it went nuts, finally shutting down completely. He had more respect for the "cheapo" 735s after that, since we had been using 2 or 3 of them each year with never a problem. His Ten Tec went back to the shop where they found absolutely nothing wrong.

Hmmm...

Just my 2 cents.

Francis, what, prey tell, are 'search and rescue certs' ? Are those,
like, breath mints you eat while you're out in the woods looking for
lost people with your hound dawg, or what ? Do they keep the dawg
from loosing the sent because of your bad breath ?

Just curious. We have regular certs here, and the mint ones, but never
seen search and rescue certs in any of the stores. Course, most of
our rescues here involve the ocean, and it would be hard to eat breath
mints while you were scuba diving, so maybe that's why the never
caught on over here.

Do I care what Burt thinks?
No.

Do I know a kid who'll use his gear?
Yes.
12 year old.
Sails, plays soccer, paints, plays piano and latin percussion,
has a successful small business, wants to visit FIJI, and is studying
French in preparation for a trip to France next summer.

Normal?
I can't understand anyones desire to be normal!

Is any vendor producing a truly rugged stainless-steel ball-mount for 3/8-24 thread antennas? I have need to side-mount an Outbacker antenna on a slightly angular rear-quarter panel of an 4WD vehicle, and don't really like the NewTronics "Hustler" mount construction all that much. Years ago a mount was made by somebody else, I think perhaps a "Mark Products", that not only was very rugged and solidly built, but only required a single hole. Comments?

Who cares if they retransmit from a tall building, they can still only use .5 watts! Besides, how are they going to do all this with a BUILT IN ANTENNA! How many average Joes know how to hack the hardware enough to fix the permenant antenna situation. AND, if they do, how hard will it be to find an illegal retransmition site. Ect...

>pay 3 bucks for one. The counter guy at the electronics wholesaler
>is a virtual wealth of electronics information. Plus he's got a ton
>of books he can look stuff up in for you. Probably five or six people
>there that could build a TV set from scratch.

Good grief! I feel sorry for your situation, but I *highly* doubt anyone else in the world has to pay $3 for resistors! I paid about $8 for twenty or so capacitors, 25 or so resistors, and 10 germanium diodes. Averaging out to something like $.15 a piece? If they only carried coils! Of course, Rat Shack doesn't either.

>Please don't ask me why you should pay 3 bucks for a resistor

Can I ask who is selling them at $3 a piece? I am assuming normal small resistors, not huge industrial ones..

>when you can get three of them at Radio Shack for 19 cents,
>because I'll just respond by telling you that the free advice you
>get at Radio Shack is worth exactly what you paid for it - nothing.

Let's see... I can buy exactly what I want, in the quantity I *NEED*, with tips on where to get coils (since noone in town sells them, Rat Shack doesn't know what they are), for $.04 less on average. Hmm..

>Let's stop beating Radio Shack to death. They are just trying to
>provide us with what we want - cheap little electronic parts.

What I don't understand is this.. If you want people to stop beating on Rat Shack, why start a new thread when you *know* people are going to jump on the opportunity to beat on Rat Shack more? BTW, I do go there for small stuff sometimes because it's closer.. And their 8 foot ground rods are cheaper than anybody local, but that's about it. :)

Alas, you could buy the IC02AT, but Icom doesn't make it anymore,
and nothing they make today is its equal. Fortunately, Radio Shack
does still make it (or at least a reasonable facsimile). The RS copy
is about as robust as the old Icom, too. You thought maybe that out of
the tens of thousands of radios sold they'd all work perfectly forever?
Wasn't true when Icom made them, and it isn't true when Maxon makes
them for RS either. They are a hell of a lot tougher and more reliable
than anything Kenwood ever thought about making, though.

It must be nice to have resources like those in Louisville. For those of us who live in small towns, we are fortunate to HAVE a Radio Shack. There is one local place that calls itself an electronics store, but the last time I went in (about 3 weeks ago) the sales guy did not even know what coaxial cable was or if they had any. Fortunately, he let me look around in back and I found a couple of spools of RG8. I get the RS catalog, look and see if they have what I want. Otherwise it's mail order or drive 100 miles to get a connector. Sometimes you just don't want to wait. You may not get the best food at McDonald's, but they are convenient. Same for RS, lots of 'em around. I patronize ours and hope they stay in business (the RS, that is). From talking with the local store manager, I've gotten him interested in amateur radio.

>receiver, the less you hear the guy's transmitter who is sitting

Yep, that makes sense. All those big contesters want "deaf" radios
so they can't ear all of the weaker stations on the band, and on the
last day of the contest all they'll hear is the fellow big-guns they've
already worked.

Have YOU ever worked a contest, Jim? Perhaps not the contesters
you know, but all of the contesters *I* know want sensitive
receivers.

I judge brands on a radio-by-radio basis. I've owned Icom, Kenwood
and Yaesu HF rigs (as well as Drake, Heath, Hallicrafters and an
ATLAS, ARGHHHH!!!!!, you don't know junk, 'til you've owned an
Atlas) and Icom, Kenwood and Yaesu VHF rigs (as well as some
"wet-back", illegal alien-type imported rigs... remember Azden?)

There are good and bad radios in all of the brands.

Yeah, 6 CPS is claimed.

>I would also like to know where
>that -15dB is being measured. Is that at the speaker teminals of the
>receiver, or after the final filtering done by the TNC?

SCS doesn't say, but I would assume at the receiver audio output,
same place you'd hook headphones for manual CW.

>No, I don't expect you to answer these, just pointing out that claims
>are easily manipulated when worded broadly - i.e: The Maxon Antenna matcher!

I'd suggest that even the broadest interpretation favors the PACTOR II
claim. If the figure is measured after the DSP filters, then it is even
more favorable to PACTOR II, indicating that the advantage is gained due
to baseband coding rather than due to superior filtering plus coding.

>Still, in a recent review of different digital modes used by hams today,
>PACTOR II was head and shoulders above the rest. (July 1996 QST, pg 35)
>
>At 0dB SNR (not mentioned where that was measured, but I suspect at the
>receiver audio out terminals) the throughput was 6-7 char/sec.

Yeah, and the SCS web page says that continues down below 0 db. Note,
that is properly CNR not SNR, IE carrier to noise ratio. For CW they
are the same thing, but that isn't true for some other modulations and
codings.

>BTW - In a 250Hz bandwidth, we can copy morse at 20 wpm to
>very nearly 0dB S/N.

Perhaps some can, I can't, but PACTOR II is doing 72 WPM (6 CPS)
at signal levels 15 db lower than that, *error free*.

>> VHF/UHF packet certainly can play a role in disaster communications,
>> and has been used for logistic support in that role by a number of

>Actually, we are going have to reinvent packet for ALL modes. Of course
>the path is slow and painful in getting acceptance. Like VHF(and up)
>packet at 28.8K in the standard voice bandwidth(2700Hz)
>and without rig modifications.

That's unlikely to happen unless we make everyone use exactly
the same rig, and have exactly the same path characteristics
to every other station on the channel. The former might be
possible (though unlikely), but the latter is simply impossible.
Such subcoding requires a very well equalized channel with a very
good SNR, like a telephone line after training. It won't happen
with voice radios on a shared packet channel because there's no
way to equalize more than one pair of radios at a time, and no
way to assure equal path artifacts, IE multipath, SNR, etc. That's
why when we went to 56 kb we had to abandon the voice radio
paradigm and go to a true data radio with sufficient bandwidth
to avoid subcoding. Otherwise we couldn't connect to each other
at will.

>Ted F.
>N3SQY

Well look at what the average Joe did to CB. They are only supposed to put out 4 watts and I bet that over 80 percent of cb radios now a days put out more than that. The local CB shop here would "tweak and peak" your radio for 10 bucks and most every radio he sold there was peaked out before it left the shop. Now tell me if the FCC won't go after illegal CBers then where are they getting the manpower to go after illegal FRS users? If you ask me I think the FRS is a good idea but they needed to work on more of the details. They should have anyone that is using it at least obtain a license, even though there was no test. I know CB started out like this but if they keep strict control over it and really police it then it would work, but that ain't gonna happen so they should just abandon this silly idea until they get it right.

Message-ID: <31D48DB8.7DDA@juno.com>
Source record: 222046
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.digital.misc

This test is for ham radio operators:

1. Do you say QSL on voice?_____

2. Do you say "For ID" after your call?_____

3. Is it rare for you to have a contact longer than 20 minutes?_____

4. Do you check into traffic nets to up the "body count?"_____

5. Do you check into traffic nets for any reason?_____

6. Do you participate in contests and like it?_____

7. Are you overweight and hold an Extra Class license?_____

8. Have your worked more countries than the number of sexual encounters with your spouse?_____

9. Are you a regular on a two meter repeater?_____

10. Do you dislike children in general?_____

11. Do you ask for help and when received from a number of hams send out a general thank you to everyone in the world?_____

12. Do you think it is wrong to talk about politics or other interesting topics on ham radio?_____

How to Score:

Number of Yes answers:

2 or less- are you sure you are a ham?
4 to 6- you are on the edge of being human or ham.
6 to 8-you are a typical ham-very boring.
8 to 1O-check your pulse, if you find one re-take test.
1O or more. Call the funeral home, send your name into QST as a Silent Key.

Here is a summary of news items covered on edition #170 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 28-Jun:
-
1. Ham-Astronauts on the Shuttle Columbia Active on the Air
2. AMSAT Offers Shuttle Rise and Set Times on the Internet
3. NASA Select TV Provides New Camera Shots at Launch and Landing
4. National Frequency Coordination Council Selects Board
5. FCC Says Amateurs Not Following Form 610-V Instructions
6. Weekly Propagation Forecast
7. W2NSD Affirms "73" Unaffected by Chapter 7 Bankruptcy Filing
8. Military Communications Heard on Six Meter Band
9. Blackcomb Mountain DXpedition Set for VHF Contest
10. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
11. TI Employee Affirmed as Computer-on-a-Chip Inventor
12. "The RAIN Dial-up" from Chicago
13. Special Event Station Calendar
-
Funding for the program's transmission and production expense was
provided this week by a grant from Paul Nemmers, N0ZYT, of Prairie
City, Iowa, where "This Week in Amateur Radio" is heard on the KD0KU
repeater on 146.61 MHz serving Des Moines and all of Central Iowa.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
VHF/UHF repeaters throughout North America and on 160 meters at 1860
kHz. Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (email sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

: The problem will be the available ham gear that can be modified to FRS
: frequencies. UHF amps and noise makers are available for the
: fruitcakes that it will attract.
... as if making a low-power FRS available on splinter channels
makes this more likely than the higher-powered GMRS service makes it?
If someone shows up on my channel without proper ID, etc. I'll track
them down and turn them in if they don't comply with the regs.
I've done it before -- I'll do it again. If someone's running
wider-than-legal deviation with stronger-than-legal signal strength
on an adjacent (i.e. FRS splinter) channel, I'll do the same.

COLS COLUMN

THIS WEEK I BRING YOU AN INTERESTING ARTICLE FROM JIM VK2BQS.
IT RELATES HOW HE BECAME INTERESTED IN RADIO. JIM WAS ANARTS
20 METRE RELAY OFFICER FOR MANY YEARS BEFORE MOVING UP TO
KARUAH ON THE COAST JUST NORTH OF NEWCASTLE.
WITH LUCK AND CO-OPERATION I HOPE T0 BROADCAST THE PERSONAL
STORIES OF THE ANARTS COMMITTEE AND RELAY OFFICERS PLUS OTHER
STATIONS THAT TAKE THE CAST EACH WEEK. IN THE MEANTIME HERE'S
JIM'S ARTICLE. IT HAS BEEN EDITED TO FIT THE CAST. BY THE WAY
JIM TELLS ME HE HAS RECEIVED OVER THIRTY (30) CONTEST LOGS
ALREADY.

HOW TO GET HOOKED WITHOUT REALLY TRYING.

I WAS BORN 1922 IN PARRAMATTA NSW. ABOUT THE AGE OF FIVE I WAS
INTRODUCED TO THE MAGIC OF RADIO WHEN THE FAMILY ACQUIRED A
CRYSTAL SET.IT HAD A REAL CATS WHISKER, A LARGE COIL WITH TWO
TUNING SLIDES AND HIGH IMPEDANCE HEADPHONES, WAS BEAUTIFULLY
POLISHED WITH SHINY WOOD AND BAKELITE AND WHAT WAS MOST
IMPORTANT, IT WORKED. TWO PEOPLE COULD LISTEN, USING ONE
HEADPHONE EACH, NOT GOOD IN A THREE PERSON HOUSEHOLD. THE
PATIENCE NEEDED TO FIND THE 'BEST' SPOT ON THE GALENA CRYSTAL
BECAME AN ADVANTAGE TO ME IN LATER LIFE.
LATER WE OWNED A GRAMOPHONE AND A WONDERFUL PORTABLE FOUR
VALVE RADIO CALLED AN 'AIRZONE'. RECENTLY I SAW A RESTORED
MODEL OF THIS UNIT AT HAROLD BURTOFF'S COLLECTION. PORTABLE

WAS A BIT OF A MISNOMER AS IT WAS THE SIZE OF TWO BUTTER BOXES AND WEIGHED A TON DUE TO THE BIG BATTERY BANK. FAMILY FORTUNES DECLINED AND RADIOS WENT INTO OBLIVION, THE AIRZONE BATTERIES WERE UNAFFORDABLE AND THE CRYSTAL SET NO LONGER FUNCTIONED. BUT AN OLD DROVER LIVED NEXT DOOR WHO DID HAVE A WORKING CRYSTAL SET, AND AS A TEN YEAR OLD I WENT TO HIS PLACE TO LISTEN TO CRICKET ON SATURDAYS. IT WAS SHEER JOY AND I DECIDED TO FIND AND REPAIR THE FAMILY CRYSTAL SET. ALL PARTS WERE CLEANED AND POLISHED, AND THE WIRING REDONE AS IT HAD BEEN ALMOST DEMOLISHED. IT WAS NEVER ADMITTED BUT I SUSPECT DAD HAD TRIED TO IMPROVE THE RECEPTION WITHOUT NOTING THE ORIGINAL CIRCUIT. I TRIED EVERY COMBINATION OF WIRING WHICH I COULD DEVISE TO NO AVAIL.
I LOOKED IN THE 'PEARS CYCLOPAEDIA' 1931 EDITION, LO AND BEHOLD THERE WAS A 'WIRELESS SECTION' IN WHICH WERE RADIO CIRCUITS. THIS I STUDIED IN DISBELIEF, AS LOGIC SAID SUCH CIRCUITS MUST SEND ANY SIGNAL DIRECTLY TO EARTH, WHERE WAS THE MAGIC???, HOWEVER AS ALL ELSE HAD FAILED, WITH MUCH DOUBT I GAVE IT A GO AND IT WORKED. WONDER OF WONDERS. SO THE FIRST RADIO LESSON OF ALL WAS DRIVEN HOME, WHEN ALL ELSE FAILS, LOOK AT THE INSTRUCTIONS. THE FAMILY FORTUNES BEING ON THE UP WE OBTAINED A FOUR VALVE A.C. BROADCAST BAND ONLY SET.
I FOUND ABOVE THE BROADCAST STATION FREQUENCIES A GROUP OF STRANGE BEINGS CALLED AMATEURS. COMMERCIAL STATIONS CEASED OPERATIONS AROUND MIDNIGHT AND AMATEURS CAME ON AIR BROADCASTING MOST WONDERFUL MUSIC. (LEGAL IN THOSE DAYS). I FELT I KNEW THEM AS FRIENDS AND IT AWAKENED THE THOUGHT OF MAKING A XMITTER.
BACK TO THE CYCLOPAEDIA, AND THERE WAS A CIRCUIT FOR A RUDIMENTARY SPARK XMITTER. I HAD A COUPLE OF FAIRLY LARGE BRASS BALLS AND A VERY EFFECTIVE MAGNETO. DRIVEN BY THE TYRE OF A BICYCLE WHEEL THE SPARK COULD BE DRAWN OUT TO ABOUT FOUR INCHES. THE VOLTAGE MUST HAVE BEEN GINORMOUS, IT SURELY HURT IF SHORTED ACROSS THE HANDS. THE XMITTER WORKED AND WAS BROADBAND AS THE TUNING WAS ALMOST NON-EXISTENT, BUT IT COULD BE HEARD VERY LOUDLY ON THE RECEIVER INDOORS AND I HAD REPORTS FROM OTHER BOYS WHO KNEW OF MY 'FOOLING AROUND'.
AS A MEANS OF COMMUNICATION I SOON REALISED IT WAS USELESS, BUT FROM THERE ON I WAS HOOKED. I CAUGHT THE DX BUG AND BECAME QUITE EXCITED AT PULLING IN STATIONS FROM AROUND THE CONTINENT.

THANKS JIM FOR AN INTERESTING STORY, I LOOK FORWARD TO PRINTING A THUMBNAIL SKETCH OF YOUR CAREER AND LATER HAM RADIO INTERESTS.

WEEKLY SOLAR AND GEOPHYSICAL REPORT

(14 JUNE - 20 JUNE)

ISSUED ON 21 JUNE 1996

SUMMARY

Date 14 15 16 17 18 19 20
10cm 68 67 67 67 68 68 70
A 5 8 5 11 6 17 (8 ESTIMATED)
T 6 8 11 7 12 15 6

SOLAR ACTIVITY WAS VERY LOW DURING THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 14TH TO 15TH,
AND QUIET TO UNSETTLED FOR THE REMAINDER OF THE PERIOD.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE NEAR PREDICTED
VALUES, EXCEPT ON 16TH WHEN FREQUENCIES WERE ENHANCED TO 30
PER CENT.

FORECAST (21 JUNE - 27 JUNE)

SOLAR: VERY LOW

GEOMAGNETIC: QUIET TO UNSETTLED.

FREQUENCIES: NEAR PREDICTED MONTHLY VALUES

Tony, be aware that I have Al Gross's court documents giving him
priority of invention of the 1st handheld. And, I believe he used a
frequency over 250mhz for his HT's during WW2.

Ok Len, I accept that. Please tell me more.

But, over 250 MHz? I'd be very much surprised! Even after many
years (long ago) of my direct experience. One never knows all, though.

Nice to meet up with you. 73,

Are there that many new hams pounding on the door to use HF? Many that I talk with feel that HF and CW are going the way of the dinosaur. Most broadcasters, like VOA, military groups and private business are turning toward satellite communications. It will be the incompetent CWï¿½ers of the near future that may turn their backs on HF for more modern (and advanced) means of communications. Isnï¿½t that one of the ideas of amateur radio, to experiment and advance the technology? The future generation of hams might well not care if code is required or not.

Thankfully no. Itis being held to a dull roar.

> Many that I talk
>with feel that HF and CW are going the way of the dinosaur.

I disagree with what you say about HF. The HF frequencies will always
be part of the spectrum. The ITU will not agree to remove them.

> Most broadcasters,
>like VOA, military groups and private business are turning toward satellite
>communications.

Great news for 40 meters! Would you have the schedule for when this
will be implemented?

> It will be the incompetent CW�ers of the near future that may
>turn their backs on HF for more modern (and advanced) means of communications.

The competent CW'ers will then continue to use HF.

> Isn�t that one of the ideas of amateur radio, to experiment and advance the
>technology?

Didn't EME experimentation begin with the use of CW?

>The future generation of hams might well not care if code is
>required or not.

Please provide a shred of evidence. Every ham radio poll on this
subject contradicts your assertion.

I believe the main importer of ADI is:

Premier Communications
20277 Valley Blvd, #1
Walnut, CA 91789
(909) 869-5711

OTOH, the lowest prices I've seen for ADI products (or at least they
have free shipping for orders >$100) is from:

Artcom
P.O. Box 231326
Montgomery, AL 36123-1326
(800) 866-1011

I am not an employee of either company. This is just the results of
my own research into prices of ADI products.

I know Burt doesn't drink because he posted a message in this
newsgroup and said he doesn't. He's never lied about anything
else that I've read, so I doubt he would have any reason to lie
about that. As far as being called a code Nazi, we've already
been thru that phase of our ham life, Jerry, or were you absent
that day ? Don't forget what I told you about making little puffs
of smoke........ Why don't you answer your email ??

>
>30wpm for typing is lame, 30wpm for copying code is exceptional.
>Bad comparison.

Even worse comparison when you consider that copying code is more
akin to reading than to typing, IE typing is a sending process,
reading and copying are receiving processes. How many of us can
only read 30 WPM?

>1200 baud packet facts:
>1200/11 = 109 bytes per second potential
>109/5 = 21 words per second potential
>21*60 = 1260 wpm potential
> ^^^^^^^^

Potential is the key word in regard to packet. Those numbers are
valid for a continuous data stream (like a phone modem), but they
neglect protocol overhead and turnaround time. When those are
factored in, effective throughput drops down in the 300 WPM range.
With contention on the channel, the numbers drop even further.
In fact, most people consider 1200 baud packet excruciatingly
slow (not surprising when most of us can read 3 to 4 times faster
than that).

>Facts:
>World record typist - 120wpm

You sure? I type about that fast ordinarily, and I'm no world
record typist (but I do use a Dvorak keyboard).

>World record CW copy - 76wpm

Yeah, but if you compare like to like, compare that to 3,000 WPM
speed reading, or on the flip side, see if they can *send* that
fast with a straight key, IE without a *machine* to do it for
them.

>My guestimation below:
>Average typist - 40wpm

Hunt and peck? (We had to do 60 WPM to pass typing class.)

>Average CW copy - 15wpm

If that much (lots of Generals can't copy 13 WPM anymore, and I wouldn't be surprised if that were true for some Extras too).

You're obviously uninformed about Mr. Gates' joint venture with a BOC to put up LEOs. I'm sure he's thinking about ham spectrum, even if he doesn't think about hams. (Maybe he didn't want the hams to gripe about his efforts on _his_ network.)

Oh! I guess i didn't know about the poll. It's depressing when you realize no one care about your opinion. As for me I learned to send code when i was in Boy Scouts some years ago, only problem was that when I had to copy it I couldnt tell a dot from a dash. Yes, I know it sounds strange. Fortunatly no-code came along and one night I took my tests with perfect scores. I guess I will have to be content being incompetent with everything above HF, but I don't think I will loose sleep over it.

As for keeping CW requirements or not, I currently don't care one way or the other. I still belive the future will be a lot higher up the spectrum. If I am wrong thei I guess it will be my loss.

4562. Sharp filters for Drake TR-7?

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-29 00:00:00 UTC
From: K5ESW@nando.net
Message-ID: <4r25gd$pib@castle.nando.net>
Source record: 221966

A fellow ham operating overseas sent me the following question:

Some years ago, when a lot of people had Drake rigs, I
remember that there was a company called Sherwood Engineering which
was selling extra sharp filters for the TR-7 - or was it the old
R-4/T-4 line? They were advertising in both the CQ and the QST at the
time.
I do not intend to buy a new rig, but recently I have started to think
that the original Drake filters in my TR-7 are not very sharp. I have
the .25, .5 and 1.2 kHz for CW. Do you happen to know if Sherwood
Engineering still exists, and were their filters actually any better
than the original Drake filters?

Can anyone help with this ?

Right now it appears that the future for commercial radio is higher up in the spectrum. That is why 2mm and 70cm is threatened. I tend to believe that 2m/70cm is far more endangered than most hams would like to believe because I deal with legal regulatory issues. Amateurs only use small parts of the 2m band and only a small fraction of the 440MHz band. Meanwhile, 'society' is demonstrating a real commercial need for this spectral resource. How would a non-ham independent observer look at this? My guess is that he would suggest that amateurs give up the large portion of 2m not in regular use and perhaps all of 444. That's not what I would personally favor but I think that's the direction in which we are headed. The onslaught of e-mail to the WG will appear to be an organized protest and thus diminish much of its intended effect. The only way to keep the frequenies is to use them in a useful manner and it just may be too late for that. However, if this loss ever did come to pass, and we were allowed to keep all that we have of 10m, also grossly under-utilized, we would have more than enough sprectrum to recover our present utility on 10 meters. We could even use FM and repeaters, and after a few years we probably would never miss it. (Of course, YOU would need to learn code at that point). So I agree the the future is VHF/UHF/light. But It is not obvious to me that this is (or will be allowed to be) the future of the amateur service (except light). In fact, the amateur service may have its greatest future down in HF because that is all we mayl be allowed to keep. And there will be enough hams, and the CW filter will likely be needed more than ever.

would you like to take a guess how these CBs get peaked? From personal
experience, I saw 2 different hams WORK on a CB for a few bucks. Now,
before you all junp down my throat, I'm not blaming the mess on cb on
rebel hams, all I'm saying is that in most cases, average people don't
have the knowledge to peak a radio. Besides, do you think the Smiths
down the street are going to bother with more power? All those guys(and
gals) will most likely stay on CB. This will help the everyday regular

guy have acces to some means of wireless, cheap, communications.

Well the guy that does it at this shop is not a ham. For another thing
what makes you think they want to stay within the 40 channels already
allocated. Just listen sometime on 27.555 (which is outside the cb
band) and you'll hear all kinds of junk there. Sorry but cber's are
looking for more spectrum just like us hams are.

The reason for the morse requirement, is to allow Hams to communicate.
If it is acting as a filter, to keep people from communicating, that
is reason enough to abolish the requirement. Just because a few,
selfish little hams, want the whole spectrum to themselves, does not
mean the law should support them. CW is an archaic form of
communication, that should have been abolished with the Marconi
system.

Well, that should fill my mailbox, so flame away. Doesn't change the
facts, though. CW will never die. Certain parts of the HF spectrum
should be reserved for the practice of this ancient art. However, it
is an art that has lived past its day.

Hmmm...Maybe we should have people demonstrate thier proficency at
horse shoeing before they can get thier drivers licence.... I should
be able to get a free lane, then...

Principles aren't of much account anyway, except at election time.
After that you hang them up to let them season.

Beats me if it is or not; I don't pay attention. Since your post indicates that you are not sure either, I think the point is made: most amateurs don't know and don't care when W1AW broadcasts. It is the duty of W1AW to listen to determine if a frequency is clear; it is **not** the duty of the individual ham to read QST or "Now You're Talking" and memorize W1AW's broadcast schedule.

I've tried to download the "SM404.EXE" form the web page "http://hawk.nmt.edu/bateman/sara/readme.sm.html". I've used the "click here" method supplied on the page and used the "save file as" method available to me with Netscape and Win95.

When I "click here", I get a page full of text almost immediately that looks like some kind of UUencoded page but I can't do anything with it.

When I use the "save file as" method, I get a file downloaded but it won't unzip or decompress.

Do you have any ideas??

thanks,

In what way do you deal with legal regulatory issues?

> Amateurs only
> use small parts of the 2m band and only a small fraction of the 440MHz
> band.

How so? In the Chicago area, there are no unassigned repeater pairs, the
simplex frequencies are well occupied, the weak signal portion of the band
is only 300 kHz wide and reasonably well used when conditions are good,
and the satellite portions are occupied by non-frequency agile satellites.
So where is the non-small parts of the 2 meter band that we *aren't* using?
The same is true for 70 cm. Some of it may appear lightly used as it is
used by very wide bandwidth modes such as ATV (2 channels at 4-6 MHz
each.) Again, there are no unassigned repeater pairs, and the simplex
frequencies are reasonably busy. So which most part of 70 cm aren't
we using?

> Meanwhile, 'society' is demonstrating a real commercial need for

> which we are headed.

Only if the non-ham independent observer has the same skewed data
that you appear to have, and even then if they believe the story that
these other need these resources. I find it hard to believe that commercial
interests are really after spectrum in the VHF/UHF bands. The background

and sky noise on those bands stink, antennas are larger, etc. About the only real advantage I can see is building and foliage penetration. So why *are* these folks interested in VHF or low UHF allocations and not microwave allocations? Or this a diversion tactic on their part? Heck, the amateurs are trying to move amateurs off of the VHF and low UHF bands for satellite work because of the noise. It's only because of the investment in equipment that we'll have mode B on Phase 3D.

> The onslaught of e-mail to the WG will appear to

Please explain how less than 2 MHz of spectrum that is subject to world wide propogation and hence potentially poor sharing is going to fulfill the taking of 34 MHz of VHF/UHF allocations? Or have you come up with some new way of putting an ATV signal onto 10 meters?

> And there will be enough hams, and the CW filter will likely be

4580. RFI to AM on 1994 Ford Taurus

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-29 00:00:00 UTC
From: axinar@one.net
Message-ID: <4r3g94$qa2@news.one.net>
Source record: 221984
Cross-posted to: rec.radio.amateur.misc,rec.autos.driving,rec.autos.tech

I posted this to the amateur radio packet network and I was told that Ford knows the fix for this ... I was wondering if anyone else has noticed this and has any details ...

I just started to notice after driving my 1994 Ford Taurus for a while that any time that I go under bridges or anything of the sort that there is a really loud whine on the AM band.

Something started to tell me part of it was engine and part of it was A/C fan, so I tuned the radio to a frequency where there was no station and I started moving the A/C fan to different settings and turning the car off and on.

Sure enough most of the noise was coming from the A/C fan.

The fellow on packet says there is a fix for this.

Any ideas?

Thanks!

I was getting poised to respond to the points you made and then I came across this. It appears that one of your debating techniques is to call into question the purpose for which a poster is making his points and thereby attempt to discredit his content on non-technical grounds. Those who post positions that are not in agreement with your's are suspected of posting "flame bait". That of course additionally reflects on the poster as a 'troublemaker" or even someone who for some wierd reason actually enjoys getting flamed. Of course, it is not likely that there are others who would post for the simple purpose of stating a position or even 'speculation' that is in any way contrary to yours. Actually I was stating a very common position regarding CW and speculating as to the probable future of ham radio with respect to the increasingly valuable VHF/UHF frequencies. If the worst ever did happen, and we did lose 2m and had to live with 10m, yes I think 10m could replace the present utility of 2m in MOST georgraphic regions in the country. Certainly New York, Chicago, San Fransisco etc. might have to live with fewer repeaters but the ability to communicate in the same manner, albiet at a somewhat reduced level, would still be there. In fact, 10m FM duplex is common in many areas as you well know. Are things getting so bad that speculation, for discussion's sake, (and speculation wrt the 2m/70cm band threat is very appropriate in this ng), is considered flame baiting?

As a fellow Ham, and a unit manager for a national chain (NOT RS), here's
mho:

Radio Shack, like any other retail outlet, has to SELL merchandise to keep
operating.

It only stands to reason that their personnel would, on average, know
little about electronics. Here's why...

Anyone ever walked into their LOCAL (as in ONE outlet) electronics shop,
or ever visited an HRO? If you've talked with any of these people, you
were probably more impressed with their knowledge of their craft than that
of most RS employees, right? Ok, now why do you suppose that is? Let's say
you were going to open your own business. What would it be based on?
Perhaps something that you KNOW something about? At a minimum, you're
going to have to learn something about it if you plan to be successful.
Naturally, therefore, if someone comes into your business and asks you
questions, you'll be close to a know-it-all. This is why your local 1-5
outlet parts shop knows what they're talking about. This is why HRO people
are all hams, and know what they're talking about.

Now, let's say you do well, and form a corporation. Your company "goes public", sells stock, forms a board of directors, etc. Oh, and let's say you grow your chain of shops to oh, let's see... 6000 or so! Now, might your priorities change a little? First of all, you're going to need some employees to staff these 6000 units... approximately 25,000 or so (the corporate support staff doesn't count here). Now, with this many units scattered across the country, you're going to find that getting "gurus" on your field becomes a bit more difficult than it did when you needed only 4-5.

You'll also find that, hmm... since a large portion of your capital comes from your investors (shareholders), you'll need to make them happy. This means, you better make big profits. Well, there are a few ways to do this... EXPOSURE (i.e. advertising, more outlets, etc.), CONTROLLING EXPENSES (i.e. controlling payroll, being any businesses' largest expense), and INCREASING INCOME (i.e. sales). Well... is a pattern forming here? Aside from the advertising, controlling expenses means paying as little as you can get away with, and having those people you employ sell, sell, sell.

Now, here's more to consider... since we're dealing with RS: If you're an electronics guru, and really know your stuff, how likely is it that you'll work for minimum wage plus a small commission? Since you know electronics well, that's more likely your talent, not sales -- which requires a more gregarious personality to be successful than most "gadget-geeks" possess. Next, since another part of your success depends on sales, would you rather hire poeple who know their trade, or people who can sell? Sure, you'd rather have both. But, for any of you who've ever spent any time in sales training, you know that most purchases are emotionally motivated rather than logically so. Fill-up your average customer's head with facts, and they'll walk away, EMPTY HANDED, more confused than they were. Appeal to your customer, be friendly, helpful, show you know the major features of what you're selling, and you'll send away a happy CUSTOMER. It may be sad, but true. Those of us who buy on logic and intimate knowledge of what we're seeking make up a vast MINORITY.

Where does all this lead? Simple: RS, when possible, at least tries to get people who have a broad, general knowledge of electronic equipment. but, in the end, SALES are what count. That's the way it is for any retail chain, and the bigger the chain, the more it's going to be that way. So, don't blame Radio Shack. They do the best they can under the rules of the game.

I agree that you should learn the letter codes at the speed at which you will be tested. The ARRL uses 18 WPM for the 13 WPM test, and 20 WPM for the 20 WPM test (naturally). If you'll be testing with an ARRL affiliated group, I'd suggest learning at the 20 WPM speed from the start, the 18 WPM characters won't sound that different if you decide to take the 13 WPM test, and you'll be primed for your main goal of 20 WPM.

But if you test with a different VEC, they may use actual Morse Code rather than Farnsworth Code, IE 5 WPM is really 5 WPM, 13 WPM is really 13 WPM, etc. That sounds *really* different than the spaced 18 WPM letters of the Farnsworth Code used by the ARRL VEC. (Morse is a timing code and so's Farnsworth, but the timings are *different* so they are different codes.) Check with the local testing crew, *before* you start, to find out if they test using Morse Code or Farnsworth Code. Then learn what they test.

(The object of the exercise is to pass the test, whether you actually learn Morse Code or not is irrelevant. IMHO, if we must have Morse Code testing we should actually use Morse Code, but the ARRL disagrees.)

What I really wanted to comment on, however, was the remark about the brain being the fastest, most powerful computer available. In the current _Science News_ is an interesting article which bears

on that subject. It gives baud for auditory sensory neurons of 100-250, and for interneuron communications of 10-60 baud, both depending on the magnitude of the stimulus.

Even the lowly Basic Stamp can keep up with those rates. The encoding seems pretty efficient, however, with 3 bits encoded per baud. Still, this isn't the description of a *fast* computer. In fact, the brain isn't a fast enough computer to command your arm muscles to remove your hand from a hot stove before it is burned (something easily achievable with a silicon computerized robot). That has to be left to a low level reflex mediated closer to the source and sink of the signals (in the spinal cord), in order to get around the interneuron communications delay.

It is this pre-processing, and the massively parallel nature of the nervous system, which give the brain its apparent power, when in fact the brain is not doing most of the detail work. The neural net that is you is a very complex associative pattern matching stimulus-response system, but it is a slow system. Which is why we can't hear very high frequencies (the sensory neurons aren't fast enough), and why we can be fooled into believing 24 still pictures a second represent smooth continous motion (too many interneuron delays to give realtime results to the brain).

The purpose of drill is to "burn in" patterns for this stimulus-response system to recognize, IE build reflex patterns by lowering certain interneuron potential barriers through repetitive firing. The conscious mind is far too slow to do realtime pattern matching, it has to occur on the reflex level where the interneuron pathways are short enough to give realtime results. The key to learning Morse Code is *don't think*, just do. What you're trying to achieve is a mindless reflex response to a limited set of sound patterns.

A good way to do this is to reflex type. When the ear hears didah, the finger should strike the 'A' key. There should be no conscious involvement at all. You should even be able to be thinking about something else entirely while your ears and fingers do the work. This was the same way you were drilled to become a touch typist. You don't think about what your fingers are doing, when the letter is called, your fingers just do it. (You can read the paper later to see what was copied. Remember, it isn't copy until it is on the paper.)

>
etc.

The U.S. National Telecommunications and Information Adminstration, in their recent spectrum requirements report, states that worldwide Amateur radio growth is 7% per year. So Amateur radio is growing, not declining. I would agree though that *relative* to other radio communications services, primarily "cellular" radio telephone and its rapid growth, a 7% growth rate is a slow growth rate.

This is NOT true. Bill Gates and Craig McCaw were founding investors in a company called Teledesic. Teledesic is getting allocations at 28 GHZ for high speed satellite data access (digital voice, video, internet data, whatever - its all bits). They have no involvement that I am aware of in LOW earth orbit (LEO) satellites for 2-way short messaging of the type that the LEO providers wish to offer.

I am an employee of Microsoft Corporation and the above statements represent my personal opinion and are not necessarily those of my employer. Besides who else would ever accept credit for my silly opinions?

>"Radio Relay is history, as is any organization built around it"

Interesting questions but we should accurately note that 100% of all Amateur Radio allocations in the U.S. from 420 MHz and up are shared allocations with numerous other radio services, including unlicensed devices, ISM, vehicle location services, radar, doppler wind shear detection radar and more.

Hams have 50-54, 144-148 and 222-223 as exclusve use in the VHF and UHF spectrum or a total of 11 MHz of spectrum. All the remainder is shared. So the original thesis that hams have exclusive use of huge chunks of spectrum is unfounded. A better term is we have "access" to several chunks of spectrum and must share with other users. I have shared with USAF radar, doppler wind shear radar, microwave ovens and others.

Amateurs existing and proven ability to share with other users offers tremendous opportunity to continue having access to many of these bands.

Not with standing these comments, I am strong proponent that Amateurs need to understand the new spectrum realities. So far, I don't think they have.

>to keep up with ship to ship missles, aircraft and subs. However
>there are Morse Code operations in dealing with ship to ship routine
>operations (flashing lights), Special Operations groups (SEALS, SF, etc)
>and Morse intercept (third world military ops).

Well stated but I doubt that this post will garner many converts to
your no-code position. You indicate that the armed forces have
migrated to faster modes but you also indicate some important areas
where it was *not* dropped and which many people, myself included,
may not have been aware of, ie, SEALS, flashing lights and third
world. I imagine that there is a reason that many 3rd world military
must use morse; they can't afford the more expensive digital toys.
Amateur operators in those countries are no richer than their
militaries. In spite of the many arguments that can be manufactured on
this subject, equipment that operates with Morse can consructed very
cheaply, and yes, 8086 based computers *are* expensive and not always
easily available in some parts of the world. That alone makes digital
expensive. Thus your above paragraph, although it lends credence to
dropping Morse because of technological advances, also reinforces the
fact that it has not gone away (one of your points, I think) and
provides a good reason for keeping it (less wealthy 3rd world
amateurs). Even if the US FCC were sympathtic to your no-code points,
some members of the ITU from outside the US might not be.

> We must realize that the world moves very fast nowdays. High speed
>digital is necessary for that communication. I think that many of us
>have romanticized code, that of being the lonely operator that saves the
>day.

This is just an opinion which I do not happen to think accurately
reflects the motives of the pro-code people. You may wish to give us
more credit than that, but then again, you may not.

> Those visions are of the past, WWI and WWII. The world is different now. It moves faster.
> Code was of a slower age.

"Voice" is not that much further ahead. Anybody know what year the
first AM voice transmission attempt was successfully completed? I can
state that voice was of a slower age as well, yet there is no current

movement to drop voice. We need to be careful when speaking in generalities. It can be very easy to dispute them simply be selecting different examples.

> CW and code still have a place. It is fun to do. It has its challenges. But it is not necessary as a testing element. Knowledge of
>technology is.

This statement may give you a few converts, but

>Knowledge of the law, rules and regulations are even
>more important.

This statement will not.

>This what must be tested. Very dry and dusty -- not
>very romantic.

I think you are proposing a tougher written exam (please correct if I am wrong). If so, would you propose to first toughen the written exam and then drop code, or would we drop code first and then conveniently forget to toughen the written exam, as we did with no code tech.

I am working on getting a very low cost solution to get a car radio or some other cheap device to send me its vin number and license code when I need it. Anyone got any ideas. I am working with 32 impound lots with over 230,000 vehicles and need to identify certain units when the occasion arises for police impound and insurance purposes.

I need to use either 12 volts existing or package seperate battery and transmitter for a seven day signal capability.

Any help would be appreciated.

their GMRS radios.
Rmember, many RS salespersons are clueless and know very little of their
products. Tandy would never make a product that exceeded FCC regs....
hell their Cb radios come out of the factory _way_ undertuned.

In fact the Tech written exam was -relaxed- four years prior to the
introduction of no-code, by removing the 3B element. Two test elements
dropped in four years. So much for "drop code, toughen the written."

In article <4qfkmt$ddk@news3.realtime.net>, <cfb@bga.com> wrote:
> There seem to be two sub-threads running through this whole thing,
> namely one questioning the need to mandate Morse and one wanting
> to make Morse obselete.

Almost a cogent analysis: most of the supporters seem to fear that
cries of "obsolete" with regard to de-mandating Morse will lead
quickly to forbidding Morse.

We are allowed in this world to have things that are neither mandatory
nor forbidden. If Morse code has such great advantages as claimed, it
will not die out if no longer mandated. If it does die out, the claims
were overstated.

Make it obsolete? It is obsolescent everywhere outside our bands, with
the possible exception of ELF, and I think even they are mostly
robo-digital. It is already obsolescent in spite of still being mandated.
We don't need to MAKE it obsolete. Time alone takes care of that.

Damped Wave (DW) emissions are forbidden, for good reason.
There is no pressing technical reason to forbid CW emissions with the
Morse encoding of On-Off-Keyed modulation. (Although there are technical
reason to forbid AM emissions, due to their atrocious bandwidths and
heterodynes, even that will not happen.)

Why should I be required to pass a code test to operate HF Phone on 75m
for reaching beyond my local VHF area within the state but not to
operate CW on either 6m DX or the VHF-uplink to an OSCAR with a 10m
downlink and potentially international coverage (especially once Phase
3-D is up there)? The relevance escapes me. I say it's an absurd
anachronism that gives our Service a public relations black-eye.
(The looks I get when technically adept people hear the repeater i.d.
in Morse! Anti-deluvian!)

> While I am as much against government interference as the next guy,
> I have a hard time objecting to the requirement to learn something
> that is easy ...

Easy for whom? Certainly it is easy for anyone who has done it. There
are people who have tried and tried hard and CAN NOT LEARN MORSE.

In the old days, they just let their Novice ticket expire when they
couldn't break the 10wpm barrier. Now you can meet a few on the VHF
repeaters, since there is something else to do in the A.R.S.

(Amateur Radio Service).

In the days when CW was king and AM-phone was unreliable and SSB was
a novelty, it made sense to just ban these people from the A.R.S.
Now-a-days, it's not really advisable to strap a key to your knee when
mobile, although I have heard of a few 55wpm/55mph QSOs recently.
If someone has something to add to the A.R.S. inspite of being unable to
learn Morse code, should they still be banned from the A.R.S. in the current
state of technology? I say not.

Are there people who CAN NOT LEARN the code? Yes. Case it point:

My father flunked morse code class in the Army -- working on it and radio
intercept operations training full time for several weeks -- TWICE
(maybe three times, as a teacher he accepts that his "pass" the third
time was an early example of "social promotion"), knowing that if
he didn't get the rating he'd be carrying a rifle to Korea (where they
had a shooting war going on). That's motivation, he's bright, has a
good ear (for music), but he didn't make it. After being "graduated"
while still incompetent, he was assigned rotations at an army listening
post in a nice safe location, where supposedly copied morse on a mill,
but in reality did all the scut work (broom-and-coffee chores) for his
watch while the other guys did the mill-work. Lucky for him it was a
large station... if they hadn't had 8 hours of scut-work, the C.O. would
have had no choice but to send him to Korea.

> and has been useful in the past

True, but irrelevant. Damped Wave Morse-code (that which CW is in contrast
to) was once useful and is now unlawful as well as obsolete. Although
I don't propose outlawing CW/OOK/Morse, I find it's former usefulness
irrelevant.

> Again, I must point out, it takes more
> time for me to respond to these posts than it does to do a Morse drill.

True, but the debate is much more useful. We might actually save
our A.R.S. If the Little LEO consultants were to play up that the
Core Membership of the ARRL thinks that HF Morse Code is current
technology, they could win in the court of public opinion. And to
win against the Little LEOs, the ARRL needs the voices of support of
the Scummy-No-Code-Techs they've been ignoring. Luckily the threat
comes to the bands most used by these undesirable, so they're
interested. But after this tempest in a teapot dies down, the ARRL
will need to keep these newly politicized hams happy...

> - As Gary has mentioned already, digital modes come and go (re RTTY).
> What is today's hottest mode may be tomorrow's obsolete trash.
> Morse, on the other hand, is everywhere on HF and has been there
> for a long time.

Should we all be operating AM instead of upgrading to SSB because
of the sunk investment cost?

Are you saying RTTY is more obsolete than the straight key and
ear-copied morse code? With a straight face?

Since so-called CW (OOK modulation, /Morse encoding) does less harm
than say 6m-AM, we need not ban it. But the fact that every ham
currently active on HF knew it once and probably is still equipped
physically for it is irrelevant for whether we should mandate continued
testing and training.

> Thus, there is quite a world wide investment in the
> necessary equipment.

This contradicts it being a cheap mode ...

> - If a digital mode is not an option (ie, the other guy can do only
> phone or Morse), Morse cuts through more easily than phone.

CW gets through better than SSB gets through better than AM.
So what? If he can't or won't do modern digital and I can't or won't
do original digital, either we'll talk later when we can get through
on SSB or someone else will work him.

> - Being able to read and write a foreign language is one thing, being
> able to speak it is another thing entirely

True. However, CW is not the only mode besides SSB, contrary to the Old
Buzzards.

There's no reason (aside from the silly ARRL recommendation) not to use
the same prosigns used in international morse QSOs on international
RTTY/AMTOR/etc modern-digital QSOs. They work. They'll work for any mode
except SSB.

> If you're not interested in talking to foreigners, then why do you need
> HF, when you can use repeaters and Oscars and TNC's and PC's for
> all the local and national coverage?

HF voice, CW, and data are useful for inter-region intra-national comms,
particularly for emergencies and emergency drills (like Field Day).
And to be ready for emergency, we need to practice. (I hate to think
of this as an excuse for the misogynist lid nets on 75m... :-)

This is usually where people say CW has the emergency advantage over
modern digital that they don't need a computer that runs of the AC
mains to send and copy CW/Morse/OOK. How many people really need
AC mains to run their computers anymore either? Our Field Day site ran
all its computers (mostly running CT) off the emergency power generator
like they would in a sustained emergency, and in the HF tent, most were
laptops capable of running on battery longer than the transmitter would
have. My pocket "calculator" has an RS232 port; if I wanted to, I
could add a pocket-TNC to my backpack and be survivable digital portable.
The days of RTTY being non-survivable are OVER.

(And besides, with all the robotic keyers out there, the ARRL has instituted
Straight Key night. I wonder how many CW stations are actually survivable

in normal operating mode...)

(The argument that "All HF hams should have a mode in common" made sense when there were fewer hams. I suppose we all should recognize ... --- ... even if we can't copy code, just as we all should recognize Mayday! even if we can't speak French, so that we can at least clear the channel or maybe try to raise a relay station if we can't help directly. But if we're worried about Band Crowding if all us Scummy No Coders get onto the HF bands, I don't think one can also argue that What if The No Coder is the only one listening when The Call comes? if s/he's the only one listening, then it's not too crowded.)

> In my book, there is another advantage to CW. It is:
> - For the home brewer, tackling a CW TX is a much simpler entry point.
> If Morse were to disappear, how many adults (let alone kids) would

As Gary has repeatedly has said, one more component and it's FSK (at least on the transmit side; how about RX, Gary?). And the desirable interface circuit will be no more complex than the Curtis Keyer you'll quickly add to the CW version of the project. I can imagine building a dual-mode FSK/CW TX with RS232 and Curtis-Keyer interfaces, and don't see the point in NOT doing so if I do scratch-build anything...
I've also heard WBFM is easy enough, why bother with FSK.

Who says anything about MORSE disappearing? CW/Morse is no where near as harmful as DW/Morse was, we don't need to ban it. A CW TX is a nice project. I may build one. I may even build it on a band where Morse tests aren't required. As a Tech- licensee, I'm licensed to build and operate CW TX's on 6m and 10G and every ham band in between, with no code test required. So why do I need a test for 10m? Because the IARU requires to FCC to require it.

4611. 10 meter meteor scatter

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-30 00:00:00 UTC
From: YPAK35A@prodigy.com
Message-ID: <4r73hv$501g@usenetz1.news.prodigy.com>
Source record: 221865

I have been off the vhf/uhf bands for a year now due to moving BUT I have
been monitoring meteor scatter on 10 meters ! I am now ready to set up
meteor scatter skeds for 10 meters. I have a good array, preamps and am
ready to run skeds, so if you need Ms. for your was, want to experiment
or want to jut try a sked on 10, PLEASE e-mail me. The potential of ms
on this band is not fully realized and there are going to be a few more
years before we get good propagation on 10. Give ms a try. E-mail me
for a sked or info. I should have the antenna up this week (I hope).
i am waiting on it to arrive. The tower, rotor etc. are in place and
ready ! All e-mail wll be answered. - Larry, WB5KYK, Laurel, Ms.

4612. Wanted, someone to do a mod on an HT, in the SF Bay Area

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-30 00:00:00 UTC
From: faunt@netcom22.netcom.com
Message-ID: <FAUNT.96Jun30153226@netcom22.netcom.com>
Source record: 221866

I'd like reccomendations for someone to mod an ICOM HT for me.
My eyes aren't really good enough, neither is my coordination, and I
don't have appropriate test equipment to make the necessary
adjustments, and measure the characteristics of the unit both before
and after the mod. I do know what needs to be done, and will supply
all parts.

Before someone starts flaming, I want to modify an US-configured HT
for European operation.

SB DX @ WW $OPDX.260
Ohio/Penn DX Bulletin No. 260

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 260
BID: $OPDX.260
July 1, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, ARRL DX Bulletin, AD1C, AA2SZ, W4/YV5DTA, KQ4GC, N4AA & QRZ DX, K5RH, N5OGP, WA6BXH, AA7VB, AA8U, KD8JN, CT1EED, DF4RD, DL7VOA, DL9GOA & DX News Letter, EY8MM, F6AJA, G4BUE & DX News Sheet, PS7AB and ZS1CM for the following DX information.

3D2, ROTUMA ISLAND. The ARRL DX Bulletin reports that Antoine, 3D2AG, is planning a one month DXpedition for around August of this year. The call will be 3D2AG/P and his activity will be on CW/RTTY 80-10 meters. QSL direct to his CBA.

5R8, NOSY BE ISLAND (MADAGASCAR). Gerard F2JD/5R8EN will be active from this coastal island (IOTA AF-57) starting next Thursday, July 4th, for 3 or 4 days. He will be there on business not a DXpedition, but he will take a transceiver with him. Gerard will operate during his free time on SSB and CW. He will also be using 5R8EN/P as the callsign. QSL via F6AJA.

5W, WESTERN SAMOA. The DXNS reports Perry, WH6XY, will be active for a year as 5W1PC. He has been heard on 14226 kHz between 0130 and 0300z.

ATTENTION (IOTA, Grid Square, and County Hunters)! Randall, KD6JN will be on Hatteras Island (NA-067, Grid FM-25, Dare County), from July 13-20th. He will be signing KD8JN/4 de NA-067 primarily on SSB, with CW on request. Randall will be operating all bands, including WARC, except 160 meters. A special QSL will be available direct or via the bureau. Send an SASE (US), or an SAE and 1 IRC (DX) to KD8JN, Randall L. Phelps, 1226 Delverne Ave SW, Canton, OH 44710-1306 U.S.A.

A4, OMAN. Chris, G3VUO, is currently on Masirah Island (AS-014) and has just obtained the callsign of A45XL. He will be active very soon. This Omani island is located in the Arabian Sea Coast North Group.

BOGUS ANNOUNCEMENT!!!!!
BHUTAN (A5). Frank, ZS1CM, talked to his good friend Barry, ZS1FJ, recently in regards to the A5 announcements (reported in OPDX.259 and other DX publications). Frank tells OPDX, "To give him (Barry) half a chance and he will combine business and his great passion for DX... Regretfully, A5 does not appear in his itinary at this moment."

MALPELO ISLAND (HK0). Ross, K5RH, has recently talked to Bert, HK5JPS, and he verified that the announcement (reported in OPDX.259 and other DX publications) of a planned February operation is not true. Bert also stated he never said in Dayton that the HKs were planning such a DXpedition. Bert can be found on 14165 khz almost daily around 1200z and he would probably have something to say if the Bogata club has such plans in the future.

CENTRAL ASIA MAIL. Nodir, EY8MM, reports some DXers in Central Asia are having some difficulties with the local postal system in their countries and would like to make some suggestions in QSLing to these areas:
1. Do not send Hard curency. (Even if you think it easier for you and better for DX. Post officers will still find it and discard the opened envelope.)
2. Send 2 IRC which will cover all postage.
3. FYI air mail tarriffs:
EX-land 11.30 soms 90 cents
EY-land 210 Rubles 72 cents
UN-land 47 tenge 72 cents
4. Use a label for both addresses (return/receiver).
5. If you don't need a QSL urgently use the bureau service.

CQ, INSUA ISLAND (Portugal). The following team will activate IOTA EU-150 from July 26-29th: CT1ZW, CT1BQH, CT1BWW, CT1CJJ, CT1DVV, CT1EEB, CT1ENQ, CT1ESV, CT1ETZ and CT1FMX. This 4 day operation, which includes activity in the IOTA Contest, will be on all bands on SSB/CW, but no RTTY on this trip. Outside the IOTA Contest they will have 3 stations running simultaneously. There will be two stations with triband beams and a third one with verticals, running KW power (with generators permitting). They have requested the callsign CQ2I. Operators will also be active using their own call/portable. The station location will be operating from a 25th Century old Portuguese Fort. The Island is good for the following awards: IOTA EU-150 (Islands On The Air Award), DIP MI-001 (Portuguese Islands Award), DFP FMI-Unknown at the moment (Lighthouses Award) and DCFP F-006 (Portuguese Castles Award). QSL Manager is WA1ECA (European stations can also QSL via CT1EEB). QSLs direct or via the bureau.

FT5, CROZET. Samuel, FT5WE, reported that he will be a participant in the upcoming IOTA Contest. He plans to be active as a Multi/Op entry, and he will probably be using the callsign of compatriot, FT5WF.

GU6, ISLE OF SARK. Operators G3KHZ, G3SJJ and G3TMA (IOTA Contest Co-ordinator) will be active as GU6D from this Guernsey Island group (EU-114) during this year's IOTA Contest (July 27-28th). Sark is a small island where motor cars are prohibited. Transportation on the island is by bicycle; horse and cart. QSL via G3SJJ.

KG4, GUANTANAMO BAY. Bill, KQ4GC, will be going here July 12-18th. He will operate on all bands, RTTY and SSB. His callsign will be KG4GC. QSL to home call (KQ4GC) with SASE please.

KH0, MARIANAS ISLANDS. JA6CNL and JA6IP will be active from Saipan, July 14-17th, as KH0N and KH0/JA6IP, respectively. Activity will be on 80-10 meters, including the WARC bands and 6 meters. Operations will be on CW/SSB and with plans to participate in the All Asian DX CW Contest. QSL via homecall or via NKDXC, Box 805, Yahata, 805, Japan.

MORE DX WEB SITES TO CHECK OUT.....
South Florida DX Association: http://www.bridge.net/~yv5dta/sfdxa.htm
QSL information and more: http://www.coredcs.com/~mtw
"DX Library" page on the YCCC Web site: http://www.yccc.org/

NEW ADDRESSES/QSL INFO CORRECTIONS....
Frank, DL5PV, recently operated HI7/DL5PV and gave his home call as the QSL route. His address in the callbook is incorrect. Please send all QSL requests to: Frank Eichstaedt, DL5PV, Mussbacher STR. 7, D-67067 Ludwigshafen, Germany.

Nick UN7JX is requesting all QSLs for UN7JX go NOT to via N2AU, but UN7JX via CBA.
NEWS ON KH1, KH3, KH4, AND KH5. The following was from WASHINGTON (AP): U.S. Senator Daniel Akaka wants the federal government to give the state of Hawaii jurisdiction over seven U.S. possessions in the Pacific region.
Akaka's "Insular Areas Consolidation Act of 1996" would transfer jurisdiction over Baker Island (KH1), Jarvis Island (KH5), Howland Island (KH1), Johnston Atoll (KH3), Kingman Reef (KH5K), Midway Island (KH4), and Palmyra Atoll (KH5) to Hawaii (KH6).
The bill was prompted by the revelation that the new owners of Palmyra Atoll - KVR Inc. of New York - want to create a nuclear waste storage facility there. The Hawaii congressional delegation and state officials oppose the proposal. "My legislation will give the state of Hawaii a stronger voice in the fate of U.S. possessions in the Pacific that currently are not part of any state or territory," Akaka said. Similar legislation was introduced in the House last year.

OOPS DEPARTMENT. QSL information in last week's bulletin (OPDX.259) under OY, FAROE ISLAND should have read: Greg Rybczynski, Hagmarksv. 18, 448 33 Floda, Sweden (not Poland as reported).
PACIFIC DXPEDITION. Just a reminder, that the 8-land group (KB8ECG, KG8CO, KG8DS, K8AQM and N8CC) begins their Pacific trip today. Here is the latest Date/Callsign: July 1-4, Majuro - V73TR, V73JB; July 5-7, Pohnpei - V63CK, V63CF; July 7-9, Truk - V63CK, V63CF; July 10-12, Palau - KC6JJ, KC6BP; July 13-17, Osaka - 7J3YAD (Konsai International Radio Club); July 17-19, Maui - KH6/K8AQM, KH6/KG8CO, NH6/N8CC; July 20-24, Ofu - KH8/KB8ECG, KH8/KG8DS, KH8/KG8CO, KH8/K8AQM, NH8/N8CC; July 24-29, Apia - 5W0BS, 5W0DG, 5W0KI, 5W0TR, 5W0JB. QSL all calls via AA8HZ. Activity on RTTY will take place July 17-29th.

PALESTINE OPERATION WRAP-UP. From a portion of a press release from Ray, G3NOM, and JA1UT, Yoshi states: "An operation took place from the Gaza Strip, Palestine from 14th - 22nd June, 1996. The operators were JA1UT, JA1UPA, JA8CDG, JA8RUZ/KH2Y, and G3NOM. Callsigns used were JA1UT/ZC6 etc. Approximately 6000 QSOs were made mainly on 7,14, and 21 MHz, CW/SSB and RTTY.
The operation was linked with a United Nations aid project, to improve communications between certain hospitals and ambulances in the Gaza area, and to establish communications at the newly constructed Palestine International Airport. Therefore, amateur radio operating was a secondary activity.
It may be of interest to note, from the DXCC point of view, that amongst other things, the Palestine Authority has a National Assembly, issues its own passports, and postage stamps, has its own police force, and judicial system, and importantly from the amateur radio view, the Ministry of Posts and Telecommunications is the authority that assigns, frequencies and licences for telecommunications services in Palestine. The regulations for the amateur radio service are already established. Three Palestine nationals have been licensed, and during this visit arrangements have been made to set up an amateur radio station in the MPT headquarters - ZC6MPT. Equipment and antennas have been donated by the JA1UT group. Details of the formal regulations for guest licences are presently being drafted, and several temporary licences have been issued to visitors." ADDED NOTE: OPDX InterNet Subscribers will receive the complete press release as an additional bulletin.

P4, ARUBA. Look for Bob this week signing P40I. He will be there from July 4-9th. Activity will be on all bands CW/SSB. QSL via CBA.
Dennis, AA7VB, will be here July 11-16th, primarily for the IARU Contest. Outside the contest, Dennis is willing to schedule contacts for anyone who needs a particular band or bands. Contact him via E-mail: aa7vb@aol.com. His callsign will be P40Z and he will be operating from Carl's, P49V, QTH which has plenty of antennas to assist him with this process.

PX7, BRAZIL. Special event station PX7AB will be active July 1-7th, to commemorate Brazil's "Annual Fire Prevention Week". Operations will be only on 20 and 40 meters SSB. Check the usual DX frequencies and the Brazil DX Net (Sat/Sun, 14222 kHz at 1900z). QSL via PS7AB, Ronaldo Reis, PO Box 2021, Natal/RN, 59094-970, Brazil.

ZC4, UK SOVEREIGN BASE. PA0ERA and PA2HJS will be active from July 4-20th as ZC4EKJ with emphasis on 6 meters.

ZD8, ASCENSION ISLAND. Jim, N6TJ, will once again be active as ZD8Z bewteen July 9-17th. Operations will be on CW/SSB all bands, including the IARU HF Championship. QSL to VE3HO.

ZL8RI QSL (and ZL9 DXpedition) UPDATE. Ron, ZL2TT/ZL8RI, reports the QSLs for the ZL8RI DXpedition to Raoul Island in the Kermadecs have arrived in New Zealand from the Yaesu Company of Japan who have donated them to the DXpedition. The report is they look FABULOUS. QSLs are now being written out and their objective is to post all QSLs out on July 29, 1996. NO QSLS

will be sent out prior to that date.
The last meeting of the ZL8RI team will be held on July 7th to finalize any wrap up issues and the planning for the ZL9CI DXpedition slated for January/February 1999.

I need to pull in a UHF television signal that looks almost hopeless right now--and I'm wondering what I should do, beyond my plan to go get a UHF-only rooftop antenna, and maybe a little video amp device for it.

Can somebody make a suggestion about some smart techniques, or at least direct me to the group where I belong? (I can't find anything on video DXing). Thank you very much.

HAMFEST/COMPUTERFEST CALENDAR 1996 - NORTHERN ILLINOIS
last updated June 24, 1996 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (708)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale and ARRL for providing some of the information.

JUNE

June 2 (Sun), Princeton, IL - Starved Rock RC. Bureau County Fairgrounds. Admission $5, free parking. Info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341-1710, tel. 815-795-2201 Usually an excellent hamfest, with sellers from Illinois, Iowa, and Wisconsin.

June 9 (Sun), Granite City, IL - Egyptianfest '96, Egyptian Radio Club. Granite City campus of Belleville Area College, 1/2 mile south of I-270 on Ill Hy 203 at Maryville Road. 8:00am to 1:00pm CDT. Annual hamfest, computer fair and fleamarket. VE session, food and drink, indoor dealer / exhibitor area. Talk-in 146.79 MHz. Info: Egyptian Radio Club, P.O. box 562, Granite City, IL 62040, call Bill Dusenbery N9OQK at (618) 398-1456.

June 30 (Sun), Wheaton, IL - Six Meter Club of Chicago. DuPage County Fairgrounds. Outdoor and indoor flea markets. Gates open 7 AM. Buildings open 8 AM. Admission $5 at gate. Talk-in on 146.97 MHz (107.2 PL) or 146.52 MHz. No booze allowed. Tickets available from Mike Corbett, K9ENZ, 606 So. Fenton Ave, Romeoville IL 60446. 24 hour hotline for info (708) 442-4961. Good hamfest which moved from Santa Fe Speedway to Wheaton this year.

Jun 30 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

JULY

Jul 13 (Sat), Oak Creek, WI - S. Milwaukee ARC Swapfest. American Legion Post 434, Shepard Ave. Admission $5. Talk-in 146.52 MHz. Info (414)762-3235.

Jul 14 (Sun), Sugar Grove, IL - Fox River Radio League. Waubonsee Community College, Rt. 47 at Harter Rd. VEC test-

ing. Admission $5 at gate, free parking. Info: Diana WD9API, (708)293-7485. Fair, small to mid-sized hamfest.

Jul 27 (Sat), Pecatonic, IL - Rockford ARA Hamfest. Winnebago County Fairgrounds. VEC testing at 1st Baptist Church, 7th & Washington. Admission $5. Kids 10 and under free. Info, Marsha Plasters (815)399-9233 or Diana White (815)645-8545.

Jul 28 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

AUGUST

August 4 (Sunday) - Peotone, IL - Hamfesters Radio Club 62nd | annual Hamfest and Computer Festival. Will County Fair- | grounds, Peotone, IL I-57 Exit 327 East 6a.m. - 3 p.m. Air | conditioned main exhibition hall opens 8 a.m. Lots of | covered flea marked space, acres of free parking. Grand | prize $500, 2nd Prize $300, $100 for 3rd Advance double-stub | tickets $4.00, $5.00 at gate for more info e-mail Jim Riley | KB9CYL at rileytrix@aol.com

August 10 (Saturday) - Western Illinois ARC Swapfest, Quincy, IL. Eagles Alps Grounds 3737 North 5 th Street. 4.5 miles north of downtown Quincy with easy access from US Highway 24. 8:00 a.m. to 2:00 p.m. Admission is $3.00 at the gate, $2.50 in advance, per person. ARRL VEC testing, all classes, is at 12:30 p.m. Reservations go to NA9Q at (217)224-8526. Indoor flea market is $5.00 per 5-ft table. Outdoor tailgating space is free. Talk-in is on 147.03. Lunch will be served on the grounds.

August 18 (Sun) - DuPage ARC, Stickney, IL. DuPage ARC Hamfest Computer Show. Hawthorne Race Course, 3500 S. Cicero Ave. Air conditioned exhibit hall for dealers. Outdoor fleamarket spaces free. 8AM - 2PM. 6 AM setup. Admission $5. Kids under 12 free. Talk in 145.25 MHz. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517. tel: 708-985-9256.

August 25 (Sun), Woodstock, IL - Tri-County Radio Group. McHenry County Fairgrounds, Rt. 47. Admission $5 at gate, free parking. Kids under 12 free. Info (voice/fax) (708)658-1678.

August 25 (Sun) - Vermilion County ARA, Danville, IL. Info: Gary Denison, KA9SKS, 14704 East 2750 North Rd., Danville, IL 61834-5610. tel: 217-759-7389.

August 28 - 30 - Antique Radio Club of Illinois, Elgin, IL. RadioFest96. Holiday Inn Holidome and Convention Center, 345 River Road, Elgin, IL 60123 Ph. (708)695-5000,

(847)695-5000 After 01/20/96. Info: Jeff Aulik, 1708 Parkview Ave., Rockford, IL 61107 or Carolyn Knipfel, RR 3, 200 Langhorn, Morton, IL 61550.

SEPTEMBER

September 8 (Sun) - Bolingbrook ARS, Joliet, IL. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517, tel: 708-759-7005

September 13-15 (Fri, Sat, Sun) - Peoria, IL. ARRL National Convention. Info: Ron Morgan, KB9NW, PO Box 3508, Peoria, IL 61612-3508, tel: 309-694-2649

Sep 21 & 22 (Sat & Sun), Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. Starts 6 AM. Buildings open 8 AM. VEC testing. Info, (708)457-0966. Usually one of the best hamfests in NE IL.

Sep 29 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

NOTES - Computer Central shows

Computer Central computer shows are held at the College of DuPAGE, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

I kinda agree with you. It is too bad that Hams in today's age
can't build a thing for themselves. True, there are a lot who do
build, but the majority find it easier to write a check than put any
effort into their equipment (building, testing, improving). Lack of
knowledge and laziness has killed some of Ham Radio. Where has
Heathkit gone? And why have they gone away?
I enjoy QRP a whole lot! There are a lot of opportunities to build
in QRP. I built a 40 meter transceiver that fits in one of those
metal Altoids box - with its 9 volt battery. It puts out 250 mW (More
than enough needed to have a QSO). I made my first contact after 2
tries on it right away.
That was a thrill...to actually have a QSO with something I built
from scratch a couple days earlier. THAT is what it is all about, and
THAT is Amateur Radio at its best.
Unfortunately that thrill is not felt by many people any more
because there is no desire to build. There is no desire to put any
effort into their station except for just unpacking it, plugging it in
and calling CQ.
I wish Heathkit was still in business. I wish more people built
instead of signed checks. Someday it might all change again...

Allright! Having seen this quote too many times the last week,
I'll toss my 2 cents in:

>>In a June 10 open letter to the Amateur Radio community, Kenwood's
>>Amateur Radio Products Group National Sales Manager Paul Middleton,
>>KD6NUH, painted a dismal picture. "When we looked at where Amateur Radio
>>is today, and where it is going to be in ten years at the present rate
>>of decline, the future looks bleak," he wrote, citing competition from
>>unlicensed communications modes. (internet).

Not! Amateur Radio specifically has to do with the 'science' of
communications and experimentation with RADIO.

RADIO, by definition, is an integral part of Amateur RADIO.

It is a fallacy to assume that those who communicate via Internet
might have otherwise become Amateur RADIO Operators.

Mr. Middleton is merely the most recent example of individuals
who over the last fifty years or so have pointed at a similar
technical hobby and erroneously predicted the demise of Amateur
Radio.

Kenwood is welcome, in my book, to sell its radios in every
retail establishment from K-Mart to Victoria's Secret, if that's what
they want to do, but they can kiss me off as a customer.
(Oops, they already have- I'm using the Internet)

Mike Royko,a national newspaper columnist once said something like,
"...in spite of predictions, there's no way computers and the Internet are going to
replace the daily newspaper until a PC is just as easy to use and read
in the bathroom..."

Carry on, Sons of Marconi!

In article jherman@Hawaii.Edu (Jeffrey Herman) writes:
>
>What did you do a couple decades ago when the "Russian Woodpecker"
>invaded HF? Cease all transmission so as to not interfere with it?

No, but I didn't chase it around the band deliberately trying to jam
it either, which is the situation you described. Maliciousness is a
matter of intent.

>>If someone walks across your yard without permission and you shoot
>>them, then shoot them *again* when they run, you can't claim you
>>were just target practicing and they happened to get between you
>>and the target. The second shot shows *intent*.
>
>As usual, a ridiculous non-analogy.

It is an accurate analogy. In both cases we are dealing with
trespassers. In neither case is it proper to pursue and assault
the trespasser repreatedly. That's vigilantism, and is outside
the law.

Not at all. I have advocated speed limits consistent with roadway
and vehicle design. The reason I have advocated such is because
otherwise the law will be widely violated, with the consequent
loss of respect for law in general. Fortunately, some states
are beginning to realize this. Georgia just raised the interstate
speed limits (effective July 1) back up to a more rational level.

>their transmission? I think the answer is obvious. And I believe
>this was what the FCC official was thinking when he retorted with
>"Interfering with whom? They're not making an authorized transmission
>so you're not causing interference."

97.101d does not say "harmful interference" (a specific legal term of art). It says *willfully or maliciously interfere* with *any* radio communications or signal. The key words are "willfully and maliciously". It is a matter of intent. As in the case of shooting the trespasser repeatedly, you are in violation when you show *intent* to behave willfully and maliciously, regardless of whether your target is a wino, a sneak thief, or a church deacon, or a child. It is *your* action that is in question, not that of your target. That someone else may be violating the regulations gives you no license to commit violations yourself.

Attempting to operate legitimately on a frequency where a bootlegger is operating is not willful and malicious behavior in itself, but chasing the bootlegger from frequency to frequency is. That shows your intent is not legitimate operation. It shows that your intent is willful and malicious interfrence. And 97.101d prohibits that absolutely. There are no exceptions because the communications with which you are willfully and maliciously interfering happen to be themselves illegitimate. You are only responsible for your own actions and intent, not that of others.

>my attic. How much separation is required between antennae on
>different bands?

That depends on how the front end circuits of the radios are designed, David. There have been cases of the IC-706 blowing its 2m preamp because of transmission on HF with the HF and 2m antennas mounted closely together on a vehicle. If you look at the circuits, it should be obvious why this is so. The 2m and HF sides both employ low pass filters in their receive sections. Since HF is lower than 2m, it will pass unimpeded to the 2m front end (not quite, there's a bandpass filter in there too, but its skirts aren't very deep). The vice is not versa, however. The low pass filter in the HF rig is sufficient to keep the higher frequency 2m energy from reaching the HF active devices.

What this means in your case is that the lowpass output filter of the CB should be sufficient to reject the 2m energy, but there could be a problem the other way. The CB probably doesn't run enough power to cause harm, however. In the case of attic antennas and a real HF rig, however, there could be a problem. A 100 watt HF rig could blow the front end of your 2m rig without the additional isolation of some antenna separation. Vertical separation gives much more isolation than horizontal separation, so it is more important to separate the antennas by height than by horizontal distance (the two will typically be cross-polarized as well, and that offers even more isolation). If that is impossible, then additional filtering may be required for the 2m rig.

>how to do this??

What you need is called a simpatch or simplex autopatch. Connect Systems makes one. It allows you to control the patch remotely by signals on the operating channel. It samples the operating channel periodically when it is transmitting (for a few milliseconds every second) looking for a carrier or control signals from your end. When it hears a carrier, it turns the link around and allows you to talk or control the patch.

The problem you'll face if you operate SSB is that you won't be generating a carrier for the simpatch to detect, so it won't know when to turn the link around. If you operate FM or AM this problem will be moot, but SSB poses a real problem. One thing you might be able to do is to transmit a pilot tone and build a pilot tone detector for the receiver which will simulate a COR signal for the simpatch.

Note well that this isn't a secure system, and anyone monitoring will learn the patch access codes and will be able to access the patch themselves after you finish. Also, this type of operation would be illegal under US rules, check your national rules to see if it is allowed there.

4631. Ham Radio Help needed in Tel-Aviv

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-30 00:00:00 UTC
From: gsmlrn@mendelson.com
Message-ID: <1996Jun30.124245.695@gsm001.mendelson.com>
Source record: 221926
Cross-posted to: rec.radio.amateur.misc,soc.culture.jewish,soc.culture.israel

Hi,

I am leaving today (Sunday 30 Jun) on a "pilot trip" sponsored by Tehiila.

I was hoping to use the radio as a way of making contacts for job interviews.

I received the reciprocal licensing information from the ARRL yesterday
and found that is was printed from a web page from the IARC.

I looked up the web page and found that the phone number for the Ministry
of Communications was (03) 512-6270. Since I will not have time to get
a license by mail, I was trying to arrange it by fax, as I need a permit
to bring in a radio.

After getting up this morning and calling at 2,3,5, and 7 am my time,
I finaly reached a person who told me I had a wrong number. I also had
gotten an incorrect number from the local Israeli consulate.

If someone out there is reading this Sunday or Monday and knows the correct
phone number (and address) of the office that issues reciprocal licenses in
Israel, would you please leave me a message via the Tehilla office at
(03) 523-2713. You could try emailing me, but I will not be able to get it
after 2pm (9pm Israel time today).

Also if you have a 2m ht that I could borrow or buy cheaply, would you please
also leave me a message.

Thanks and 73,

Geoff.

More On the 2m/70cm Band Challenge:-

The challenge to the 2 meter and 70 cm bands by LEO interests has received a great deal of publicity in recent weeks. The bare-bones facts are contained in the QST editorial for July 1996, which has been widely distributed already, including in the July Pacific Division Update. Little has been available so far, however, on the WHO, WHAT, and WHEN of the matter. This Update will attempt to fill this gap. There are two parts to this special Update. The first part, consisting of 6 main sections, gives details that were not available when the news first broke. All this information has been obtained from public sources.
The second part of this special Update is a copy of the July QST editorial, for those of you who may not have seen it already.

1. WHO are the "little LEO" folks?

In 1993, the FCC allocated several bands to the Non-Voice Non-Geostationary (NVNG), low-Earth orbit ("Little LEO") Mobile Satellite Service, which uses small satellites at 650-1300 miles altitude to provide data communication services.
The NVNG service is based on small satellite technology pioneered by the Amateur Satellite Service. Approximately 13 million commercial NVNG user terminals are expected to be in service by the year 2000.
Orbcomm (Orbital Communications Corp.) is a joint venture between Orbital Sciences Corporation of Dulles, VA and Teleglobe Canada. They have two satellites in orbit (launched April 3, 1995) with plans to launch the remaining constellation, for a total of 36 satellites, beginning around the end of this year. Satellites are being built by Orbital Sciences in Germantown, MD (former Fairchild facility) and launched on Pegasus XL launchers. Uplinks are 2400 bps FSK in the 148-149.9 MHz band, user downlinks are 4800 bps FSK in the 137-138 MHz

band, with beaconing in the 400-401 MHz band. Their two satellites are the only little LEOs actually in orbit. Orbcomm has an informative Web site at: http://www.orbcomm.net.
Starsys (Starsys Global Positioning, Inc.) of Lanham, MD, is now owned (80%) by GE American Communications. They were previously owned by NACLS (the US subsidiary of a French company that operates System Argos). They will most likely begin launching their constellation in early 1998. The satellites are being built by Alcatel (Toulouse, France). Launch services have not been announced, but likely candidates are Cosmos or Roket (Russia), Pegasus, LLV (Lockheed Martin) or Delta. They plan to use the same frequencies as Orbcomm, using spread-spectrum technology.
VITA is a non-profit development organization based in Arlington, VA. They were teamed with CTA Incorporated, but suffered a launch failure in August 1995 (the first LLV-1 launch). The VITA-CTA agreement ended and VITA is now partnered with Final Analysis, Inc. of Greenbelt, MD for the ownership of a single transponder on the FAISAT-2v satellite. This satellite is a hybrid US-Russian effort, and should be launched in the September time frame on a Cosmos from Plesetsk, Russia. VITA's uplinks are the same as Orbcomm and Starsys, with the downlinks in the 400-401 MHz band. VITA's uplinks are not from mobile terminals but rather are from a few fixed gateway stations. VITA has an informative Web site at: http://vita.org/. Final Analysis has an experimental license for the remainder of the satellite that allows for a limited number of user terminals to uplink at data rates from 1200 - 19200 bps GMSK in the 455-456 and 459-460 MHz band. Downlinks are in the 400-401 MHz band, ranging from 1200-38400 bps GMSK. Final Analysis has a Web site at:
http://www.uscom.ch/companies/it/facs/facs.html.
Those are the only little LEO companies that presently hold licenses.
The remaining companies that have applied for licenses are GE Astro Space, Princeton, NJ; Final Analysis Inc. (FAI), Greenbelt, MD; E-Sat Corp., Denver, CO, a subsidiary of Echostar Corp.; LEO One USA, a subsidiary of LEO One Panamerica of Mexico City; and CTA Corp., Rockville. MD. CTA has a Web site at: http://fester.cta.com/.

2. WHO are the consultants who introduced the "candidate bands" at the May 7, 1996, meeting of the Informal Working Group 2A (IWG-2A)?

Mary Kay Williams, Final Analysis, Inc., 7500 Greenway Center, Ste. 1240, Greenbelt, MD 20770.

Leslie Taylor, President, LTA, 6800 Carlynn Court, Bethesda, MD 20817.

3. WHAT are the "candidate bands" introduced at the May 7 meeting?

The "candidate bands" proposed by these consultants to IWG-2A on May 7, 1996, are the following (listed in MHz):
138-144, 144-148, 216-218, 380-400, 401-406, 406.1-410, 410-420, 420-450, 450-460, 460-470, 790-862, 890-902, 1427-1432.
Obviously, there are "incumbents" (such as ourselves) using these bands.
Bands that would be technically suitable but were not included are the VHF TV bands (notably 174-216 MHz) that the broadcasters eventually will be relinquishing when digital TV has been fully implemented in the UHF band.
Research in the "Spectrum Guide: Radio Frequency Allocations in the United States 20 MHz-300 GHz" by Bennett Z. Kobb, ISBN 0-9641546 indicates that the "little LEO" folks currently have the following allocations: 137-138, 148-150.05, 312-315, 387-390, 399.9-400.05, 400.15-401 MHz.
We are actively learning more about these consultants and their roles.

4. WHAT is the future planned meeting schedule for IWG-2A?

It appears that publicly scheduled meetings of IWG-2A will be held about every three weeks. The last such meeting was June 18, 1996. To keep up with the scheduled public meetings and locations, visit the FCC WRC-97 home page at: http://www.fcc.gov/ib/wrc97/.

5. HOW does this all get resolved?

This part of the problem is very unclear as Warren G. Richards, Chair, IWG-2A, Department of State, CIP 2529, Washington, DC 20520, has stated that he does not have the authority to change any of the candidate bands listed at the May 7, 1996, meeting. So far there seems to be no known procedure for modification, change or resolution to end this conflict between the incumbents (the current users of the spectrum) and the "little LEO" folks and their consultants.

6. WHEN does it get resolved?

This problem is likely to be with us until at least November 1996 before resolution. The various Informal Working Groups have a target date of November to complete their preliminary work and to have their data and positions ready for the Advisory Committee.

So WHAT do we do now?

There are a series of important actions for all interested hams to do --

1. Monitor the progress of this unfolding drama!

For the latest news on this volatile issue, read QST, ARRL Letter, Pacific Division Updates in hard copy. Read ARRL Letter and Pacific Division Updates on e-mail. Visit the ARRL Home page at http://www.arrl.org/ and click on "Band Threat News." Visit also the WWW Pacific Division Home Page -- http://www.pdarrl.org/. To monitor the FCC's view of the ongoing WRC-97 preparations, visit its WRC-97 home page at: http://www.fcc.gov/ib/wrc97/.

2. Join ARRL!

The ARRL is the only effective national organization fighting for YOUR 2 meter and 70 cm. hand held operating privileges. It is easy to join and help us win this battle to preserve our privileges.

3. Then write. Right now -- and continue through Summer and Fall!

As it appears there will be no early resolution to this conflict, it is important that every interested ham write ---
Comments by e-mail should be sent to: wrc97@fcc.gov. Hard copy written comments, with an original plus one copy, should be sent to: Office of the Secretary, Federal Communications Commission, Washington, DC 20554. Each comment should include at the top, "Reference No. ISP-96-005" and "Advisory Committee Informal Working Group 2A."
We must keep up this activity consistently throughout the Summer and Fall until November. Other strategic and tactical activities are in process and being developed and will be implemented as time progresses.

***

Following is the editorial that appeared in July QST.

It Seems To Us --

Write Now!

Get out a pen and paper, or boot up your computer. There's work to be done! Your help is needed to defend two meters and 70 cm. Yes, that's right--the two most popular and most crowded amateur VHF/UHF bands! But don't panic, and don't "go ballistic."
Here's what's happening, and what you can do about it.
The United States is preparing for the 1997 ITU World Radiocommunication Conference, WRC-97. In the past, the public has been able to participate in the preparations for such conferences by responding to FCC Notices of Inquiry. In March, the FCC announced a streamlining of its International Bureau's preparatory processes for WRCs. Under the new scheme, the NOIs have been eliminated in favor of increased emphasis on WRC Advisory Committees.
For WRC-97, a series of Informal Working Groups (IWGs) of the

Advisory Committee has been created to address specific agenda items. The output of each IWG will go directly to a joint FCC-NTIA-Department of State Steering Committee of the Advisory Committee. There, draft proposals as received from the IWGs will be reviewed and forwarded to the FCC for possible release as preliminary US proposals for public comment.

In announcing the streamlined WRC preparatory process, the FCC tried to reassure those who might be concerned about reduced opportunities for public participation: "Interested parties should note that input to the Advisory Committee may be sent at any time...." A pre-press version of this editorial, circulated far and wide by e-mail and packet radio, caused so much input to be generated--more than 1,000 comments in less than a week--that the FCC had to modify its procedures to cope with the deluge!

Hold that thought while we shift gears to the substance of the issue.

One of the WRC-97 agenda items includes consideration of possible additional frequency allocations for the mobile-satellite service. So-called "little LEOs," low-earth orbit satellites below 1 GHz, already have allocations. Their proponents claim these are inadequate and are trying for more. The needs of little LEOs are being addressed in IWG-2A, chaired by Warren Richards of the Department of State. The ARRL technical relations staff participates in IWG-2A to represent Amateur Radio interests.

At the May 7 IWG-2A meeting, an industry representative presented a list of "candidate bands" for little LEOs. The list included a number of bands that would negatively impact existing services, and does not include others that would appear to be technically more feasible but to which strong objection from incumbents could be expected --- the point being that some political, rather than purely technical, judgment already has influenced the list. We have asked for, but to date have been given no explanation of why some bands were included and not others.

Incredibly, 144-148 and 420-450 MHz were included on the list! This is the first time in memory that another service has been proposed for the two-meter amateur band. We must make sure it is also the last time.

We do not need to explain to ARRL members the extensive use that is made of these bands by amateurs. The two bands provide the backbone of our local public service communications effort. Voice and data, mobile and fixed, even television--the list of present amateur uses is a long one, and of future uses is even longer. Both are already used for satellite services and for moonbounce and extended-range terrestrial operations requiring extremely sensitive receivers and high levels of effective radiated power.

Apparently we did need to explain all this to the little LEO industry representatives, so we did just that--both at the meeting and in a follow-up letter on May 15. We also explained that we had to regard the matter as extremely serious. No one with the slightest background in radiocommunication could possibly believe that a mobile-

satellite service could be introduced into either band without disrupting existing and future amateur operations. Therefore, we said, if we did not receive assurance that they would be taken off the list of candidate bands by the deadline for this issue of QST, we would have no choice but to bring the matter to the attention of the entire membership.

The response we received was unsatisfactory. In effect, we were told the little LEO industry would consider our views but that until their spectrum needs are satisfied, all bands must remain under consideration.

So, this is a call to action. We must get across to the industry and government participants in IWG-2A that the 144-148 MHz and 420-450 MHz bands cannot be considered as candidates for mobile-satellite services. We need to drive the point home so forcefully, with so many grassroots responses, that no one is ever tempted to try this again.

Which brings us back to that invitation for "interested parties" to send input "at any time." There's no time like the present! According to the Commission's new procedures, comments by e-mail should be sent to: wrc97@fcc.gov. Written comments, with an original plus one copy, should be sent to: Office of the Secretary, Federal Communications Commission, Washington, DC 20554. Each comment should include at the top, "Reference No. ISP-96-005" and "Advisory Committee Informal Working Group 2A." FCC staff assures us that comments will be given prompt consideration, and asks that parties refrain from filing comments in accordance with previous instructions. Do comment. But be civil. Don't abuse people who are simply doing their jobs. We have to get across that casting covetous eyes on amateur bands is counterproductive, and contrary to the public interest. To accomplish this we need a lot of comments, including yours. But remember that the objective is to educate and persuade, not to intimidate. We don't need to. The facts are on our side.

For the latest news on this particular issue, check the ARRL Home page at http://www.arrl.org/ and click on "Band Threat News." Then write. Right now!--David Sumner, K1ZZ

4641. New server for w1aw-list

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-30 00:00:00 UTC
From: n1ist@netcom.com
Message-ID: <n1istDttI3s.ABG@netcom.com>
Source record: 221936

Since there appears to be no hope that Netcom will ever improve its
mailing list services, w1aw-list has been moved to a server down at
ARRL headquarters.

If you want to continue to receive the W1AW bulletins, please resubscribe
to that list as follows: (note that the procedure is different from Netcom's)

****

SEND A MESSAGE TO w1aw-list-request@arrl.org WITH THE SUBJECT (NOT THE
BODY)

subscribe user@host.com

WHERE user@host.com IS YOUR E-MAIL ADDRESS

****

There is no need to unsubscribe from the Netcom list; I'll take care of
that myself.

Thanks again for your support and patience with my w1aw-list over the
years. Note that this change will not affect any of the other ham-radio
related lists at Netcom.

W1AW-list is now maintained by Jeff Bauer, w1aw@arrl.org, and the League
list server by Jon Bloom, jbloom@arrl.org

: have the knowledge to peak a radio. Besides, do you think the Smiths

The odds are probably pretty close to 100% that the first high power
FRS radios and repeaters that show up on the band are going to be built
and run by ham radio operators. Many of the illegal operators using
digital modes outside the CB bands are hams, amplifiers are built by
hams, and a lot of the illegal operators in the GMRS are hams too. We
have the knowledge and equipment to use those bands, your typical CB
or FRS user does not. If they do have the equipment they probably got
it from a ham operator.

While re-reading the June issue of QST in my favorite reading place, I ran across an article on how to access the FCC database on the Internet. It is too large for the average person to handle (30 megs), but the University of Arkansas at Little Rock kindly does this for us each day.

Being one of those that applied for an original call, I plugged in the new call and there it was! It was issued to me on June 18. It is now June 29, and I haven't received anything in the mail. I was wondering if anyone has actually received their paper license yet.

4650. Re: CW can not die...

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-30 00:00:00 UTC
From: gerde@gilbreth.ecn.purdue.edu
Message-ID: <4r6fre$l9o@mozo.cc.purdue.edu>
Source record: 221945
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.digital

I think that the agrument should be not is CW going away rather
is it necessary as a testing element. The Army has dropped CW for
communications purposes as the battlefield moves too fast for both
voice and CW to keep up. The Navy was first with Tactical Data just
to keep up with ship to ship missles, aircraft and subs. However
there are Morse Code operations in dealing with ship to ship routine
operations (flashing lights), Special Operations groups (SEALS, SF, etc)
and Morse intercept (third world military ops).

We must realize that the world moves very fast nowdays. High speed
digital is necessary for that communication. I think that many of us
have romanticized code, that of being the lonely operator that saves the
day. Those visions are of the past, WWI and WWII. The world is different now. It moves
faster. Code was of a slower age.

CW and code still have a place. It is fun to do. It has its challenges. But it is not
necessary as a testing element. Knowledge of
technology is. Knowledge of the law, rules and regulations are even
more important. This what must be tested. Very dry and dusty -- not
very romantic.

I just bought the MFJ 949 300 watt tuner. Have used it the last few days.
It seems to work just fine. The dual-needle SWR/power meter is
great. With all of the bad comments about MFJ on the net, I opened
the box up expecting a mess inside. I was pleased to see that it was
constructed OK.

For the money invested, MFJ appears to put out reasonable products.
Sure, I'd like that $800 tuner, but the MFJ one was a lot easier on the
budget.

Let's be a bit more specific here. You use your USA call in PR and the *US* Virgin Islands because they are territories of the United States. The *British* Virgin Islands are nearby and another vacation spot, but different rules apply there. The ARRL can assist you on licensing if you are traveling to the BVIs.

How do I obtain CT?

K1EA Software
Distributed by XX Towers, Inc.
814 Hurricane Hill Road
Mason, NH 03048
Orders: 603-878-4600 FAX: 603-878-1102
Support: 603-878-4200 BBS: 508-460-8877

Updates to the CT sofware are available only via the telephone BBS.
There is presently no way to get updates via the Internet.

CT Version 8.53 was the last to support 8086/80286 PCs. You can still
order this version from
K1EA Software. CT Version 9 runs only on PCs using an 80386 or better.

A very old version of CT 6.26 is available by anonymous FTP from:

ftp.coast.net:/SimTel/msdos/hamradio/ct626.zip

Note that this version is several years old, has very little in the way
of documentation, and there is
NO support from K1EA.

This isn't true. In three of the last six issues, the rooms had wood panelling, and the other three had either wallpaper or were painted. So don't go saying that the photos are all the same because they're not.

Also, in one of them the guy was smiling, and in the others they weren't.

So there.

Source record: 221813

Hi all,

Some new improvments..

The National SKYWARN Homepage has moved to a new site at
http://www.skywarn.org/

The Colorado SKYWARN Homepage has moved to a new site as well at
http://www.skywarn.org/co

Basically, both sites are now on a faster server (Sparc 20) so response
times should be somewhat better (unless it is the early afternoon, then
the whole Internet is just a crawl!)

Take care and 73's,

Chris Knauer

KAWIN NEWS

KaWin 6.39 is ready for download! Minor changes to the help file too.

KaWin 6.39's enhancements are largely focused on the HF CW or RTTY operator, but there are some minor fixes that will be welcomed by all. They are described in the Squawk file.

HF DX and contest operators will find a competitive advantage in the new option to send every keystroke as it is pressed, and those with access to a DXCluster will be one click ahead of the gang when a new spot appears by clicking on a DX spot and instantly setting the callsign in the HF context. Also, the automatic logging of HF QSOs in non-connected modes is now subject to operator confirmation - no more log entries for unsuccessful DX calls.

All currently reported bugs are fixed in 6.39.

Guilty as charged ... but with extenuating circumstances!

Even with a ham ticket and a BSEE degree, that describes my VCR. Why?
It seems that setting the time on the darn thing is the surest way to
invite a power outage. Sort of like washing your car invites rain. <g>

Why is it that my $10 alarm clock with a $1 9v Energizer for backup can
go for hours without power and keep at least some semblance of the right
time? But let the power flicker off for a second or two, and it's
"Flashing 12:00" time for my VCR that cost 20-30X as much!

Good propagation on 10! Well apparently you didn't listen while field
day was going on. The band never died. I was hearing stations all over
Texas, Oklahoma, California, Nevada, and a few others from here in
Arizona. As soon as field day closed so did the band. Imagine that! It
is not the band that is dead it is the number of operators using it.
If everyone used it the band might not be as dead as you think it is.
Field day proved that.

Messages are whatever length they are. In some cases they are standard
ARRL radiograms, in others they are plain text. In either case, you have
to handle them as is, word for word, regardless of mode. That's what
traffic handling is about. You can't paraphrase or abbreviate, you have
to handle the message as given.

The way some of us handled NTS on voice was with another marvelous bit of
technology, the tape recorder. We'd listen along with the machine, and ask
for missed words or spellings as necessary, but we could transcribe at
leisure after the transfer. Using VOX, we could operate semi-break-in on
voice, so we could ask for fills as needed at the end of each sentence.
When we had books of traffic, we'd pre-tape them before the net and play
the tape to the receiving station, who was taping too. That way we could
transfer at full conversational rate. It worked quite well, as witness that
we handled several times the traffic volume that our sister CW net handled
in the same hour.

Of course for more routine amateur contacts, simple conversational speed
(120 WPM) is the norm. In these cases, context is usually sufficent to
supply any fills, and 100% accuracy isn't required. Thanks to the redundancy
of spoken English, a crude form of FEC (the cocktail party effect) allows
us to gather the sense of what the other person is saying without explicitly
copying every phoneme.

>>But both are bottom of
>>the barrel methods compared to Clover, PACTOR, etc.
>
>Your digital modes work only as fast as the initiator can mentally create
>a message and type it error-free (say, 60WPM combined); another limiting fac-
>tor is how quickly the receiving op *and* destinee can read and comprehend the

>as an upperbound in speed when discussing digital comms.

Again, we have traffic pre-typed in a file, and transfered at full speed error free. If the receiving operator can't read at least 500 WPM, he needs to take a remedial reading class, but since he is capturing to a file too, that's really a moot point for traffic handling. The receiving operator can even move his lips when he reads because he's reading off-line. Most of us read faster than that, however.

For casual operation, almost all of these systems allow split screen. That allows one to be composing a response while still receiving text, so even if he only types 60 WPM (the minimum required to pass my high school typing class many years ago) the effective on-air rate is faster thanks to the overlap, IE blocks of text are ready to be sent the moment the connection is reversed. In the case of Clover, the action is quasi-duplex, allowing a very quick interaction similar to QSK CW but faster. While there are still a few hunt and peck RTTY operators using old mechanical teletype machines, even those guys often have a tape punch and can have text prepared when it is their turn to transmit.

If you operated these modes, you'd know these things. There are operator practices involved in achieving best utilization of the digital resource, just as there are for any other mode (even voice). The skills are somewhat different for the different modes, of course. Most of the digital modes are somewhat unique among amateur operations in being non-linear with respect to time, IE the overlap and off-line capabilities allow more effective use of transmit time.

Some people, like me, find that it's not significantly more difficult to upgrade from one class to another (5 WPM -> 13 WPM -> 20 WPM) than it is to upgrade from 0 WPM to 5 WPM. It's just a matter of where you are on the ladder and whether or not you want to keep climbing. (Unless you have a physical problem of some type.) The desire to advance is common, no matter where you happen to be on the ladder at the time.

So it doesn't surprise me that the average age of the Tech Plus and Extra classes are both decreasing.

Keith,

I listened to the show last night on 12160 kHz using a Icom IC725 and a
Datong active antenna at 20 feet agl, signals were consistently S9+. The
sigs were also fairly good on a Sony 7600 with a whip antenna. The
interview was very interesting, pity there wasn't a 1-800 freefone line
for listeners outside the US, 'cos I wanted to have a go at the quiz!

>know when its pumping out full power...

You can make a whip from just a 19 inch length of wire and a coax
connector, IE take a PL-259, solder the wire to the center pin,
and slip a piece of shrink wrap down over it so it can't touch
the outer wall of the connector (filling the cavity with epoxy
is even better). However, for mobile use you really want something
other than copper wire. It would be deformed with every tree branch
impact. What you want is copper plated music wire, with perhaps
an anti-corrosion nickel overplate. That's what commercial whips
are made of. Fortunately, these are cheap. You can get replacement
whips from many sources, often for only $2-$4. You can similarly
solder these whips into a PL-259 if you sand down to the copper
plate first. Your mount is just a SO-239 fixed to a plate attached
to a magnet.

There are enough variables in antenna mounting to make a ruler
measurement insufficient. You really need to borrow a meter to
trim the antenna on frequency. However, the HT is fairly insensitive
to SWR (since it usually has to work with a rubber duck which may
have a wildly varying SWR depending on how and where you are holding
it). So the antenna will work even if you don't trim it exactly to
frequency.

Did you know that there are Bulletin Board Systems (BBSes) that are oriented toward amateur radio? Well, there are quite a few of them and we are adding new listings all the time.
To find out where they are located, point your web browser to: http://www.vni.net/thedirectory and go to the "search engine." Enter the words "amateur radio" (and in a different search enter "ham"). It will return a list of area codes where the boards are located. Click on the links to go the individual area code listings.
Remember to return about once a month as we regularly find and list new boards devoted to amateur radio. There are also BBSes devoted to a wide variety of other topics that you may find of interest.

I score "3". It is not clear what that makes me from the above.

Hi there.

I have been unable to find the frequency mods for my radio.
Here in Denmark where I live, the government has due to EC regulations,
decided to liberate the rules of which frequencies you are allowed to
receive. Therefore I would like to modify my radio for a broader
frequency range.

I couldn't find any description for my radio.
But maybe you have heard of or seen such?

Looking forward to hear from you.

I don't know of a newsgroup where information about Log-EQF is generally posted but there was an e-mail reflector for users. Last I heard the owner terminated the account 2 months ago but messages are still coming out from it everly so often.

I think the address was dx-l@netcom.com but you probably can't subscribe to it any more.

Tom, N3EQF, does run a BBS from his home which is a very good source of keeping up on latest versions. The download of the complete BBS version is only about 5 minutes which at night or weekend rates is cheaper than the postage and mailer.

I did ask Tom to create an e-mail list to announce the latest version and new enhancements to Log-EQF. That was just after Dayton and he was busy with orders but like everything else I ecpect he'll get on the idea soon.

Of all the logbook software authors I think Tom has been the most dedicated and responsive of anyone I've heard of over the 4-5 years I've been using computer logging.

>it has higher throughput than OOK Morse.

Not always true. If you've worked NTS then you passed messages on voice that were at times 500% greater in length than their CW counterparts (using Q-signals and prosigns). And the WPM upper limit in passing voice messages is always determined by the speed the listener can write or type. "Please repeat all after..." must be included in calculating the "throughput" (almost as corny as your "wetware modem" expression).

>But both are bottom of
>the barrel methods compared to Clover, PACTOR, etc.

Your digital modes work only as fast as the initiator can mentally create a message and type it error-free (say, 60WPM combined); another limiting factor is how quickly the receiving op *and* destinee can read and comprehend the message. You're good at intentionally failing to include these human factors as an upperbound in speed when discussing digital comms.

Jeff KH2PZ / KH6

P.S. I know you love a large audience, but allow your followup proceed to the .policy group where the CW discussions belong.

>
>73, Jim KH2D

In the last 5 years, the US amateur population has increased from about
450,000 to a bit over 700,000, or an average of about 11% a year. That's
a bit misleading, however, since there was a spurt of growth with the
introduction of the code test free Tech (who've gone from 0% to 22% of
licensed amateurs during that period). The FCC report for the first
quarter of 1996 (reported in QST) says amateur radio in the US is
growing about 3,200 amateurs a month. That's about 5.5% a year on
an annualized basis. (Due to the government shutdown in January,
and February being a short month, growth rate for the year may
be higher than the 5.5% rate of the first quarter.)

The percentage is also lower partially because the total number of
amateurs is greater, IE 3200 a month 5 years ago would have been
an annualized rate of 8.5%. And SKs are finally starting to be
purged from the count, as the first of the 10 year licenses (plus
2 year grace period) come up for renewal. Amateur radio in the US
is still growing. Not as fast as internet users, nor as fast as CD
player penetration, but we're probably keeping up with increases
in mattress sales, IE new household formation.

The average age of licensees has declined over the last 5 years,
and that's a very good sign. In the 80s, the average age of
licensees was increasing, and that was an unhealthy trend for
the future of the service. Techs are now the youngest class,
some 16 years younger than Generals on average, and 5 years
younger than Novices. So it is clear where the reversal in
the aging of amateur radio is coming from. Even the average
age of HF licensed amateurs is declining, down to 58 now.
(Mostly due to Tech Plus and, surprisingly, Extra, both classes
have gotten significantly younger over the last 5 years.)

4696. Large Ham Classified database->http://www.sarrio.com

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-01 00:00:00 UTC
From: wb6siv@cyberg8t.com
Message-ID: <wb6siv-3006962343500001@host56.cyberg8t.com>
Source record: 221876

The Raymond Sarrio Company's Ham Radio WWW site is proud to announce a FREE Ham Radio classified advertising page at:

http://www.sarrio.com.

This new classified section will allow Hams to search for equipement with the help of a search engine--no need to scroll through 100's of listing before you find that special piece of gear. Plus, when you find the gear your interested in, each listing comes with point-and-click e-mail access direct to the Ham that listed the item.

For those Hams with gear to sell, take note! It is absolutely FREE to list your equipment within the Ham Classifieds, and there will be no posting time delays.Your posting will go on-line, in our classified search engine,in about 1 hour. All you need do is fill out a simple forms page, and upon its (point-and-click) submission, your "For Sale" advertisement is on-line.

I will be purging the classified listing initially about once every month, but that timeline will shorten as our classified numbers go up. Give it a try, and let me know how you like it. 73's Ray

Howdy..

I have a few Questions...

I need info on building a Mobil Mag mount antenna for my Truck to use with my HTX-202..

I have been given some advice, but i am looking to build something cheap but looks NORMAL, someone told me to use a coat hanger, etc ..

I have 12 guage wire i can use, but need a little info, what length should i cut it at, to use it at 145.470 (local Repeater) I dont have any kind of swr meter or anything but my radio which will let me know when its pumping out full power...

any help will be most apprecaited (text files. urls. graphics, drawings , etc,, attach then to a e-mail please!!)

ALSO

I am looking for some ham mailing lists.. i am starting one for my areas repeater.. (for the members who have e-mail accounts..) and would like to join a few and echo some good info etc...

Please let me know how to subscribe to those..

THANX!!!

[Attributions on my news reader too confused to accurately attribute]

>> >The FCC licenses classes Tech, Tech Plus, General, Advanced and Extra
>> >to use ALL frequencies above 300GHz for amatuer radio communications.
>> >CQ X-Ray anyone?

>> I wonder if the NRC accepts FCC jurisdiction on these frequencies?
>>
>> Gary

The FCC can only regulate waves. They can not regulate particles. And they have to prove that a given transmission was waves, not particles, before the courts will accept an enforcement action.

All this is now coming to a head. The FCC has filed a forfeiture and monetary fine action against Dr. Al Dente, a Cincinatti, Ohio oral surgeon, for unlicensed operation of an X-ray machine that interfered with a top-secret government mind-control experiment nearby. The American Civil Liberties Union has taken up the case on behalf of the defendant.

The ACLU has hired Johnny Cochran and F. Lee Bailey as counsel. Attorney Robert Shapiro was also asked to sign onto the defense team. He declined, saying that the world of quantum physics was just too much like an earlier trial he had worked on with Cochran and Bailey. "Once down that path was enough."

Cochran is now scouring physics and calculus texts for rhyming one-liners. The flamboyant attorney was reportedly delighted to be working in a field where it is impossible to simultaneously determine where something is and how fast it's moving, and where the very act of observation taints the evidence.

Bailey's chief witness will be psychologist and self-styled "global midwife" Jean Houston, who will talk jury members through imaginary conversations with Albert Einstein, Enrico Fermi and Niels Bohr. Earlier reports that the defense would also call Erwin Schroedinger turned out to be incorrect. "Dr. Schroedinger was a distinguished scientist," said Bailey, "but his hypothetical cruelty to imaginary cats could be a negative for the jury." Schroedinger was both available and unavailable for comment, but would not reveal which.

* * * * *

[This was a joke. This was only a joke. Had it been a serious post, it would have mentioned Socialism, laissez-faire Libertarianism, and CW testing as a metaphor for the decline of Western Civilization.

We now resume our regularly scheduled flame war.]

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the
networking picture, how to link areas using different networking
schemes, how to set network parameters, etc. The list's charter will
be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further
details about the Net-SIG (including upcoming conferences).

JOINT AMPR.ORG IP COORDINATOR FOR OHIO SUBNET (44.070.XXX.XXX)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

(see also Tony Schliesser)

[Editor's note: All ampr.org coordinators are listed in the document at:

ftp://ftp.ucsd.edu/hamradio/amprnets

]

Chuck Adams K5FO

adams@sgi.com

MAINTAINER OF STANDARDIZED INFO SHEETS ON QRP RIGS

They are available from the QRP-L WWW Pages at:

* http://qrp.cc.nd.edu/QRP-L/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

OWNER OF QRP-L MAILING LIST

The QRP mailing list is open for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building, etc.

This list was started by me with an announcement on the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M, maintained the mailing lists and FTP area from then through August 1994 on a system at Thinking Machines Inc., think.com. Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all his hard work during the time that QRP-L was on netcom.com.

I am still the keeper of the non-electronic archives, including copies of some schematics, etc. Contact me directly or watch this list for more info.

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your callsign, if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE QRP-L

Edward Addy KE0EG

eaddy@nacec.org

EXECUTIVE DIRECTOR, NORTH AMERICAN CENTER FOR EMERGENCY COMMUNICATIONS

After a large disaster strikes your community and your family, I am sure you will agree that its a little late to start building a massive rapid response, emergency communications system supported by thousands of people within companies, organizations and serving as volunteers to provide essential support services.

We are the North American Center For Emergency Communications Inc. (NACEC), a federally-registered non-profit organization serving North America since 1992. We have been developing a system that merges many different technologies to create a unique, high-capacity, rapidly-deployable solution to the problem of communications outages and shortages that occur following a large disaster. Our volunteer network in using the Internet as its communications backbone, is itself using one of the many technologies employed in NACEC's overall solution.

To help ensure the greatest possible effectiveness in as many communities as possible throughout North America, we are developing a very large volunteer network of community volunteers (Community Ambassadors) who work with our staff and their local communities. If you are community active and are interested in helping, we need your help, NOW. Please, don't wait until disaster strikes, help us to be prepared and be ready to assist your community.

The more communities that are represented by our volunteer network, the more effective we can be in disaster preparedness, emergency operations and in the area of emergency and military family message handling and delivery.

As a NACEC volunteer (Community Ambassador) you will assist with the movement of information that is vital to the continued success and growth of this organization and the survivability of your family and your community following a large disaster.

This project is growing rapidly, as we locate and add new dedicated volunteers from as many communities as possible from across North America. I hope you will join us in making this organization a

success.

To find out more about how you can get involved in this project and use your Internet skills to help your community, please review the information that is in our WWW Homepage area which can be found at:

http://www.nacec.org/

An electronic volunteer application form can also be found there as well. Should you have any questions, please address them to my E-mail address above.

NEWS, INFO, RUMORS, DXPEDITIONS, IOTA ACTIVITIES and more

DX CALENDAR, WABA AWARD (rules & scores) now available

in English Version and Italian Version

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in
love with RS sats and DOVE telemetry. I'm the Shortwave Listening
(SWL) coordinator of the Italian Amateur Radio Association and I have
a regular SWL page in their official magazine Radio Rivista. Recently
I joined the 425 gang that produces the 425 DX News bulletin. I
translate it into English and send it to many DXers via E-Mail. I also
maintain a WWW page to provide the bulletins graphically with previous
numbers and more to come. I've been an SWL since 1974 when I received
a receiver as gift from my parents. Now I'm 36 and I'm running also a
free BBS devoted to HAM/SWL.

AUTHOR OF THE FOLLOWING MS-DOS HAM PROGRAMS:

* AutoExam - Examination simulator and study aid
* AutoCW - Morse Code practice program
* DOSGATE - allows users to run programs on your PC remotely
(AutoExam compatible)
* AutoCall - Allows use of the Buckmaster HAMCALL CDROM online
callbook with DOSGATE
* AutoFax - Allows reception of weather fax using Kantronics TNC's
* SeeSats - Real time satellite tracking (text only), DOSGATE
compatible

Most of these programs are available via anonymous FTP from:

* ftp://oak.oakland.edu/SimTel/msdos/hamradio/
* ftp://wuarchive.wustl.edu/systems/msdos/msdos/hamradio/

or write me at:

7 Redfield Circle
Derry, NH 03038

and enclose:

* A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5"
or 5.25").
* A Self Addressed STAMPED return diskette mailer.
* A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

MAINTAINER OF THE REC.RADIO.AMATEUR.* SUPPLEMENTAL ARCHIVES AVAILABLE FROM:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

MAINTAINER OF THE INTERNET HAM RADIO CALLBOOK SERVER AT:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the
server's help facility, the rec.radio.amateur.misc FAQ, or additional
server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Look for the new server in two or three months. Until then you can access the current one.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

My electronics expertise is mostly analog, but I have some insights
into DSP applications that can do better in what used to be the analog
dominions. I can be of the most help with low-frequency analog stuff,
particularly measurements and low-level/low-noise/low-distortion
applications. I breadboard with IC's, discretes, and surface mounts
(which I prefer to use now, as surface mounting requires less drilling
of PCB boards once they are etched). My electrical engineering
education (Ph.D.) emphasized control systems. I also have a clear
understanding of transmission line measurements and behavior (a
personal research interest for the last 25 years or so).

Barry Buelow WA0RJT

Barry Buelow WA0RJT Packet BBS in Cedar Rapids, IA
barry@ia.net WA0RJT@WA0RJT.IA.USA.NOAM

The Tuscon Amateur Packet Radio (TAPR) Bulletin Board Special Interest Group (BBSSIG) is sponsoring a working group to generate and distribute a series of information bulletins which will serve to instruct packet radio users in a variety of areas. These bulletins will be distributed via the packet network and can be retained at each BBS in a file area. An index will be provided to allow users to find information they desire.

If you are interested in actively participating in this effort and can work on a collaborative effort, please speak up. Send a message to my E-mail address above.

[Editor's Note: As this project is still very much a work in progress, and its eventual products will certainly be made available via several information sources (including the Internet) as soon as they are completed, I'm sure Barry would appreciate it if only serious volunteer contributors contacted him at this time.]

MAINTAINER OF LIST OF PERIODICALS OF INTEREST TO QRP ENTHUSIASTS, ELECTRONICS BOOKS OF INTEREST TO QRP ENTHUSIASTS, AND ANTENNA BOOKS OF INTEREST TO QRP ENTHUSIASTS

Available from the QRP-L WWW Page at:

http://qrp.cc.nd.edu/QRP-L/index.html

Since QRP-L has moved to lehigh.edu, the articles will also appear at this address on or about June 1, 1995:

http://www.lehigh.edu/lists/Archives/qrp-l/

(Note: the "A" in Archives is capitalized.)

Please direct all submissions, feedback, and administrivia for these articles to my E-mail address above.

I serve as an Educational Advisor to ARRL and hence fall within the loose bounds of their field organization. I know something of the fundamentals in electronics, having written the current Chapter 6 of the 1995 ARRL Handbook, and something of antennas, with a series appearing in Communications Quarterly. I serve on the Board of Directors of 10-X International and maintain memberships in most of the QRP organizations, as well as the Quarter Century Wireless Association (QCWA). As to what I do not know, there are no limits.

I also know something of the craft of technical writing and editing, being director of Techwright, an occasional consulting operation in this field with my wife, Jean, N4TZP, who has been a technical editor and writer since 1980.

GRAPES 56 KBAUD PACKET RADIO MODEMS

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(see also Bob Merritt)

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

William (Bill) Coyle N3OGH

wcoyle@iss.dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having gained some experience on the hardware end of setting up such a station).

Michael Crick

mica@crick.com

Bellevue, WA

http://crick.com/mica/

I design and write software. I have written a top of the line Ham Radio training program for Windows called "Ham University". You can download a free demo copy from my web site.

I also helped write Microsoft Windows. I am not a ham operator but more of a web nut (I was part of the group at BBN that developed the ARPANET back in 1967). However, in designing Ham University, I got a lot of expert advice. I think it will meet many people's training needs.

The purpose of this list is to allow discussion about commercial land-mobile radio equipment, its use and maintenance.

OWNER OF THE MILITARY AFFILIATE RADIO SERVICE (MARS) MEMBERS MAILING LIST.

The purpose of this list is to allow discussion about MARS (Military Affiliated Radio Service) activities. The list is open to all branches of MARS.

To subscribe to or unsubscribe from either of the above lists, please send electronic mail to:

listserv@stat.com

and include the command:

subscribe list-name

or

unsubscribe list-name

as the first line of your message, where list-name is either land-mobile-radio or mars-list. An acknowledgement/welcome message should follow very shortly.

MODERATOR OF REC.RADIO.INFO NEWSGROUP:

news:rec.radio.info

Please direct all rec.radio.info submissions to rec-radio-info@stat.com and all feedback and administrivia to rec-radio-request@stat.com.

The Stanford Amateur Radio Club, W6YX, will be taking over the
Ham-Univ Mailing List for College and University Amateur Radio Clubs,
effective immediately.

The new address will be: ham-univ@w6yx.stanford.edu

The old address at the New Jersey Institute of Technology will
continue to work for the time-being as a forwarder to the new address.

To subscribe or unsubscribe, send mail to:

ham-univ-request@w6yx.stanford.edu

with the body saying "subscribe" or "unsubscribe".

Current subscribers have been automatically added to the new mailing
list.

Please let ham-univ-owner@w6yx.stanford.edu know if there are any
problems.

Stanford Amateur Radio Club (W6YX) WWW Page is at:

http://w6yx.stanford.edu/

AMATEUR RADIO: ELMERS LIST INFO AND ADMINISTRIVIA

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of this somewhat radical new standard, especially to many users who can't or won't use WWW. Those users should be assured that I wouldn't have adopted a standard unless it was easily human-readable by those accessing this document as straight ASCII. The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all http: URL's in this directory also have corresponding ftp: or gopher: URL's).

For more information about URL formats, see:

ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview:

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of

Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

As part of the Elmers List's entry into the World-Wide Web, I've also provided a formatted WWW Registration Form. It may be accessed from:

http://www.gonix.com/pschleck/elmers/register.html

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@gonix.com, the default Reply-To: of this message). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 5 or 6:

1. World-Wide Web (WWW): This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as

hypertext. The home site at www.gonix.com features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

+ http://www.gonix.com/pschleck/elmers/
+
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
+ http://www.cs.ruu.nl/cgi-bin/faqwais *

(Note: Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

2. Usenet News: This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

+ news:rec.radio.amateur.misc
+ news:rec.radio.info
+ news:rec.answers
+ news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

3. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

+ ftp://ftp.cs.buffalo.edu/pub/ham-radio/
+ ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
+ ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

4. Internet Gopher: The latest copy of the list should be available from the following Gopher sites:

+ gopher://jupiter.sun.csd.unb.ca/
+ gopher://gopher.univ-lyon1.fr/
+ gopher://ftp.win.tue.nl/
+ gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

5. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

6. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index/subject
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail
within 24 hours (the mail-server uses batch priority to reduce
system demand).

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet, as well as system administration of UNIX and UNIX-like operating systems (with an emphasis on networking, E-mail, etc.). My current concentration is on writing UNIX based tools (e.g. software for logging, antenna design, propagation analysis) that can be shared throughout the ham community. I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups. Information on the mailing lists offered can be had by sending an e-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message body. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally

available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address listed on your license.

MAINTAINER OF THE INTERNET DX MAILING LIST

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message body:

subscribe dx

David Newkirk WJ1Z

webmaster@arrl.org

AMERICAN RADIO RELAY LEAGUE (ARRL) WEBMASTER

The American Radio Relay League is pleased to announce the startup of ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are *essential* to its ongoing success, so please drop by and say hello!

Bob Nielsen W6SWE

Bob Nielsen, W6SWE Internet: w6swe@tapr.org
Tucson, AZ AMPRnet: w6swe@w6swe.ampr.org

TUSCON AMATEUR PACKET RADIO (TAPR)

I am no longer a TAPR officer, but try to help out with the TAPR file server and am the "official" contact person on the Internet and CompuServe (71540,2364).

To access the TAPR file server, send E-mail to:

file-request@tapr.org

To get the help file and a list of available files, send the following commands in the body of the message:

help
dir
quit

All mail sent to that address is not read by a human. Conversely, mail sent to tapr@tapr.org is read by a human who will be glad to take your orders or process membership applications, but cannot send you file server files.

Joe Nobody N0CALL

nobody@nowhere.nodomain

REC.RADIO.AMATEUR.MISC FREQUENTLY ASKED QUESTIONS (FAQ)

No longer available from:

* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/faq/
* http://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/

Well, it's finally happened. The long-defunct FAQ's have finally been removed from most archive sites. This important document, one which served as an excellent "Read Me First" for the readership of the amateur radio-related Usenet newsgroups, is now no longer publicly available.

Efforts are still underway to bring it back, but so far, no volunteers have stepped forward that have been able to resume its regular posting and maintenance.

As stated many times before, new editors are being actively sought to take over maintenance of the above resources and keep them from disappearing from the net permanently. As with any volunteer effort, new volunteers are often needed. We need new editors to post the above FAQ's. Preferably this should be someone who has enthusiasm for hobbyist radio, experience with Usenet, and the ability to work with the other editors. No single person can know all the various aspects of this diverse hobby, so the editorial review group is intended to

make a greater combination of experience. A new maintainer is desired at this time to provide a fresh outlook as well as the opportunity to train new volunteers and avoid overreliance on a small group of people.

The FAQ's were posted with the auto-faq software, which is written in Perl (see Paul Schleck's entry). So it would be a plus for volunteers to post the FAQ to have Perl installed on their system and be able to use "cron" or "at" so that postings can go unattended.

With widespread net acceptance and use of the World-Wide Web, it might be desirable to rewrite the FAQ as a minimal "pointer" article with URL links. Such a minimal FAQ would reduce maintenance burdens, ward off criticism of the document for being "too big," and could be maintained as Hypertext Markup Language (HTML) at a WWW site, then "dumped" to an ASCII file for posting to news (to cover users who don't use WWW, as well as to actually feed a couple of automated FTP, Gopher, and WWW sites. Such an approach is used for the Elmers list; see the companion posting to this file, "Amateur Radio: Elmers List Info and Administrivia" for more information).

Anyone who wants to make their contribution to the Net as a volunteer should contact the Elmers Directory maintainer at elmers-request@gonix.com.

(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back to the 1920's. I will be happy to assist those needing copies of out-of-copyright information for specific makes and models of receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all types. Unfortunately I have not taken the time to catalog all this information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment, (and I have the information in my collection) I will research and copy it for you. Cost will vary depending on the time required to find the information and the amount of pages to be copied. I estimate 10 pages or less at $1.00 US/page including US postage. I will quote on larger manuals.

This is NOT my career or a business. Any requests must be prepaid or I will ship COD at additional postage costs.

perens@hams.com

MAINTAINER OF LINUX FOR HAMS CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CDROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30 US.

FREE CDROM SUBSCRIPTION FOR VOLUNTEERS

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please E-mail to Perens@Rahul.net. You may be be able to get a free CDROM subscription to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

info@hams.com

[Editor's Note: This project seems to be delayed as the result of schedule slippages with the Debian version of Linux. For more information about the status of the Debian Linux System, please contact David Engel at david@ods.com.]

PHD CANDIDATE IN ADULT AND HIGHER EDUCATION

EDUCATIONAL ADVISOR, AMERICAN RADIO RELAY LEAGUE

I am primarily an adult educator conducting research in self-directed learning. I have been involved in the following activities:

* Teach licensing classes, since 1974.
* Organize clubs, Stuttgart Amateur Radio Club, Panama Canal Astronomy Club, Lawton Astronomy Club.
* Public speaking and publish on growth in volunteer organizations, marketing adult and higher education and teaching amateur radio courses.
* Research in adult learning theory, adult motivation and organizational theory.
* Conducted a SAREX activity that involve seven communities, 21 schools and 3,000 children.

I am primarily interested in assisting amateur radio clubs grow.

Tony Reeves AB6GA

tony@toners.com

Prescott, AZ

* Novice training, local VE for Novice-Tech tests
* General questions

I also operate a 24-hour landline BBS for Ham and General Interest:

+1 520 445-8472

Peter Reynolds KE4ABD

Peter Reynolds (KE4BAD) E-mail: reynolds@stc.nato.int
Voice: +31 70-314-2410 FAX: +31 70-314-2111
Senior Scientist, Radio Branch, Communications Division
SHAPE Technical Centre, PO Box 174, 2501CD The Hague,
The Netherlands CompuServe: 100276,1340

I am very lucky in that I earn my living in radio communications, so my expertise is fairly broad (but not focused on amateur techniques only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over the years. I always enjoy discussing and researching a communications problem so if you don't see it listed above drop me a line anyway, especially if you happen to be in Europe.

AMSAT-NA LIFE MEMBER #2109

I am the AMSAT coordinator for the Portland, Oregon area and I do a lot of the "Elmering" in this area as well as steering people toward others.

This would be for satellites only, as I am not doing HF anymore.

I am currently set up for all of the digital and analog satellites, all modes including AO-13 Mode S and weather sats.

I would be happy to assist people with getting started and beyond in all areas of satellite operations.

Henry Ruh KB9FO

atvq@aol.com

AMATEUR TELEVISION QUARTERLY (ATVQ) MAGAZINE

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can try to answer questions on here, and frequently do, but time is expensive and limited!

John Rymell N3PFF

ryme@husky.bloomu.edu
Bloomsburg University
Bloomsburg, PA

Over 25 years in electronic/computer service work. Enjoy designing, building and operating vacuum tube and solid state equipment. Experienced in wire antenna and tuners, SWL, and Amateur Radio. Have real enthusiasm for building just about anything from next to nothing (:^)! Glad to help those in need.

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service
their own equipment. I would like to see a turn-around here...

ARRL TECHNICAL INFORMATION SERVICE COORDINATOR (TIS@ARRL.ORG)

ARRL E-MAIL INFORMATION SERVER SYSOP (INFO@ARRL.ORG)

The ARRL Technical Information Service (TIS) is a valuable membership
benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in
one of the many books about Amateur Radio. Folks who call or write to
ARRL TIS staff are often referred to one of these books or to a past

magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

"Why don't you just make 10 louder?"
(Spinal Tap)
- ---

Having recently discovered the joys of Perl and CGI on the WWW, I decided to get into the swing of it by coding a WWW page where one can take practice Amateur Radio Exams. The page is now complete and has all five examinations along with figures (including Extra).

The results are displayed question-by-question and then broken down by subelement so that you can see which areas need extra study.

I am also saving the results from each examination taken so that one can get some idea of the relative success rate for each Exam and subelement. This may provide some interesting information as time goes by.

The page can be found at:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

I _think_ it should all work as expected but I welcome any reports of bugs and/or suggestions!

I hope this is of use to people interested in upgrading.

PS: If the page is slow, or not to your liking, try Ham Exam at:

http://w5ac.tamu.edu/ham-exam.html

==========
This message does not constitute any official or unofficial statement or policy of American Turnkey or any other organization, corporation or institution.

I just upgraded to Advanced, and am now working on Extra. Was first licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when the baby is asleep, so the XYL demands silent running. Besides, with my wimpy wire, there is little point in trying to run voice.

Jim Walsh W7LVN

jwalsh@efn.org

Quarter Century Wireless Association, Inc. (QCWA), headquartered in Eugene, OR, is pleased to announce the QCWA World-Wide Web Home Page, available by either text or graphics browser at:

http://www.efn.org/~qcwa/

Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to any radio amateur licensed today AND also licensed 25 years or more ago (there is NO REQUIREMENT for continuous licensing over this time period -- if you received your first ham license on or before January 1, 1970, you're now eligible). Included on the Web page are:

* Photos, biographies, addresses and phone numbers of QCWA 1995-1996 Officers and Directors
* Database of local Chapters (nearly 200, worldwide), including name, address, and callsign of Chapter Secretary
* Listing of on-the-air Chapter meetings
* Details of upcoming National Convention -- with photos, as soon as we receive them
* A few words about the quarterly QCWA Journal (we hope soon to have excerpts from Editor Barry Wiseman's new, improved Journal available to you on the Web)
* Rules and schedule for QCWA Phone and CW QSO Parties
* QCWA Memorial Scholarship Program
* Criteria for and recent winners of QCWA Awards
* A Photo Tour of QCWA Headquarters and W2MM/7 memorial station (soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
* Links to other interesting ham-related Web sites

Please visit QCWA on the Web . . . and take a moment to E-mail me with your comments, corrections, and suggestions at my E-mail address above. If you administer a ham-related Web site, QCWA would appreciate a Link from your page. We're 12,000-strong -- worldwide -- and growing! Come join us!

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT NEWS SERVICE

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the

packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT BULLETIN BOARD

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - KEPLERIAN ELEMENTS MAILING LIST

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA RELATED INFORMATION MAILING LIST

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - SHUTTLE AMATEUR RADIO EXPERIMENT MAILING LIST

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

Conway Yee N2JWQ

yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

MAINTAINER OF THE UNIVERSAL AND FREE LISTING OF REPEATERS FOR RADIO AMATEURS

This listing with all the data is available for anonymous FTP from:

ftp://mipgsun.mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my
intent is to make sure it stays that way. For this reason, I have
applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is
not limited to the US. This reflects the intent to make this directory
universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via E-mail to yee@mipg.upenn.edu

The data format has not been changed from the old format so
contributions that you were planning to make (prior to my recent
troubles) are still current and most welcome. This repeater listing
will be of use if people take an active part in making it accurate and
useful.

- - Richard Hieber DL8MFQ, AA8CP
- -
- - sz0026@daphne.rrze.uni-erlangen.de
- - AX.25: DL8MFQ@DB0SIF.DEU.EU
- -
- - Areas of expertise:
- -
- - * QRP work
- - * mobile operation
- - * computers (DOS, OS/2, Linux)
- - * Packet Radio
- - * wire antennas
- -
- - I am an EE student at the University of Erlangen-Nuernberg, Germany. I
- - am active in the university ham radio club (IG-Funk), spending time
- - and thoughts in improving the permanent club display in the lecture
- - hall building. So I have some first hand experience in making
- - printouts and display arrangements visually appealing.
- -
- - My main interests are shortwave, especially QRP, and computers (Packet
- - Radio, Internet). I have some experience in shortwave mobiling and
- - considerable success with a modified citizens band whip on the bands
- - from 10 to 20 meters. Generally I am fascinated with simple yet
- - effective equipment, hence my obsession with QRP. I like wire
- - antennas. I feel that over the course of time I will more and more
- - learn to appreciate old ham radio equipment (boatanchors) and get more
- - into homebrewing.
- -
- - I've compiled a list of QRP Clubs worldwide and a FAQ file for the
- - QRP-L mailing list. They are available from the QRP-L WWW Pages at:
- -
- - * http://ncc1701-d.cc.nd.edu/qrp-l/index.html
- - * http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1,
- - 1995)
- -
- - The QRP-L mailing list is intended to be a relatively noise-free

- - environment for discussion of any subjects relating to low-power
- - amateur radio operation. Example topics: portable operation, equipment
- - design and construction, solar and battery power, QRPp, contesting,
- - kit building.
- - --

- --- 2896,2945 ----

Lyndon Nerenberg VE7TCP, VE6BBM

! lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet,
as well as system administration of UNIX and UNIX-like operating
! systems (with an emphasis on networking, E-mail, etc.). My current
! concentration is on writing UNIX based tools (e.g. software for
! logging, antenna design, propagation analysis) that can be shared
! throughout the ham community. I also maintain the ve7tcp.ampr.org
! server. This system hosts a variety of ham-radio related mailing lists
! as well as a comprehensive World-Wide Web site and FTP archive, and
! was one of the first Internet servers dedicated to ham radio. The
! system is also a hub site for the ampr.* newsgroups. Information on
! the mailing lists offered can be had by sending an e-mail message to:
!
! listserv@ve7tcp.ampr.org
!
! containing (only) the word:
!
! INFO
!
! in the message body. The WWW server is located at the URL:
!
! http://ve7tcp.ampr.org/
!
! and the FTP server resides at:
!
! ftp://ve7tcp.ampr.org/
!
! Direct login access to the system is available to anyone holding a
! currently valid amateur radio license. The server provides a number of
! useful tools for the radio amateur, including satellite tracking
! software, CAD design software, SPICE, and other tools not generally
! available to people running on Microsoft Windows or Apple based PC's.
! (It runs 4.4BSD UNIX.) To obtain a login on the server, send a
! photocopy of your current amateur license, along with a SAE and IRC
! to:
!
! Lyndon Nerenberg
! 1804 Juniper Street
! Prince George, British Columbia
! Canada V2L 1N7

!
! Your login and password information will be mailed to the address
! listed on your license.

STATE FREQUENCY COORDINATOR, TEXAS VHF-FM SOCIETY

(We do the repeater coordinating in Texas.)

I have done HF, Satellites, VHF/UHF, and been in amateur radio for 10
years. I don't know it all, but through my contacts I can find someone
that can usually answer most of the questions.

I also know of several other coordinators in the US and have contacts
through the ARRL and a BBS.

Brian Gilhuly VE3BGB

Brian Gilhuly VE3BGB Author of KENTROL, the ultimate in
rig control/logging/memory mgmt software
brian@synapse.net for Kenwood HF rigs and MS Windows
CompuServe: 73257,3131
Tel/fax: +1 613 623-9735 Kentrol Web Page:
http://www.synapse.net/~kentrol/
76 McDonald Street S Kentrol FTP Site:
Arnprior ON K7S 2W5 Canada ftp://ftp.synapse.net/private/k/kentrol/

Kentrol is a Windows 3x control program for Kenwood HF transceivers
and the R-5000 receiver, which has built-in logging and memory-
management capabilities. Since its introduction in 1991, Kentrol has
set the standard for Windows-based rig automation, and new features
continue to be added regularly. SkedMan is an automated sked manager
for Kentrol. Enter schedule data, set alarms, and when an alarm goes
off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them, you
are most welcome to do so.

Eran Glago KD6KVO
~~~~~~

glago@aol.com

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section of California.

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't participate on most HF NTS traffic nets have a real role to play here, as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, public service is a good way to break out of that mold and get more fun from radio while really helping out.

JPS COMMUNICATIONS, INC.

For those interested, JPS Communications, makers of DSP noise filters
and other radio-related products, has a page on the WWW. The URL is:

http://emporium.turnpike.net/J/JPS/jps.html

Also, I'm in the process of collecting links to pages relating to uses
of DSP in amateur radio. If you know of some, I'd appreciate hearing
about them. There are a lot of people experimenting with new
modulation schemes, voice compression, noise reduction, DSP IF
techniques, and lots of other interesting applications. I'm planning
to add a page with links to this information, so keep an eye out for
it, and if you have something to share, please drop me a line.

Lance Halle KC7FVX

lanceh@crl.com

I will be glad to field questions in the following areas:

DFing
Local interference committee chairman

OO questions
Phoenix area Official Observer Coordinator

BSA Merit badge
Advisor of Ham Radio Explorer Post

Just let me know what all you need and I'll do what I can.

News of local enforcement actions and FCC Notices of Apparent
Liability (NAL) may be found on the WWW page of the Arizona Repeater
Association (of which I am a member):

http://www.indirect.com/www/ara/

Brian Hammill KD4BFJ

ARRL LABORATORY ENGINEER

* Radio Frequency Interference (RFI) matters
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington

CT 06111. This package is a reprint of an article I wrote for
Communications Technology -- the Journal of the Society of Cable
Television Engineers. We submitted it to "their" journal because we
felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me
here at HQ. I can usually get back to you within a few days to offer
some additional help.

Many amateur radio informational documents (including EMI/RFI files)
are also available from the ARRL info server. Send E-mail to
info@arrl.org with the word "HELP" in the message body.

See Cheyenne Greatorex's entry for information about the ARRL
Anonymous FTP Archive and David Newkirk's entry for information about
the ARRL World-Wide Web Home Page.

* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list,
with the blessings of Paul Prescott, N1AAC, who took over from Our
Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over
the rec.radio.amateur.* Working Group mail list, formerly maintained
by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to
homebrewing tube transmitters and receivers ("Glowbugs," a sort of
intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@ThePorch.com (*)
* rra-wg@ThePorch.com
* glowbugs@ThePorch.com

Use these addresses for messages of general interest to the entire
group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

ListProc@ThePorch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

ListOwn@jackatak.ThePorch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://www.qualcomm.com/people/pkarn/

HIGH-PERFORMANCE SOFTWARE MODEM PROJECT

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://www.qualcomm.com/people/pkarn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

[Editor's Note: I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "PACKET AND DIGITAL NETWORKING" category in the Subject Quick-Search Index for a complete list.]

Paul Keezer NX1P

logview@keez.tiac.net

Finally a WWW page has been set up for HamView products, a Windows based Ham Radio program. This page can now be located at:

http://www.tiac.net/users/pkeezer/hamview/

There is an upgrade file right now for Win95, but the bug has only been corrected in Logview 5.0. Come and check us out.

Raleigh, NC 27695-7620

rdkeys@csemail.cropsci.ncsu.edu

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing your way to hamdom, the cheapskate's approach, let me know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS FRIDAY NIGHT FIST FUNCTION

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq:
80 meters --- 3702.5 khz for all hands.
40 meters --- 7102.5 khz alternate, for all hands
(between the heterodynes, someone scout out a better QRG)

Standard calling signal:
CWIST IMI DE <yourcall> K (if there are no control stations calling for you to check in), or, CWIST DE <yourcall> K (if there is a control station inviting checkins) (The alternative check in for those OTs with salt behind the ears is a simple DE to get the control station's ears followed by DE <yourcall> K when the control station acknowledges.)

Note:
A simple informal net style protocol will generally be used, unless no control station assumes control for the evening, in which case it is an open roundtable format discussion group.

Note:
The midnight local time gathering is designed to maximize the number of checkins spread out over the world, so less confusion and more checkins are heard. The hope is that someone will be aboard almost anywhere and be heard at least locally, anywhere in the world.

Definition:
A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of

radiotelegraphy, and the refining and developing of the
technology of radiotelegraphy.

AUTHOR OF NA4G'S NATIONAL ELECTRICAL CODE FOR HAMS

ABSTRACT

This work was presented as a talk to the Homebrew Special
Interest Group (HB-SIG) of the Raleigh Amateur Radio Society
(RARS), on 15 January, 1991 and was revised for another
presentation on 26 January, 1994.

This document contains excerpts of the National Electrical
Code (NFPA 70-1990) that, in the author's opinion, apply to
the installation of amateur radio equipment as would
commonly be found in most amateur radio stations. Direct
excerpts from the Code are contained within inset
quotations. Paraphrased excerpts from the Code are
itemized. The author's interpretation and discussion of the
Code is set full-width. The author's interpretation and
discussion of various sections of the Code is not meant to
be all-encompassing, nor the official interpretation of the
National Fire Protection Association, nor of any official
governing body having legal authority of jurisdiction over
electrical installations, but is meant to be used as a
teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one'
both in tar-compress (862K, for Unix jocks) and PKZIP 2.04g (732K, for
MS-DOS users) formats. Both are available from:

ftp://sunsite.unc.edu/pub/academic/agriculture/agronomy/ham/things-to-
build/na4g/

AUTHOR OF THE QRZ! HAM RADIO CDROM

I am interested in receiving amateur-radio-related public-domain
and/or shareware programs, data bfiles, frequency lists, etc., that
would make a useful edition to the QRZ! CDROM. Can help arrange volume
discounts for clubs and groups, and will donate copies of QRZ! to
qualifying non-profit organizations. Send E-mail or call +1 602
483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours
a day. Our connection is via a T1 line so you should get pretty decent
file transfer times.

We've got about 7,000 files online, including radio mods, software,
most everything imaginable. We are also accepting uploads of all ham
radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a
Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are
invited to contribute their materials to the QRZ! anonymous ftp server
above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Luther M. Lord N4DA

n4da@mindspring.com

If you need a good place to get your amateur radio repaired, I can help. Visit the Radio Doctor's home page at:

http://www.mindspring.com/~n4da/top.html

I will answer all technical questions received via E-Mail at my address above. This service is offered presently at no charge.

INFORMATION ABOUT FOREIGNERS OPERATING IN JAPAN

- M -

Dean R. Madsen KE0WO

Dean R Madsen, KE0WO Computer Science Major
Internet: dmadsen@iastate.edu Iowa State University
ke0wo@iastate.edu Ames, Iowa
AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called elmers@iastate.edu we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

Fred O. Maia W5YI

3511297@mcimail.com

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse code training products are also available from every Radio Shack nationwide. Color photograghs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

Will Marchant KC6ROL

Can anyone give me some information on a Standard UHF commercial radio model number GX-3000? I have a friend who acquired one and is interested in getting it up on amateur freqs. Any info would help.

Thanks and 73--
Ken

"Pat Wilson" <pw@i2020.net> wrote:

>Why do you idiots insist on spamming every group with this crap. Just
>answer in the appropiate group.

Pat, I've seen a lot of messages like yours, both posted in the
newsgroups and via private email. Somebody needs to elaborate
and articulate what you are saying just a wee bit. Maybe you
are just the guy who can do it......

Please tell these guys which AMATEUR newsgroup is the appropriate
group for discussions of WWII, agent orange, chemical warfare, and
nuclear bombs. I'm sure if they knew where to move to, they would go.
They're probably as confused as I am about this 'SPAM' stuff. Where I
live, and where Jeff lives, SPAM is something you eat, not something
you do. I am starting to think that internet has it's own 'kiddie
language' like ham radio does, HI HI HI. Why internet users have not
discoverd big people words like 'cross posting' is beyond me. FLAME
ME, YOU SPAMMER !! Who invented the official language of internet,
Bevis and Butthead ?

Maybe the i.couldnt.make.the.highschool.debating.team newsgroup would
be the right one for this discussion ?

I don't think you've been reading much of what you are complaining
about. The debatees in this discussion are not 'idiots' as you call
them, they are very obviously expert debaters and have a lot of facts,
and are having a very intense discussion. Judging from the time and
effort they have spent debating the issue, I don't imagine that what
you call 'crap' is crap to them. I'm not much interested in what they
are talking about, so I just skip the 'THREAD' (another Bevis and
Butthead term) and don't loose much sleep because other people
want to discuss it.

They just seem to lack a proper place for their debate.

And a considerable number of people, including me, seem to lack the
basic information on whatgoeswhere. Notice any OPDX bulletins in more

than one newsgroup ? Notice any CW discussions in the .MISC group ?
(Somebody told me CW belongs in the .POLICY group). Why are
there 'Anybody Use Clover' messages in .MISC instead of the DIGITAL
groups ? I don't know. And apparantly, a lot of other people don't
know either.

Why do you and people like you *assume* that everyone using the
amateur newsgroups is an experienced internet user ? I saw a message

yesterday from someone who is apparantly a new ham asking for help with a ten meter dipole. A lot of people responded trying to help him out. Should we just *assume* that he is an experienced ham and call him an idiot too ?

So instead of calling people 'idiots', and since you seem to know whatgoeswhere, why not share that information with the rest of us ? I know. Read the FAQ. What the faq is a FAQ ? Where the faq is a FAQ ? Who the faq is hiding the FAQ from all the inexperienced users in the amateur newsgroups ? Most of us didn't go to internet school. I just called somebody on the phone, whipped my Gold Card number on them and POOF ! - I'm on internet.

I am sure all of us would like to see a newsgroup called

only.what.I.want.to.read

but it doesn't look like that is going to happen any time soon, so if you can't educate us, then I guess you'll have to resign yourself to the fact that you'll just have to wade thru the muck with the rest of us. Or, I have heard about something called a MODERATED news group. It's a group where one person decides what everyone else wants to read, and cans what they don't. Since I sure all of us hams are interested in the same thing, and if a message appeared that one of us didn't want to read then all of us wouldn't want to read it, why don't you start a moderated amateur newsgroup, you be the moderator, and then everything that appears in that newsgroup will be just the kinda stuff you like to read.

But if you don't have time, Pat, we'll understand. It's much less time consuming to write one liners calling people idiots than it is to sit down and write something constructive.

73, Jim KH2D

From: efk0490@best.com
Message-ID: <31D9EB7D.1D96@best.com>
Source record: 221700

For those who haven't found it yet, an interesting WWW site offering HP propagation forecasts can be found at http://sel.noaa.gov/index.html

When you get the homepage, select the gopher server button, select the "Latest Solar-Geophysical Data" folder, and select the "USAF High Frequency Radio Propagation Report" file. There's a section at the bottom of the file to permit decoding the condition report.

There's a lot of interesting stuff at this site, especially through the gopher server. Another interesting link is to the North Western Research RF Scintillation forecast...may be useful to the satellite and meteor scatter community.

Explore and enjoy!

4721. Microprocessor reset on Chrysler broadcast radio

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-02 00:00:00 UTC
From: Dwight Williams <dwight.williams@sait.ab.ca>
Message-ID: <1996Jul2.113405.879@cgate.sait.ab.ca>
Source record: 221701

I have a Chrysler Infinity AM/FM cassette broadcast band radio
in my Dodge Caravan that's stepping 9KHz on the AM band
instead of the normal 10KHz.

Anyone have any ideas on how the reset/reprogram the
microprocessor on this? It's probably some mystic sequence
involving three controls and four fingers, but I haven't been
able to figure it out......

Thanks, Dwight VE6PK dwight.williams@sait.ab.ca

Not really. Once a link is established, it holds very well against
interference. Since modes like Clover have a very closely controlled
occupied spectrum, stations can operate on 500 Hz centers without
mutual interference. When a rogue does come on, the protocol patiently
continues to operate, retrying when the rogue does manage to clobber
one of the FEC protected frames.

Packet is a different can of worms. Because it doesn't offer robust
error correction, and uses a go back N recovery algorithm, it suffers
greatly from interference. Note, however, that 30 baud is still 45 WPM.
My high school typing class had a minimum passing speed of 60 WPM.
30 WPM typing is definitely in the hunt and peck category.

All radios will be portable, with built in rubber duckie no-gain antennas.
Max power output
will be 500 mw, and max deviation will be 2.5 Khz. There is no such thing
as base stations
in the new Family Radio Service. It was intended for people such as
families who are outdoors
at events such as parades, swap meets, fairs, etc to keep in touch with
each other over short
distances.

False. Typical Radio Shack answer. The other UHF radio that Radio Shack
sells is on the Interant (SP?) channels. They are required to be
licensed, however many people buy them and never bother with a license.

The max power output for the new FRS is 500 mw with unity gain built in
antennas, and portable
operation only. Maximum devation is 2.5 Khz.

My understanding is that step size is the least of your problems with a modified FT-530 in the 800+ bands. I am told that in the U.S. versions anyway there is no electronics covering those bands. At least, that help explains why I have never heard even static when tuned there. Let me know if you find a solution.

This is NOT true. Bill Gates and Craig McCaw were founding investors in a
company called Teledesic. Teledesic is getting allocations at 28 GHZ for high
speed satellite data access (digital voice, video, internet data, whatever -
its all bits). They have no involvement that I am aware of in LOW earth orbit
(LEO) satellites for 2-way short messaging of the type that the LEO providers
wish to offer.

I am an employee of Microsoft Corporation and the above statements represent my
personal opinion and are not necessarily those of my employer. Besides who else
would ever accept credit for my silly opinions?

This is NOT true. Bill Gates and Craig McCaw were founding investors in a
company called Teledesic. Teledesic is getting allocations at 28 GHZ for high
speed satellite data access (digital voice, video, internet data, whatever -
its all bits). They have no involvement that I am aware of in LOW earth orbit
(LEO) satellites for 2-way short messaging of the type that the LEO providers
wish to offer.

I am an employee of Microsoft Corporation and the above statements represent my
personal opinion and are not necessarily those of my employer. Besides who else
would ever accept credit for my silly opinions?

> suspected of posting "flame bait".

No, I was merely suggesting that your position was so outlandish as
to be in the category of flame bait. You really can't believe that 2 meters
and 70 cm is so devoid of use that 10 meters could handle it? Have you
ever operated 10 meters at the peak of a solar cycle? Does the
expression "Worked the world on a wet noodle" ring any bells? Right
now at the bottom of the cycle, perhaps 10 meters could offer a lousy
substitute for pieces of our VHF/UHF allocations, but at the peak of
the cycle it would be a complete and utter joke.

Please feel free to disregard my post, but again, your position that a
1.7 MHz allocation on 10 meters could even partially substitute for
34 MHz of VHF/UHF allocations is absurd at best, flame bait at worst.
Please substantiate such a ridiculous claim. And please try to remember
that VHF/UHF usage in your area may not reflect the rest of the country.

This has yet to be verified by anyone that might truly know.

>flashing lights

Reading CW via lights is not neccisarily an easy transition
for anyone that can copy CW via audio. In fact, if the navy
is still using CW via light, the people that do it are not
Radiomen, but rather they are Signalmen.

>and third>world.

That's a choice made by those countries. It should
not be mandated on US hams because one or more
other countries still use CW.

>I imagine that there is a reason that many 3rd world military
>must use morse; they can't afford the more expensive digital toys.

The bottom line is that the military operations of those
countries does not require US hams to be CW knowledgable
because of it.

>Amateur operators in those countries are no richer than their
>militaries.

Once again, it is not an obligation, nor should it be, for every
US ham to be able to communicate with those hams. If the
hams in those countries can only aford CW (a point I would
suggest is not born out by actuality) then they'll have plenty
of US hams to contact anyway, if only for the rare DX
appeal.

>In spite of the many arguments that can be manufactured on
>this subject, equipment that operates with Morse can consructed very
>cheaply, and yes, 8086 based computers *are* expensive and not always
>easily available in some parts of the world. That alone makes digital
>expensive. Thus your above paragraph, although it lends credence to
>dropping Morse because of technological advances, also reinforces the

>>day.

>This is just an opinion which I do not happen to think accurately
>reflects the motives of the pro-code people. You may wish to give us
>more credit than that, but then again, you may not.

Well the CW saves the day theme has been retold many
times dispite no current examples of it showing up. The
extremist osition is along the lines of..if forcing everyone to
learn CW to gain HF access saves evepn one life it is worth it.
That is not a viable economic model...and yes, safety is an
economically modeled consideration in all aspects
of our lives.

>> Those visions are of the past, WWI and WWII. The world is different now. It moves
faster.
>> Code was of a slower age.

>"Voice" is not that much further ahead. Anybody know what year the

Dear Gary,

Check out the article on the "Steath" antenna reviewed in this month's
CQ Magazine. I wouldn't say it's indestructable, but it's the best so
far.

Maybe we should talk them into getting Hans Evers, PA0CX, to do their
covers. His witty and wonderful cartoons that appeared on the covers of
so many issues of HAM RADIO magazine were among the best I've ever seen.

:>I have the Sam's callsign database on my harddrive. I would like to
:>print the calls I look up on to an envelope. I'm using a HP deskjet
:>600C. Has anyone been able to do this?

:> KE4QMP, Lee Way

Hey Lee, you need the Sam Users Guide. Send a request to RT Systems and ask for the user's guide. In it you will find a section on "SAM Format for Export (SFX) Files". In the options screen, (F9) there is a field called "Print Format File" sam reads this file and the control characters in it so it will know how to output the data. They (files with a SFX extenion) are ASCII files and you can edit them with an editor to make the data come out the way you want.

All you have to do is make up a file with the proper control codes in it and name is somthing like envelope.sfx. Then go to the options screen, (F9) and put the name of the file in the "Print Format" field. Sam will output the data in this format and print it on the envelope. It takes a few tries to get the right number of [NL] 'New Lines" and so forth but it works pretty good. Hope this helps.

I think it is very important that one not stick a label on "americans"
or "germans" because of acts of their governments in the past, or
perceptions of the present state of mind as a whole. By not
corresponding with people from the country in question, you may never
find your view challenged, because you admit no more evidence.

HAVE AN OPEN MIND!

Lack of an open mind is stifling ham radio!

From: dirk_yohn@miu4.k12.pa.us
Message-ID: <4rbku5$s8e@saturn.exodus.net>
Source record: 221778

Dear radio enthusiast:

This summer I picked up a ZETEL smart-patch during a local hamfest. The gentleman selling the unit connected it on the spot to a gel-cell battery to confirm that the logic circuits of the unit operated, and as far as I can diagnose, the radio accepts all functions normally and displays the correct sequence of lights. The problem is that I cannot get the unit to key up my radio (An HTX-202) when the patch is put into use. I can manually press the PTT button and HEAR the phone audio going through, but it does not activate the transmit circuit on the radio. An aquainteance of mine who deals in electronics equipement suggested that in all probability, a switching transistor is not functioning on the vox circuit of the unit.

I have written to a number of local hams, but the only response I get from everyone is "Too busy", "Dont know about patches" or something along those lines. Yet SOMEONE connected one to our local repeater - Go figure. Anyways... I need this thing serviced or would like information from anyone selling an autopatch that does not have to directly interface with the radios electronics (This unit plugs into the EAR and MIC jacks, utilizing VOX circuitry.)

If you can provide me with ANY assistance AT ALL ... I am willing to either pay money, or trade a COMPLETE computer system, for it's repair, or a device similar to this one. I have the manual, which includes a schematic and a complete parts list with all of the values.

Please contact me via one of the following meathods if interested:

4756. GB2RS News 30th June 1996 (repost)

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-02 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <836354524snx@llondel.demon.co.uk>
Source record: 221779
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 30th of June and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

A new propagation beacon, GB3REB, is due to start operation on 70.010MHz on Monday the 1st of July. The beacon is located at Chatham in Kent, and for further details please contact the beacon keeper, D M Ferigan, G3ZYV, whose address is correct in the RSGB Call Book.

The 1996 AMSAT-UK Colloquium takes place between the 25th and 28th of July at the University of Surrey in Guildford. Admission is by ticket only, so for further details and a booking form, please send a large SASE to Ron Broadbent MBE, G3AAJ, whose address is correct in the RSGB Call Book.

The RSGB has commissioned an Opinion Survey on the Future of Amateur Radio and members will have received their copy with the July RadCom. The survey is open to anyone, whether or not they are a member of the RSGB, so if you would like to receive a survey form, write to "Survey Request", RSGB Headquarters, Lambda House, Cranborne Road, Potters Bar, Hertfordshire, EN6 3JE. Please enclose a large self-addressed stamped envelope. Please note that the completed forms must be returned by the 29th of July.

To celebrate the 40th anniversary of the Stevenage and District Amateur Radio Society, the club is issuing a certificate to anyone who collects 40 'points' between March and November. Each contact with a club member is worth two points, and a contact with any of the club stations G3SAD, GX3SAD, G8SAD, GX8SAD or GB4SAD counts 10 points. For the full rules and an up-to-date members' list, send an SASE to Mark Meldrum, G7SQU, whose address is correct in the RSGB Call Book.

Because of continuing difficulties with interference, the 0900, 80 metre GB2RS broadcast from G4ARZ will move to 3640kHz next week - today's broadcast is the last one on 3650kHz.

Now some items of HF DX news from the weekly RSGB DX News Sheet, edited by Chris Page, G4BUE:

From the Marshall Islands - V73 - N8CC and K8AQM plan activity from Monday the 1st of July until Thursday the 4th of July. They then go on to Micronesia, where they plan activity as V63CF and V63CK from the island of Ponape from the 4th to the 7th of July.

From Usedom Island, which counts as EU-129 for the RSGB IOTA Awards, SP5PB is signing "SP5PB Stroke 1" from now until Saturday the 6th of

July, on all bands CW and SSB.

And from the Turks and Caicos Islands, K8JP is now signing VP5/K8JP until Monday the 1st of July.

Now news of some special event stations:

GB2DHH is on the air from the Mosquito Aircraft Museum at London Colney near St Albans this weekend, the 29th and 30th of June. The last flying DH98 Mosquito aircraft will display over the museum from 12 noon.

On Monday the 1st of July, GB0SHC will be operating from the Somme Heritage Centre, near Newtonards in Northern Ireland, from 7.30am to 5.00pm. The event commemorates the 80th anniversary of the Battle of the Somme.

GB0SPR will be on the air from the 5th to the 7th of July from the Crusaders' "Spree '96" camp at Danbury, near Chelmsford in Essex. The Crusaders is a registered charity which provides activity camping weekends for children and young people.

Next Saturday, the 6th of July, GB0DBC will be on the air from Deerbolt, Barnard Castle, in County Durham. The event commemorates the dedication of an RAF memorial to the airmen and women who have given their lives and have no known graves.

And GB4AFS will also be active on the 6th of July during 21 Signal Regiment, Air Support's Open Day at Colerne Airfield in Wiltshire.

Next the Rally News:

The "Ham Radio 96" exhibition is taking place in Friedrichshafen, Germany, this weekend, from Friday the 28th to Sunday the 30th of June. This is Europe's largest amateur radio show, and the RSGB is there with a bookstall and membership information stand.

The Longleat Amateur Radio and Electronics Fair takes place today, the 30th of June. This event, in the grounds of Longleat House near Warminster in Wiltshire, features six large marquees with traders, and an RSGB bookstall and membership information stand.

On Saturday, the 6th of July, the Air Formation Signal Regiments Association will be holding an Open Day at Colerne Airfield in Wiltshire. The event starts at 10.00am and features a car boot sale. For details call 01225 743240, extension 5271.

The Southend and District Radio Society will be holding a radio and computer boot sale at its club headquarters at the Druid Scout Centre in Eastern Avenue, Southend, next Sunday, the 7th of July. Talk-in will be on 2 metres channel S22 and further details can be obtained from Ron, G0UAW, on 01702 304439.

The York Radio Rally also takes place next Sunday, the 7th, in the Tattersall Building at York Racecourse. The event features amateur

radio, electronics and computer equipment. Talk-in will be on 2 metres channel S22 and for further details ring 01904 426421.

The three Reading repeaters, GB3RD on 2 metres, GB3BK on 70 centimetres, and GB3RU on 23 centimetres, closed down temporarily last Sunday, the 23rd. The site has been sold and it is no longer possible to keep the repeaters there. A new site has been found and it is hoped that the repeaters will be off the air for the minimum time possible. Any inconvenience to users is regretted and further details can be obtained from the repeater keeper, Andrew Barrett, G8DOR. His address is 7 Laceys Drive, Hazlemere, High Wycombe, Buckinghamshire. The post code is HP15 7JY. Please note that G8DOR's address is not correct in the RSGB Call Book.

Now for the HF contest news:

We know of no HF contests this weekend. Next weekend, the Venezuelan Independence Day contest takes place for 48 hours on the 6th and 7th of July and brief rules are on page 23 of the July RadCom.

Next some VHF contest news:

The second of six sessions in the RSGB 10 Gigahertz Cumulative Contest is taking place today, Sunday the 30th of June, from 0900 to 2100 UTC. The rules can be found in the March 96 RadCom.

The Worked All Britain 144MHz QRP phone contest also takes place today, the 30th, between 09 and 1800 UTC. There are sections for fixed, portable, mobile and SWLs.

Next weekend, a major event in the RSGB VHF Contest Calendar takes place - VHF Field Day. The contest runs for 24 hours from 1400 UTC on Saturday the 6th of July. Groups actually competing must have already registered, but look for plenty of activity on the 70, 144, 432 and 1296MHz bands. The rules can be found on page 13 of the 1996 Contesting Guide, which was published in the September 1995 RadCom.

And the 3rd 144MHz Backpackers contest takes place next Sunday, the 7th of July, from 1100 to 1500 UTC. The rules are also in the September 1995 RadCom.

And now the solar factual data for the period from the 17th to the 23rd of June, compiled by Neil Clarke, G0CAS:

Solar flux levels increased slightly from 67 units on the 17th, peaked at 70, and averaged 69 units. The 90-day solar flux average on the 23rd was 69 units, one unit down on the previous week. X-Ray flux levels increased very slightly and peaked at A1.3 units on the 19th with an average of A1.1 units. Geomagnetic activity was mostly "quiet" and averaged Ap 6 units. The 23rd was down to Ap 3 units, while during the morning of the 19th a sudden impulse occurred, which increased the Ap index to 12 for that day.

Now the solar wind data for the period from the 10th to the 16th of June. Velocities averaged 330 kilometres per second but increased to 420 kilometres per second on the 16th. Particle densities averaged 10 particles per cubic centimetre. Bz hovered around zero for most of the period. Bartel's rotation number 2225 starts on the 5th of July.

Now the ionospheric data for Central France for the period from the 14th to the 20th of June. The F2 daytime critical frequencies averaged 6.5MHz and the darkness hour lows averaged 3.1MHz. The daytime highs took place between 2000 and 2100 hours every day and the darkness hour lows between 0200 and 0400 hours. 17 hours of blanketing E was reported by Meudon over the period.

And lastly the solar forecast. This week the slightly more active side of the sun is expected to be looking our way, but even so, solar activity is expected to continue at very low levels. Solar flux levels are expected to be into the low 70s. Geomagnetic activity is expected to be at "quiet to unsettled" levels all week. Ionospheric MUFs are expected to be about 19MHz for the south and 16MHz for the north. Darkness hour lows are expected to be about 12MHz. Sporadic E propagation is expected on the upper HF bands and on 50MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa Foxtrot and M1 Alfa Bravo series, and Novice calls in the 2 0 Alfa Oscar and 2 1 Foxtrot Bravo series.

Sounds to me like a perfect candidate to work 440Mhz with 100 mW. Line of
sight. :-)

Notes
=====

The distances were calculated using the International Ellipsoid of
1924 (polar radius 6356.912 km, equatorial radius 6378.388 km). Details
of the calculation method are available on request.

Station positions were taken from the best available information,
in the following order of preference:

1. Exact latitude and longitude where known
2. Locator sub-square center if given
3. Approximate latitude and longitude from geographical location.
4. Distance as claimed by the QSO participants.

Calculated distances may change if better information on station location becomes available.

I would like to extend the table to include the best five QSOs for each band and propagation mode, instead of just the top one as at present.

If you have any information on a possible record or exceptionally long distance QSO please send it to the IARU Region 1 VHF/UHF/Microwave DX record co-ordinator:

John Morris, GM4ANB,
35 Main Street, Hillend, By Dunfermline, Fife, KY11 5ND, UK.

I called the FCC today and they said there was a problem with their
computer which had delayed the mailing of licenses. I also checked
the database and saw my new call being effective as of June 18th.

I am selling my ultra small compact FT-10r/A16D

I am selling a Yaesu FT-10/A16D for $200. It was Purchased in late December (12/23/95) (I have not used it in 4 months because I purchased another radio)

{packaged and ready to go}

from HRO I paid:

FT-10/A16D Yaesu 2.5W 16 Keypad 99 Ch. 2 Meter Handheld
269.95

KD4-146-HQ LARSE Helical Wound Quarter-Wave
19.00

SMA TO BNC antenna adapter for the radio
8.00

Detailed specs can be found in Yaesu Web page:

http://www.yaesu.com/ft-10.html

Text version of this web page is appended.

Date: 1996-07-02 00:00:00 UTC
From: n1ist@netcom.com
Message-ID: <n1istDtx7z2.JK@netcom.com>
Source record: 221789

In article <4r33nb$fur@bolivia.it.earthlink.net> rogerjb@earthlink.net (Roger J. Buffington) writes:
-In <n1istDtoxEy.G9w@netcom.com>, n1ist@netcom.com (Michael L. Ardai) writes:
-(Referring to the scheduled W1AW broadcasts)
->Isn't it published in every QST, the handbook, Now You're Talking, and
->many other ham books??? While I agree they should listen, it's not like
->it is a surprise when the bulletins are scheduled...
-Beats me if it is or not; I don't pay attention. Since your post indicates
-that you are not sure either, I think the point is made: most amateurs don't
-know and don't care when W1AW broadcasts. It is the duty of W1AW to listen
-to determine if a frequency is clear; it is **not** the duty of the individual
-ham to read QST or "Now You're Talking" and memorize W1AW's broadcast
-schedule.

Nope. That was a rhetorical question; I know where some of the w1aw bulletins are for the bands I operate. OTOH, if I would get clobbered by w1aw, I'll just move. Their bulletins and CW practice are more useful to the many listeners than my one contact...

Also, note question and G2B02 from the General exam:

G2B02 (A)
If a net is about to begin on a frequency which you and another station are using, what should you do?
A. As a courtesy to the net, move to a different frequency

That's because it is much easier to move one QSO than a net (or bulletin) that thousands are looking for. Also, it apparantly is very difficult to QSY the W1AW TX's. As I pointed out, their schedule is very well publicised, so it is the polite thing to do to QSY before bulletin time.

And yes, I know about G2B01:

G2B01 (D)
If you are the net control station of a daily HF net, what should you do if the frequency on which you normally meet is in use just before the net begins?
D. Conduct the net on a frequency 3 to 5 kHz away from the regular net frequency

In an ideal world, that would be the best, but don't forget, even that would not solve every problem; it's quite possible that propagation would prevent w1aw from hearing every QSO on a frequency that could get stepped on; hell it has happened to me that I get on an empty frequency, get no response from QRL? and get yelled at from the half of the QSO that I can hear. Also, is it really necessary to have everyone chase w1aw all around

the band as they wander around to avoid QSOs? Even those started by hams
who deliberately do that just because they don't like the bulletins?

4768. July 4 Special Event Station

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-02 00:00:00 UTC
From: geoff@nntp.cadence.com
Message-ID: <DtxMMF.6D6@Cadence.COM>
Source record: 221791
Cross-posted to: scruz.events,rec.radio.amateur.misc

On July 4, the Santa Cruz County Amateur Radio Club will operate a special event station at Wilder Ranch State Park. You will be able to work us on 40 meter or 20 meter phone, depending on band conditions. Local hams will be able to reach us at or near 146.55 MHz as well. We will be on the air from approximately 10:00 AM to 4:00 PM (17:00 to 23:00 UTC).

This is a opportunity to receive a QSL card from K6BJ. After we have logged your contact, send a self-addressed stamped envelope with your call sign to:

SCCARC - QSL
P. O. Box 238
Santa Cruz, CA 95061

Local hams can call on the K6BJ 2-meter repeater (146.79 MHz, PL 94.8) to verify frequencies, however repeater contacts will not be logged.

Activities at Wilder Ranch, in addition to a demonstration of amateur radio, include crafts, square dancing, music, food, and games. Wilder Ranch State Park is located two miles north of the Santa Cruz city limits on Highway 1.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 02/2330Z JULY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 02 JULY AND FORECAST FOR 03 JULY - 05 JULY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 01 Jul
Daily Proton Fluence >1 MeV: 4.0E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 2.3E+05 (normal)
X-ray background: A1.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
03 Jul 04 Jul 05 Jul
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 03 Jul: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 01 Jul
Learmonth 5 2212 1221
Fredericksburg 8 9
Planetary 7 7

Observed Kp for 01 Jul: 1100 2233

2B. MAGNETIC FORECAST
Date Ap Conditions
03 Jul 8 Quiet to unsettled
04 Jul 5 Quiet
05 Jul 5 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
02 Jul Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
03 Jul Normal Normal Normal
04 Jul Normal Normal Normal
05 Jul Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
02 Jul 18

Observed Australian Regional MUFs:
Darwin: Near predicted monthly values, with spread F
observed during the period 1300-1500UT.
Townsville: Up to 30% enhanced for the period
1000-2000UT, otherwise near predicted monthly values.
Sydney: 15% enhanced during the period 0300-0500UT,
otherwise near predicted monthly values, with spread F
observed during the period 1000-1600UT.
Hobart: Near predicted monthly values, with sporadic
E observed during local night.

Predicted Monthly T index for July: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
03 Jul 15 near predicted monthly values
04 Jul 10 near predicted monthly values
05 Jul 10 near predicted monthly values

What I would like to know is whats that secret equipment they have covered up with the white sheet in the last issue???? Seen in upper corner of room. Some sort of Contest winning "Classified Equipment"?? Maybe unsafe for Little Pistols to know about.

Let us know we probably need one too. Tom WB6IQD

4773. SCOUTING Ham Radio

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-02 00:00:00 UTC
